> What did I screw up?

It makes a difference if the circuit in question is a parallel or series
circuit. The equations you used are correct for a series connection of a
resistor and an inductance. For a parallel connection the equation is
different.

For a parallel connection of X and R you get:

Z=1/[(1/R)+(1/X*i)] where i=sqrt(-1) and X=2*Pi*F*L

Z=[(R*X^2)/(X^2+R^2)]+i*[(R^2*X)/(X^2+R^2)]

Now the part multiplied by "i" is the equivalent inductive reactance (Xeq)
of the parallel circuit, and the remaining part is the equivalent resistive
(Req) part.

The Q is still calculated by X/R, but in the parallel case it is Xeq/Req,
which yields
R/X, for the paralleled inductive reactance and resistance.

You can also look up the above equation (#15) in the 1999 ARRL HB on page 13.5.

Good luck on your exam!

Sorry, but that isn't true.

The military recently bought a lot of morse code tutors from a
manufacturer, and at the present time I'm working on a PA especially
to boost the output of a back-pack digital transmitter so the
operators can switch to CW!

Yep, CW is right in the specs.

Now that doesn't mean we should be required to learn morse code in
case we have a little war, but it does prove the people who use
arguments like those above often state what they "think" is going on.
Of course that isn't necessarily what is really going on.

CW is a very reliable mode for exchanging information when other modes
won't make it through, and doesn't require a lot of supporting
hardware.

Like doing math with a pencil and paper, it will always have a place.
Especially if the amount of power and equipment available is very
limited, and communications is important.

The only problem I have with the amateur exams, and how the exams have
been changing, is how they are m,ore and more becoming a test of
memory and not actual knowledge.

The people who "just can't get the time or skill" and are waiting for
a free ticket have a right to enjoy the dumbing down (thanks partially
to Kenwood, who should have been excluded from input into amateur

affairs because they have a profit motivation).

But they should just keep one thing in mind.... many eight year olds (and younger) can obtain the highest class ticket under the present "testing".

The problem with amateur radio slacking off isn't the testing, it is a social change. We could give the tickets away like the ones received by filling in the forms that came in a CB radio box in the 60's, and we still won't get a bunch of new hams.

The only thing any of this will do is let the people who are too lazy to study upgrade. A lot of people will move up in class, but you can bet there won't be any great increase in numbers after a little initial surge.

This is a free pass to an Extra or General, and has nothing to do with fixing the social problem of people not being interested in how things work, working, or radio communications.

If anyone thinks this is a plus for all of us, they probably should think again.

You seem to be laboring under the delusion that you are "uncovering"
some kind of "secrets," and that the lurid claims made about me on
the anti-American sites you quote are some kind of "revelation."

The plain fact of the matter is that my views on race and other
issues which so enrage the "politically correct" are not
substantially different from those of the founding fathers. In fact,
they were the mainstream views of most Americans until the
subversion of this country really got underway in the 1960s.

As far as you bringing (false) statements about my little children
into your "moral" crusade, I think it's highly inappropriate.

If you thought about them at all, you'd think about possible
consequences to them before posting, and you might even have checked
the court's orders, which, to put it mildly, do not support the
picture you have tried to paint.

>

What you posted was not my material. Even the parts which were
alleged "quotes" were interlarded with alterations and additions,
and there appeared to be nearly as many ellipses as there were

sentences. That I call deception; and that I do call swill.

If you want to read my writings, all of them are accessible through
my website, and the links there. Go there and find them. They are
all freely available.

> >
> >What caused you to suddenly hit the ceiling, Joe?
>
> "hit the c\\eiieling?" I think not.
[...]

The evidence suggests otherwise. Even your hands seem to be shaking.
Four cut-and-paste marathon posts in one day? Yes, I think you've
become quite emotional about this.

>
> >
> >You are displaying a remarkable degree of hysteria for a being
> >presumably not equipped with a uterus.
>
> And here we have an attack on women.
> Apparently Mr. Strom dislikes and stereotypes women just as he does folks of
> races and religions different from his own.
[...]

Nonsense. I like women very much indeed, and sometimes I wonder why
they put up with us males. A flower needs a pistil and a stamen, and
men and women are indispensable incommensurables. When a woman acts
like a woman, nothing is wrong. But when a man acts the way you did,
it is worthy of remark.

I think you have a great deal of emotion invested in the idea that
"racism" is some kind of "evil." You probably actually believe you
are "fighting" for "good," and naively swallow the media whopper
that any person who wishes his race to survive is secretly waiting
to initiate a mass slaughter.

I'm broad-minded enough to see that same kind of mentality operating
sometimes on my own side of the political spectrum: the
"right-winger" who instantly dismisses the ideas and person of a
leftist because "well, he's a socialist and probably a commie!" and
must therefore be motivated by unmitigated "evil," and could not
possibly have anything worthwhile to say on any issue whatever. Some
rightists would be willing to believe almost any accusation against
such a person, even that he performs Satanic rituals in his basement
every Friday. He's been demonized.

And the billionaire media elite and their elected employees have
done their best to demonize those who agree with the founding
fathers on racial matters.

I got much more intelligent discourse from the Black nationalists at the Black-run Pacifica Radio Network station where I was a consulting engineer a few years ago.

I got along quite well with them, by the way, and I hope you won't think me anti-White if I observe that their view of the world impressed me as far more realistic than yours.

Pip pip,

Kevin, WB4AIO.

I see your point, but you are too bothered about your pride. In a way, you are being as selfish as the criminals. Look at the whole picture. Because of personal (misplaced?) pride leading to guns being commonplace, your fellow citizens live in a country with (so I read) 9000 gun murders per year, compared to the UK's 30. Everyone has a 9000/120 greater chance of being shot so that you can maintain your self-confidence.
Give up the gun and have the courage to take the risk of being robbed by force majeure, (which shouldn't harm your pride at all - if an elephant treads on my foot, it doesn't make me feel small) so that the community in general will be safer.

If so, there still wouldn't be a code test.

To give a serious answer, I think we can compare to the way the
Internet developed. My first Internet-ready computer had a keyboard
and a modem. A microphone - for things like Internet Phone - didn't
get added until later, when technology developed sufficiently to
support it. I think the same would be the case in your scenario,
eventually the desire to communicate with one's own voice would win
out and those HTs would start getting speakers and microphones added,
in one form or another, just as our computers have.

The community will be safer for criminals, not for me and my family.
You see, many of the murders in this country are criminals murdering
criminals, a benefit for the community in general.

Numerous studies show that states with less gun control have less
crime. 9000 killed out of 250 million, figure out the percentages
there. How many crimes have been prevented by gun owners? Lot's, you
just never hear about it.
16,000 people(so I hear) were killed by Drunk drivers, yet you can buy
alcohol in almost every petrol station. Those that turn their guns into
plowshares will plow for those that don't. Remember WW2? American guns
and firepower saved UK (so I hear) from sure domination from the Nazi's.
At least with having a gun I may have a slight chance of protecting
myself and others from harm, there's NOTHING I can do to protect myself
from a Drunk driver. Trot on down to the local pub and have a Guiness
and think about it. Plow on, Limey!
(sorry about the off topic post, I just couldn't help it!)

No, Steve, not "taking full responsibility for the FCC decision" ... just
being happy and gratified that the results are amost 100% in line with
what we recommended in our various comments. Many others were
also responsible for the outcome by their efforts in filing comments
as well. NCI's Board of Directors are proud to have been involved
in helping to affect the outcome in a positive and progressive way.

The FCC (and particularly the WTB staff who worked on this item)
are to be highly commended for doing a thorough job of evaluating
the comments and the situation in the ARS and making a decision
which is in the public interest and goes a long way towards
stimulating the kind of growth and progress which the ARS needs
to move into the future as a healthy service.

Nick,

I think suggesting people who take pride in acomplishments should
simply forge their acomplishments to save work is a very poor
suggestion.

I can't imagine why that would make anyone feel good about themselves.

>While scalding, that was very well said Nick. I indend to get my license
>someday. This is a very VERY new interest of mine, and I go into this
>interest late in life at the ripe old age of 26. I'm going to be taking

>remarks while scalding, are well said...

Since you think Nick spoke the truth, Does that mean you intend to
forge a license, as Nick suggested?

This all seems very strange to me. No wonder its so difficult to find
skilled help today. I'll have to check closer and see if the
credentials are forged or real. I had no idea this was going on.

See? Now you get to the real point, which is that you think this is a
joust. You pompous baffoon. OH, by the way...you want to know what
phonetics I use on the air for this vulgar callsign? With adults and if
I feel they will find the humor in it, I use "two in tow"

Lumpy! We've never communed, but I used to subscribe to the APRS group. Anyway, good to "see" you again! Oh, on ham radio, a kid won't hear the word "tit" at least from me...I used my callsign, W-5-T-I-T. IF no big deal is made over it, it goes right over the heads of even adults...that's the "neat" thing about it!

You did not say if your planning for FM or SSB action on six. Six
meter FM can be worked effectively with the standard vertical whip, and
the suggestions of the others are alright.

However if you are interested in SSB Id recommend a horizontal
antenna. This will allow both "skip" and "local" chatting. Back in
the "old days" the Saturn 6 was the antenna of choice. Now I'd
recommend the M2 system.

Hello,

I have been in the RC hobby since the escapement / galloping ghost days
and I agree with what you say concerning the differences in some of the
attitudes towards the beginner by some people in the ARS vs RC. That being
said, I should point out that for RC, a license of any kind was never
needed, (except for a Class C CB license in the early days if you RC
transmitter ran over 100 milliwats, and I guess at the very beginnings of
the hobby when an amateur radio license was needed), but not in the last
25 years or do. In the ARS, there was always a sort of Caste system of
licensing. I was first licensed as a Novice 35 years ago and immediatly
ran into what you are talking about, and it continues unabated today.
The culture of the ARS is very different than the culture of the RC hobby.

You're starting to lose me on this, Dave. I wasn't the one doing the
crowing.

I think you certainly did. You started throwing terms like "old fart"
to describe those who don't agree with your perspective on things.

> Maybe I should have just said "Bigot". Look up the definition, and then

If I don't think the FCC's move was a good one and that simply does not
make me a bigot. It makes me someone with a very different opinion than
yours. Oh...what "truth" are we discussing?

> > > There's a difference between "liking" someone, and tolerating someone.

I see it as you have 2 choices. Accept, tolerate, and
> understand, or stick your head in the sand and be miseable. Which will
> it be?

Hell, Dave--I have many more choices than that. I do understand. I
don't accept. I'm not sticking my head in the sand and I'm certainly
not miserable. See, I don't have to go by your list.

> As to liking me or not, that is your choice as well. I certainly won't

You don't seem to understand how things work. I not obliged to tolerate
you. I can respond to your posts as I'm doing now. As to my opinion
vs. your opinion--I like mine.

I'm beginning to see a pattern here. If my view doesn't coincide with
yours, it's narrow, huh? You've used a bit too many metaphors for me.
As I understand it, you're a messenger for something or other and your
vision is of things swimming, walking and quacking which are not
chickens. This is starting to read like the book of Revelations.

> Whether or not someone "throws in the towel" or not is their own choice.

> over it, move on, or move out. Simple as that.

You're right. Getting out of amateur radio is an individual's own
decision to make. I certainly don't feel that many will take such
drastic action. If your inferiority complex doesn't allow you to
coexist with those who don't share your opinion, don't expect others to
vacate the bands just to salve your feelings. You see, no one is
required to move on or move out.

Thanks for permitting me to stay. I don't know if I'll be able to
contain myself as far as the preaching if the guy designing the
algorithms is a lid on the air.

Anchildas must be some new Mexican dish with anchovies. I don't
question whether anyone will be a real ham. If an individual passes 5
wpm and the written exams, there'll be no doubt that the person is as
real as hams are ever going to get these days. What matters to me is
that person's on-air practice.

> obsolete things. At some point, the rules have to change to track with
> improvements in technology.

Oh, B.S.! CW was and is a viable and popular mode. It is still in wide use on the amateur bands. It doesn't matter a bit whether anyone in commercial services use it. We aren't commercial ops. Anyone whose license permits the use of CW should not have a problem demonstrating some skill in its use.

At some point, we have to acknowlege that
> morse telegraphy is just as old and obsolete as horses and buggies. So
> at what point do we finally stop testing for it?

A good point would be when its use is neglible. We aren't even close to that point yet.

Do we dogmatically
> continue to test for CW into the 24th century when people are Star
> Trekking around the galaxy?

I don't think it'll matter a bit to either of us.

No one is demanding "easier access" to ham
> radio, just access that is more in line with the technology of TODAY.

That is an outright falsehood.

> You can give me the toughest theory exam that is relevant and I'll study
> for and pass it, because that is what is required TODAY.

Me too--and I'll pass a code test to boot.

> I am a man of principles. I just couldn't see the relavance of CW.

...and because the light never dawned for you personally, CW was, in your eyes, irrelevant.

> I refused to allocate slots of my precious time, to learning a skill that

> it's here. All I can say is "it's about time!"

Don't give me no jive about your "precious time". If you found time to study the theory, you could have nailed the code. I'd hate to think

that I wasted eighteen years of something I wanted in order to wait for
a "gimme".

> It's unfortunate that the FCC didn't revamp the theory tests. They are

The local HRO in Silicon Valley is cleaned out of all but the tech
license study guides. The guy at the store said they sold out in
a few days after the R&O came out. Looks like a lot of upgrading
is going to happen. And the VEC sessions will be crouded.

You see, Mr. Strom, it's known as "demagoguery," from the word "demagogue" -- one who stirs up people using emotion, prejudice, and so forth in order to win them over quickly and thereby gain power for himself.

When I was a young fellow growing up in deep south Mississippi in the late 1940's and early 1950's, life there was not much changed from the days of slavery. Local politicians stayed in office by yelling "N*****, n*****, n*****" from the back of a flatbed truck. My former governor (I moved to Alabama) George Wallace was more sophisticated but the message was the same.

I have witnessed the vacuous nature of appeals to racism, most strikingly when:

1. At age 10, accompanying my grandfather hunting, we came upon the burned remains of a black man who had been tortured then burned to death for some minor transgression -- an act that was not rare in the South of those days.
2. At age 20, as a college student in Alabama, after I had participated in the last portion of the Selma to Montgomery march, where I shook hands with Rosa Parks and Martin Luther King, Jr., I -- and a few friends -- were threatened with expulsion from our college by a dean. He lost.
3. In 1969 - 70, in the jungles of Vietnam, I saw American boys -- white, black, Protestant, Jewish, rich, poor -- lose arms, legs, eyes, and their young lives -- without questioning what they were doing or why. When I put them -- or parts of them -- in body bags, the only color visible was blood red. Of course, you, sir, having never put your life on the line for anything would know nothing about that.

Thus, Mr. Strom, your nice, neat, apparently carefully reasoned and researched arguments are no different from the ravings of the redneck candidates for sheriff whom I heard on those red dirt woods in the Mississippi backwoods in 1951. It's all the noise of a demagogue who wants to be heard but wants to never be questioned because he knows that the light of day will drive out the darkness that he preaches.

If, sir, you find my comments troubling or testy, that is your problem. Demagogues inspire the pitiful Tim McVeighs of the world to sacrifice themselves but the demagogue never gets his own hands dirty. Why not? Because have another characteristic in common: they are cowards.

There are some cold hard pragmatic elements in the mix which support
the ongoing use of cw, Ed. Phone band overcrowding and behavior
issues, it's far less expensive to get on HF with cw than with ssb
assuming qrp is acceptable to the individual which seems to
increasingly be the case, the bottom-line superior communications
effectiveness of cw over ssb particularly under poor/marginal condx,
etc.
>
Dunno about anybody else in this NG but the only reason I greatly
prefer HF cw to phone is because cw is 'way more **effective** and
reliable for long-haul comms. I don't "love" cw, that's silly. I do cw
simply because it works better on HF for amateur purposes and for no
other reason. Jiggling code tests and Part 97 has no relationship at
all with applied physics, in the end it's the realities of the KISS
theory and physics which inevitably prevails.

QUOTE

Q&A: Inside the Alliance

A former insider speaks

For four years, Kirsten Kaiser, 36, lived with her husband on or near the West Virginia compound of William Pierce, the leader of the neo-Nazi National Alliance and author of the racist fantasy novel The Turner Diaries. Kaiser was married to Kevin Alfred Strom, who co-hosts Pierce's racist and anti-Semitic radio show and is one of Pierce's closest associates. In that role, she got to know Pierce's inner circle and some of its members' thinking. Over the nine years of her marriage, Kaiser came to question the violently racist views of the Alliance -- especially after the deaths of 19 children in the Oklahoma City bombing, which was patterned on an attack portrayed in The Turner Diaries. Today, she is living in Minnesota and going through a divorce from Strom. The Intelligence Report interviewed Kaiser about her life and acquaintances inside the Alliance, and how she came to leave.

INTELLIGENCE REPORT: How did you first hear of the National Alliance?

KAISER: I first heard about it in 1986 through reading magazines which my second husband, Joseph McLaughlin, had. I remember initially I was really shocked. I had noticed that Joseph didn't seem to like Democrats or Republicans, and I asked him, "What are you anyway?" He said he was a [white] nationalist, that when he was 17 years old he had run away from home and gone to Iceland so he could be around other nationalists.

IR: What was your first contact with William Pierce?

KAISER: Joseph had me call Dr. Pierce one day in the summer of 1987. It was the day that [former Nazi leader] Rudolph Hess died. Joseph was all excited about this and they were all saying that it was a plot, a murder conspiracy.

IR: What did you say to Pierce?

KAISER: I said that I'd been reading his magazines. And he said, 'You know, I'm really going to have to have you meet Kevin Strom. I know you'll just love him.' I didn't meet Kevin until about four months later, on Nov. 7, 1987, when he came to our house in Arlington [Va.], but I really did like him a lot. I fell in love with him, but I didn't see him again until January 1988.

I was still married to Joseph at that time, but Kevin was starting to introduce me to people. I really wanted to meet people. I was very alone, very isolated.

They were all in this radical movement and they talked about radical things and it was very mysterious and fun and interesting. I had never met anybody like this. In the meantime, the situation with Joseph was getting worse. On March 15, 1988, I left. Kevin helped me move, and he moved into the apartment that I got.

IR: How had Kevin gotten into the movement?

KAISER: It turns out that Kevin's high school government teacher in Fairfax, Va., was a fascist who kind of recruited him into all this. He pointed him to the John Birch Society. Kevin was never involved in the Klan. He is the big intellectual -- we continuously made fun of the Klan. But he did read literature like Instauration [a relatively highbrow racist publication] and corresponded with people like Jared Taylor [who runs a magazine called American Renaissance and has argued that blacks are less intelligent than whites].

IR: When did you first meet Pierce in person?

KAISER: A little before that, at the very end of 1987. Joseph and Kevin and I all met Dr. Pierce at a restaurant in Arlington. I had just finished reading The Turner Diaries, which I thought was very poorly written, and I think I told him so, which may be part of the reason why he dislikes me so much. He said that he had written it very fast and that he was very surprised at how popular it had become. He said that he had always intended to rewrite it and make it better, but that he liked it real well.

IR: Do you think Pierce was serious about the message of the book [which depicts a race war set off by the protagonist's bombing of the FBI headquarters building]?

KAISER: Yes. That first night we met, I remember that he said that if they didn't blow up the FBI soon, it would become impossible because technology was getting better and better.

I used to drive past the Pentagon and other government buildings every day, and I never gave them a second thought until he started pointing out that there was this big sinister thing going on, that they were ultimately out to get me and Joseph personally, particularly because now we knew the truth that no one was supposed to know.

IR: How was Pierce treated that night?

KAISER: Everybody has always treated Dr. Pierce with tremendous reverence. Nobody calls Dr. Pierce "Bill." Even his wife calls him Dr. Pierce.

IR: And how did Pierce act toward you?

KAISER: Dr. Pierce said, "You're just a housewife," and I was so shocked and hurt. I had just got done reading his whole magazine, the National Vanguard magazine, which had a picture of Venus de Milo on the cover and went on and on about how women should be at home having children. I thought, "If that's what they think, why did he just say that to me?" It really hurt and confused me. It never made any sense.

Dr. Pierce doesn't like women. He told me later that he likes them in a James Bond sense. Those were his favorite movies, James Bond movies. In those movies, women are just sort of fun toys, and that is really how he sees them.

Once, Dr. Pierce showed me some mail-order bride catalogs after his third wife, Olga, left him for three or four months. They were just unbelievable. You pick up a catalog that's full of these women and almost every last one of them is named Eva. It was always eastern European women, from Czechoslovakia, Yugoslavia, Russia.

((NOTE: Perhaps this explains Mr. Strom's comments in an earlier post about hysteria and women. And perhaps it explains the photographs on women on his web site -- including a photo of the Venus de Milo.))

IR: After this initial meeting, I understand you stayed in touch with Pierce while you lived in Virginia and, later, in Maryland. When did you and Kevin finally move to Pierce's compound [on 346 acres outside Hillsboro, W. Va.]?

KAISER: We moved on to his land on Oct. 1, 1991, and stayed there in a little trailer until Sept. 3 of 1992. After that, we moved to an apartment above a truck garage in Hillsboro, and Kevin continued working for Dr. Pierce until 1995.

IR: What was it like living on Pierce's land?

KAISER: By the time we moved off the land, I had pretty much had it with the whole bunch of them. I listened to all these speeches about how this was a community and we were going to work together, and it wasn't that way at all. These people never even bothered to say hello and good-bye. They didn't have dinner together, hardly ever, and they didn't have any celebrations together.

There was no discussion between people about what they were doing and how it connected to what other people were doing. The only one who really knew what was going on was Dr. Pierce, and he wasn't telling anybody anything they didn't need to know.

Nobody drinks there. Drinking is absolutely forbidden. And watching television was not allowed -- even though Dr. Pierce watched the news every night, which I remember ended up getting some people angry.

It was a station you could hardly see. It was more like listening to the news. You know, Dr. Pierce has extremely poor eyesight because he once kept his contact lenses in for two solid weeks and that damaged his eyes. He is supposed to be such a smart man, but he doesn't have any common sense at all.

They never did really like me there, and I think another one of the reasons was because I said, "If I'm going to work, you're going to have to pay me something because my time is valuable." They just thought that was unheard of. Everyone works for Dr. Pierce, if not for nothing, then virtually nothing. The people who were paid basically got about $300 a month. Dr. Pierce is very, very stingy in many ways.

IR: How seriously do you think Pierce took his own propaganda?

KAISER: Well, he told me that he had done his dissertation on how to build a nuclear bomb. And he made it very clear that when the time came, he would know what to do. He was really very serious about his desire to destroy Israel. It's not so much that they want to destroy the American government; Israel is what they really hated.

They are waiting for when the economic system collapses because this will help instigate a race war. During this time of unrest, they would take over the armories, take control of the government and bomb Israel. I mean, this is what he plans to do. I guess he's going to rule the world once this happens.

I really do think it's a version of The Turner Diaries.

IR: What about Hunter [the novel that Pierce wrote in 1989, after The Turner Diaries, that describes a campaign of assassinations of interracial couples]?

KAISER: Whatever book he was working would be his enthusiasm of the moment. When Hunter came out, that was the way it was going to happen. If enough mixed-race couples were assassinated in a big flurry, that would be enough to wake people up to action.

That book disturbed me. How can you judge somebody else in matters of the heart? If you really did fall in love with somebody of another race, I don't know if I could judge you. This is something I had a real problem with.

IR: How did events in the outside world affect Pierce's people?

KAISER: They were just delighted that Saddam Hussein was attacking Israel. Another thing that delighted them was when they had those riots in Los Angeles. They want the white man to hate the black. They hoped that when social unrest got so bad that a race war started, that would give us the chance to blow up all these buildings and to get hold of an armory.

You know, wherever you went, you always knew where the armories were. Whenever we were traveling, it was like, "Well, where is the armory?"

IR: What kind of work did you do while you lived on Pierce's land?

KAISER: I did many mailings. I stuffed hundreds and hundreds of envelopes and inventoried books and did a number of other things. But I only did that for Kevin's benefit -- not Dr. Pierce's. As I said, I'd told him that he had to pay me something.

Dr. Pierce also had us making burial tubes [to be used for caching weapons underground]. They were made out of big PVC [plastic] tubes and we would seal the ends with these caps and special tape so that they would be waterproof. As many as we'd make, they'd sell. We'd make 10 to 20 at a time, and they were already sold.

IR: So it was a moneymaking operation for the Alliance?

KAISER: Yes, it was almost pure profit.

IR: What was the reaction when the Southern Poverty Law Center sued Pierce? [Editor's note: After a black sailor was murdered in 1991 by a member of the neo-Nazi Church of the Creator (COTC), Center attorneys sued on behalf of the victim's family and won a $1 million judgment against the COTC. In 1995, after the COTC fraudulently transferred ownership of its North Carolina headquarters to Pierce to keep it from the murdered man's family, the Center sued Pierce personally and won an $85,000 judgment. That judgment was upheld in July by a federal appeals court. The Supreme Court refused to reconsider it.]

KAISER: I remember very well Dr. Pierce making many trips to North Carolina and originally it was a very mysterious thing. After a while, he said that it was very hush-hush, but that it had to do with Ben Klassen [the long-time COTC leader who committed suicide on Aug. 6, 1993].

This all started when [former COTC activist] Will Williams started getting involved. He was like a liaison. After some time, Kevin came to me and said, "Oh no, it is finally happening. [Center co-founder] Morris Dees is suing us." It was like the end of the world. He was terrified of Morris Dees. Kevin just hated him. He said, "Once Morris Dees has set his sights on you, that's it, it's over." They were really upset.

IR: What was Williams' role over the years he was in West Virginia?

KAISER: His title was recruiting coordinator. He came in late 1991 or early 1992, and I thought he was very friendly, really a nice guy, initially. He traveled a lot, and Dr. Pierce paid for his travel. He took over the farm house [on Pierce's land], and put a new roof on it and built a fence around it. He started raising German shepherds there. He had an obsession with German shepherds. By the time he left, he had 17 of them.

Six or eight months after Will arrived, he went to Russia and married a woman he'd been corresponding with and brought her back. She lasted just a few weeks and then she disappeared. Will was very upset. He just changed completely. This was at the same time that Harold Covington [leader of the National Socialist White People's Party] started attacking Will Williams, saying he was an FBI agent and a homosexual.

All these people are really, really paranoid. They all watch each other, and they're all convinced that everybody else is an FBI agent. For a while, there was even talk that Dr. Pierce was an FBI agent. He just laughed about that.

Anyway, Will Williams left in 1993, or possibly 1994.

IR: How did the standoffs at Ruby Ridge and Waco [in 1992 and 1993] affect the National Alliance?

KAISER: We heard about Randy Weaver [the white supremacist whose wife and son were killed by federal agents at Ruby Ridge, Idaho] long before anybody else did. Kevin was telling me every day it is just a matter of time before they come to get us. We have to be ready. We're stockpiling food and I'm keeping distilled water hidden around the house, and I'm getting more and more afraid.

After Waco, Kevin was always forcing me to watch this [antigovernment] video called Waco: The Big Lie [by Indianapolis attorney and militia advocate Linda Thompson, who once threatened an armed march on Washington, D.C.]. I am so full of fear that I don't know what is going to happen, and I don't trust Dr. Pierce. I am beginning to realize that there is something wrong with everybody I know in the movement. Nobody has a regular job, nobody has a regular [non-mail-order] wife. They don't have girlfriends, they don't have cars that work, they don't have any health insurance. They don't have a real life.

I am beginning to say to Kevin, "We have just got to leave, we have got to have a normal life." And he says, "What's a normal life?"

IR: What about the Oklahoma City bombing?

KAISER: The day after the [April 19, 1995] bombing, Kevin got really nervous. He went through the house and found all his old Voice of Tomorrow stuff. [VOT was a mobile, far-right pirate radio station that Strom ran out of a specially equipped van before meeting Kaiser.] I had never seen him so scared. We put a box of the stuff in the back of the car and we drove to the back of a Wal-Mart in Virginia, I think, and dumped it.

Later, Kevin told me that Timothy McVeigh had called the Alliance five minutes before the bomb went off and that somehow the FBI knew. But he said McVeigh must have called a lot of other right-wing groups, too. He also said, "You know, the reason why they were all upset is because the bomb was just like the one talked about in the book." Everyone knew what book he was talking about [The Turner Diaries].

I had befriended a lot of local people in West Virginia, and after Oklahoma, a good friend came to me and said, "You know, Kirsten, you better watch your kids. If they get a chance the local people are going to kill your kids, because a lot of kids were killed in Oklahoma." I look outside my window and there are all these reporters. My heart is racing and I am just petrified. This is real. These are all real reporters, people dressed up in suits with cameras and microphones. I'm not making this up.

IR: How were you affected by all this personally?

KAISER: By this time, I had realized that the idea of a revolution was ridiculous. If these people can't hold down a regular job, what makes you think they can run a country?

Kevin told me that the bombing was a good thing, because it was a government building and that government employees had been killed. It was a part of the revolution. I called my brother and my brother said, "Yeah, well what about all those kids that were killed?" Kevin said to me, "Well, if there were children killed, they must have been the children of government employees and it will teach them all a lesson." This was retribution for what happened in Waco.

After I got through with this conversation with my brother, something began to grow in me. It was like this little seed. My brother works for the Coast Guard, which means the government, so Kevin was saying that he deserved to be killed. It took a little while for that to sink in on me.

I became so depressed after the bombing. The whole idea that they really think it's okay for children to be killed was starting to bother me.

IR: So you began to think about leaving West Virginia?

KAISER: At about this time, Kevin and Dr. Pierce were having a disagreement. I was happy because I was thinking Kevin was finally going to say we could leave. I wanted to go to Minnesota. One day, he came home with a magazine saying Rochester [Minn.] was supposed to be the best place in America to live. It was either 96 percent or 97 percent white, so it was acceptable for that reason. We moved there in November of 1995.

I don't know if anyone can relate to this except maybe a prisoner of war, but when we left I was able to listen to regular radio broadcasts. I hadn't heard Paul Harvey in years. I didn't know that O.J. Simpson had apparently killed his wife. Kevin hadn't allowed us to watch television or read the newspapers because they promote multiculturalism. Driving across country, we were stopping at gas stations and I could see newspapers with today's date on them. There were TVs in the hotel rooms. It was really weird.

IR: How was Rochester once you got there?

KAISER: I got a job as a real estate salesperson. I had a lot of fun, but I felt a sense of shame for the first time because when people asked, I couldn't say what my husband did. At the same time, I couldn't go to office parties, various social things, because Kevin didn't like being around people. And I couldn't go alone because that would mean getting a baby-sitter, and we couldn't have a baby-sitter because they'd be in the house and then they would know who we were.

The fact that I had to name my baby daughter Klara -- Klara was Hitler's mother's name -- was also starting to bother me. This whole deal with Hitler was really starting to bother me.

IR: When did it all come to a head for you?

KAISER: On Nov. 13, 1996, we were listening to the radio to hear the weather report. They were talking about some young couple in New Jersey that had hidden the fact that the girl was pregnant. They killed their baby after she gave birth in a hotel room.

I just started crying, and Kevin got mad at me. He said, "Why are you crying?" And I said, "They killed a baby. They killed a baby." I�m looking at my own baby, who is three or four weeks old, and I am just freaking out. And then Kevin said that it was a good thing that it happened, because the woman was a Jew and the man was a Gentile.

I was thinking several thoughts at the same time. How could he know the woman was a Jew? And it occurred to me, for the first time, that it actually didn�t matter what race the child was. It was a little baby. I just kept envisioning that happening to my baby, and I couldn�t stop crying. I curled up into a ball in the corner and held on to the baby. I wouldn�t let her go, and I couldn�t stop crying.

Eventually, I went to see a counselor. He told me that it was a good thing that I was upset, that everyone should be upset when they hear things like that. He said that all children were all part of our family. That is what he said.

In his office, I picked up an old magazine with pictures of the Oklahoma bombing. I screwed up my courage and I read the articles and I looked at the pictures. I was thinking that this child being held by a fireman doesn�t look any different than my son, Oskar, and it�s covered with blood. And that whole idea, that there really isn�t any difference, that children are children, all came to me. It all came together on that date.

Here's a list of the values in the test pool questions on Q from f, L, r:

Q f L r
1.84 3.6 43 1.8k
0.25 3.6 42 1.8k
32.2 3.6 3 2.2k
39 7.125 12.6 22k
2.73 7.125 8.2 1k
0.221 7.125 10.1 100
31.9 14.225 3.5 10k
0.136 4.468 47 180
43 14.128 4.7 18k
75.1 14.128 2.7 18k

where f is MHz, L in uH, and r ohms.

Can't get these to be consistant with Q = (2pi f L)/r

Yes you are a head above my friend, don't let the naysayers bedraggle you. You have accomplished
something they can't and they will wail and thrash and hate you for it. Congratulations my friend. You have something no one can take away from you. Bravo, good job, and have fun on the
bands.

Push the 1/x button on the calculator.

In a parallel resonant RLC circuit, Q gets larger as the resistance
gets larger. I think you've got the equation upside down.

Why should it not be a problem, clearly an untrue statement
since after all I have a license that permits the use of CW, and yet I
personalyhave no such skill. The claim you are making here has not
been true for at least 9-10 years now. I expect it was not true for
some before that even. That is I firmly belive that even when it was a
requirement for license holders that there were many that could not
domtrate that skill.

As to popularity, it would seem that jamming profanity are
also popular in parts of the ARSm should we all be required to prove
our skill at those to

IYO. in mine and others a much better point is when it ceases
to serve a function whereby the prupose of the ARS is clearly advanced
by making all operators of certain prevelges donstrate that they might
have some skill, which is the current level of testing for Code

OTH it's use is neglible in the scheme of things, which is
where we come to issue of everyone else is doing. Morse Code use is
negilble in the world of Radio alone. It is the third or fourth most
popular mode in the ARS as a whole (behind FM SSB, and the digital
modes combined) It is number two in HAM HF, but a poor thrid to AM
and SSB, in HF as a whole. It remians the number one mode in CW
operattions without regard to the band they are in however.

Sir I for one am turely sorry that you were forced to waste 18
years of your life on anything. I futher assure that were it within my

power I would undo that for you. That you were treated in unjustly was and remains a tragedy for the yourself and the ARS. I and other see no reason however to contiue an injustice simply on the basis of your suffering. That "logic" would have meant that the US should never have freed its black slaves in order to prevent their ancestors lives and suffering from being wasted.

In adittion your assertion that having time to learn the theory is enough to also learn the code is plain false do you turely not know that?

I am in the market for an inside window mount (stick-on type) antenna
for use on a train window since thwy won't let me place on on the
outside of their train.

I once saw a dual band (144-440) flex one made by a german company but
am not able to find it in any outlet (HRO etc.).

Any information would be appreciated.

So what? Are you interested in collecting licenses, or are you interested in radio? If you're interested in radio, then your license is just as valuable as your radio skills, no more and no less. If you're interested in licenses, then, I dunno, take-up fishing. You can get a license from every state!

Here's my angle: I am looking at the person, not the paper. I guess that I'm too old-fashioned, eh?

> And it is still true that the value something has, to its owner, is
> directly proportional to how much effort one had to expend to get it.

Congratulations! You have identified the problem: The man is obsessing on "getting it". Getting what? A piece of PAPER. Forget the piece of paper. What matters is the knowledge, the experience, the fun. Paper is made from dead wood.

Gitback, of course, all of our opinions count equally, the purpose of the NG. Please don't sully this basic right by confusing it with UPL, the unauthorized practice of law. Don't we have enough folks trying to muzzle us? (I am not a licensed lawyer, am retired and have no wish to advocate in a Courtroom.)

Compliments on your legal mind: You went right to the heart of the issue with your post. True, I was not there and cannot speak to the ultimate truth of the proposition.

I do know , however, as a matter of law, the burden shouldn't be on Rich to go to trial on that turkey issue. He should be able to issue an Affidavit with the salient points of refutation. Then, unless he's found in perjury, the matter should be set straight. That is the way it happens with everyone else in our system.

Rich should be accorded every right that we all enjoy. Demonizing him doesn't change it either.

Rick caught you on that one, Mark. The people who don't turn
in their guns would not be law abiding citizens, by definition.

Hammer007, wow, that is a big jump: I'm championing racism. Please understand that I'm not advocating the truth or falsify of Rich's evidence--nor his behavior.

I'm championing procedure. The Supreme Court has wisely held that: "The connerstone of liberty is procedure." In this light, Rich is entitled to be properly noticed if there is a complaining party.

Golly, according to your logic, those fellow hams that called me "a drug addict" for taking prescription drugs, reference above by Gitback, should be summarily punished, ha, ha. Actually, I happen to believe their opinions expressed on ham radio, protected free speech, because there was no attempt to hide the context.

You see, when it comes down to defending our rights, we are all entitled to the strictest procedure. Why is it that lawyers spend untold time authenticating evidence yet we're suppose to convict Rich on untold charges of hearsay. And the fact that members of Congress have such a taped evidence in hand justifies throwing the book at him without allowing authentication and defense. Since when has justice become a political issue?

Licenses are not degrees. They are no more than permits. Thier value
should be nominal. You should evaluate an individual ham by his/her
actions, not by his/her license. Besides, one doesn't really need to be
a "tech whiz" to be on air. But for those that are "tech whiz's", well
congratulations. If "tech whiz's" are looking for paper recognition
(which is silly in my view), then perhaps a note or something could be
atached to his/her license -- however, there is no need for assigning
radio permissions based on this.

> Dave

Regardless of how long it takes to study for the ham exam, the exam should nonetheless be relevant to the requirements of operating ham radio. That is, while the exam should take into consideration requirements, it should not place too much emphasis on those things that are merely desirable.

Hey Butch: If you would quit ranting and raving for a few minutes and take a deep breath I will ask you a question: What do you think amatuer radio is? It is amatuers, not professionals.....I happen to be both, and amatuer operator and a professional radio and television technician, broadcaster and photographer. I am 47 years old and have had an interest in this hobby since I was 12. It was then that my dad and I built a heathkit gr-64 shortwave receiver and I got bit by this bug. I tried to learn code then, and by then I mean when there was NO, no code tests for anything. As a novice you got 2 meter phone privledges and very limited cw on hf. Technician was 6 meters and above, and you had to do 5wpm. I could send, just couldn't quite get the receive down. I went through the air force technical schools for electronics and radio repair. I furthered my education with a degree from the national radio institute. I was then and am now more than technically qualified to hold ANY amatuer license. You will be distressed to know that i only hold a technician license, and I only got it in April. After 35 years of wanting to an amatuer, having already made it to the professional level, I found out when the test was being given,, took a few practice exams from hamtest.com and walked in with my money and out with my certificate of completion. I could not have done that without the knowledge and experience I have as a professional. So why don't you just get a grip on reality. Tell you what.....when I pass my general exam after april, I will stay out of your cw way, if you keep your dam cw pounding fingers off my hf ssb.
73's to you anyway, my fellow amatuer.
Jon KG4DIR (and dam proud of it after waiting this long to get it) and "one of them"

CECIL, have you noticed these bleeding heart anti-gunners ALWAYS *assume* those evil CRIMINALS will ALSO eagerly march right up to abandon THEIR weapons alongside their intended victims? WHY are the anti's so stupid, naive and steadfast in their blue-sky "vision" that the bad guys will as eagerly embrace and observe disarmament as those they PREY on for a living...

Even a hunter would be FAR less inclined to stalk a deer, if it had the capability to shoot back!

I was thinking of so-called 'mainland UK' as my example.
The Maze is in Ulster and there is or hopefully was a minor war in
Ulster. Of the two factions, the one regards itself as fighting a war of
liberation - and the other as fighting a war in defence of its homeland.
Mainland UK' might be called a 'gunless society'. I cite this region as
an example. Not in order to score 'Brownie points' for any Nation I
hasten to add, but just as an example of such a society for comparison
purposes.

> and security" - even as YOUR country was and did before your war with

> Germany.

All countries have their own interpretation of History. One extreme view
of WW2 (and WW1) is of the decadent states of Europe getting into their
usual mess and the USA philanthropically coming in to sort it all out
for them. Another is that the UK and allies such as Australia and Canada
to name only two were left alone for nearly three years on both
occasions to take the whole load of maintaining balance of power whilst
the USA remained a spectator.
Both are simplistic, but its useful to be aware that the people of
different
nations hold sincere but different opinions about the same facts -
although
sometimes the facts are not allowed them.

European forces are at present in Bosnia and Kosovo. Russia regards its
campaign in Chechnya (or whatever its called) as a police action.
British and many other nations' forces were involved in Korea and Iraq,
Australians, South Koreans and others in Viet Nam, Nigerians in a
neighbouring West African country recently, British in the Falkland
Islands. All 'policing actions'. The burden is not just carried by the
US, although she carries the major part as the biggest player.

> It's absolutely NO surprise to me that the IRA and its

> followers resist British efforts to disarm them

Its no surprise to me either. The surprise is that some of them seem to
have the good sense to actually do it.

> - I sincerely hope they NEVER fall for the BS about trading "freedom and
> self defense for

> 'security'"

> God help US, if WE are EVER so blind and stupid as to consider so fall

> for such a "trade"!

There must be limits on an individual's freedom, otherwise he will
infringe
another's freedom. The art is to optimise and compromise.
Self defence it is hoped and promised will be provided by other methods
than guns.

>

> YOU are entirely free to be as helpless before your government and

> others who would do you harm as you choose - you are NOT even SLIGHTLY

> free to force US to do the same - and THAT statement applies to ALL,

> both in and out of our nation's boundries. It took bloodshed to

> ESTABLISH that right in 1776 - and it may well be necessary to do so

> again under similar circumstances - let NO criminal, tyrant or foreign

> power EVER assume the citizens of this country will meekly roll over

> in the face of threats or physical abuse - we ARE willing and able to

> defend ourselvs - both as individuals AND as a nation. Don't EVER

> forget it!

My gut reaction to the story of the confiscation of equipment was one

of dismay. It certainly does not seem in keeping with the principles

of free speech and freedom of information. I admire the US freedom of

information laws very much. Also your personal determination not to be
pushed around, which I share. It's just the methods for minimising
oppression that we disagree on.
I hope you will take my comments as a useful reflection from an
interested
external observer. What happens in the States is of interest to and
affects
all of the world's peoples.

Peter, the comments regarding violent crime in the UK come from Scotland Yard's statistical pages - at least they were available a year or so ago when I last made comparisons. You are right, MANY in the UK are as shocked as YOU are when they are exposed to figures supplied by their OWN local law enforcement agency - they, and others in the world merely ASSUME that the reduced number of weapons in the UK (or ANY place where citizens are disarmed) *MUST* result in less violence, rape, muggings and similer - they are WRONG! A year or so ago when my numbers were obtained, the UK was also pretty much the world leader in car theft - ahead of the USA even, and I thought OURS was pretty outrageous!

I appreciate the apparent open-mindedness and restraint in your posted comments here - we may disagree, but need not be abusive about it.

Regards

Only if you can change all human nature and behavior. Here across the pond, our Supreme Court has ruled on several occasions that the local police forces are not in place to protect any individual at all, only society as a whole. They are not at all legally responsibile for the safety of you and your family. Who then protects you, your home and family. The answer should be fairly obvious. That is the basic reason for our Seconed Amendment to the Constitution.

Self defense is a basic tenent of our culture, our religion, and our political system. Indeed, if a mandatory gun law were passed, all law abiding citizens would turn them in. Just like the IRA, our criminals would not. Then they would have an unarmed citizenry to attack. Janet Reno could create a Waco again whenever and wherever she wants too, without fear of citizen resistance. Guns are fun for hunting (I love quail hunting with my over/under 12 Ga.) but the reason for the Second Amendment has nothing to do with hunting, but our personal liberties and protection. Those that do not wish to protect themselves through gun ownership and training may do so. Many of us choose to exercise that constititional option though. I don't see it going away anytime soon.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

As a licensed Radio Amateur for over 36 years, and a long time member
of the ARRL, I offer the following opinion regarding the forthcoming
license restructuring;
Although I am 110% in favor of the CW requirement, I recognize that
it, in itself, is not a measure of a good Amateur Radio operator.
But, there seems to have been an unfortunate trend in the ease by
which a license is obtained. Reducing the CW requirement is another
step in permitting less effort for more privelege. Furthermore, there
is little doubt that the VE examination system is of questionable
integrity. Friends are cut breaks, to outright corruption. Sure,
there are some honorable VE's, perhaps most are. But anyone looking
to obtain a license can get one as easy as getting a parking ticket,
if he just know the right people. To argue this is simply denial of
the facts.
The emphasis seems to be "swell the ranks", not improve the ranks.
Make it easier so we have more, don't care about quality, just
quantity. Sell more radios, perhaps? No doubt, the Big 3
manufacturers are happy with this philosophy.
Anything you get for nothing has no value. Think about it and you
will know this is true. Anything requiring effort and truly earned,
will be honored, respected, and nurtured. Why do we implement policy
that will degrade the value of a license? Why not, just once, make it
something difficult, something earned, something valueable?
I no longer believe that the ARRL is promoting this hobby in a manner
which will cause me to be proud to be a Ham. I do believe, that in a
very short period of time, Ham Radio will become a vast wasteland,
where no one with any intelligence will wish to associate.

I do not think that many really understand how much the
ham community does for their local law enforcement.

Our local hams provided ATV (television) links so that the
State Police could monitor the activities of demonstrators
at a local KKK rally.

Will White <kd7bfx@mindspring.com> wrote ...
: In the Phoenix area, hams have aided the County Sheriff's office and
: several municipal PDs in DFing unauthorized jammers and harrassers using
: police frequencies. The aid has come at the specific and initial request
: of the agencies, who were frustrated by the FCC, which put off
: investigating the problem for many months.

Sir,
Radio Shack makes a dual suction-cup BNC ant mount. cat no 20-022. Just
add your ant. - I use the rubber duckie from my bc 245. Works well for me.

> what qualifies a radio as meeting this standard. Any ideas?

The statement above really doesn't say much. MIL STD 810 has a variety of procedures and 'curves' which specifically define a particular test, and some procedures are much more severe than others. Unless the manufacturer tells you specifically which procedure and curve they meet, the claim is essentially meaningless.

For example, I make a product which has a moderate resistance to vibration (but not the ruggedness you'd need to mount it in a tank or helicopter). Specifically, this product is tested to MIL STD 810x, Section 514.2, Procedure VII, and Curve V. Test vibration levels are:

Freq Excitation
5-5.5 Hz 1.0 inch double amplitude displacement
5.5-200 Hz 1.5g peak acceleration
Sweep Time: 5-200-5 Hz in 12 minutes
Duration: 1 hour for each axis (vertical and side-to-side)

This equipment is intended for use/transportation in stationary installations, fixed wing aircraft, and rubber-tired vehicle applications. It would likely fail in more strenuous uses, such as in a tank where more shock and vibration might occur.

Other procedures in MIL STD 810x call for different (both lower and higher) intensities of testing. Unless the advertising calls out a specific procedure and curve, the advertising is meaningless.

Hello,

I originally purchased the equipment below for an amateur radio project, but I lost interest in pursuing the project. If anyone else would like to try their hand, or whatever, please be my guest. Phones are in good working condition far as I can tell. Would like to sell everything as a package. Serious offers considered.
TERMS: Prepayment by postal money order, prices include UPS ground shipping or USPS Insured where applicable. I will also consider trades for Motorola Star-Tac accessories such as a Motorola Star-Tac Desktop Charger(s), high capacity Lithium-Ion batteries (black), etc.

(1) DiamondTel Mesa 90X, in very good condition, with tabletop phone/spare battery charger, two standard NiMh batteries, car adapter, and instruction manual ..... $ 40.00

(1) Motorola "Flip Fone", lt. gray. This phone is in good condition with standard battery and tabletop phone/spare battery charger ..... $ 25.00

I also have the following accessories:

(2) used antennas, one "back of the set" antenna and a "window" portable, both rubber ducks ..... $ 5.00

(1) used battery eliminator for the DiamondTel 90X ..... $ 5.00

(1) Brand New in the package battery eliminator for the DiamondTel Mesa 90X ..... $ 10.00

(1) Brand New in the package 6V NiMh Lt. Gray battery for Motorola "Flip Fones", Micro-Tac, etc. ..... $ 10.00

(5) Brand New in the package 6V NiMh Black batteries for Motorola "Flip Fones", Micro-Tac, Flare, Elite, etc. .....(EACH)$ 10.00

(3) Brand New in the package NiMh batteries for DiamondTel (EACH)$ 10.00

If interested, please e-mail directly n3fvg@worldlynx.net Thank You

1495. Who's the Intruder on 14150 kHz ??

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-10 00:00:00 UTC
From: bg998@FreeNet.Carleton.CA
Message-ID: <85dfpv$9rm$1@freenet9.carleton.ca>
Source record: 122198

Who owns the signal that's been blocking 14150 kHz for the last several days? Signal consists of clicking or chirping noises on 14150.1, interspersed with a brief (1 sec long) AM carrier on 14150.0 that has a two-tone "courtesy beep" (or similar) near the end of it.

Somebody said it was coming over the pole but at my QTH (near Ottawa, Ontario) it arrives from the West on my 4-el monobander. A friend near Edmonton, Alberta receives it from the ESE. According to my map, that puts the transmitter somewhere near Chicago, or just west of there.

Someone else suggested it was the reborn Hellschreiber signal, but I don't think so - it's too irregular. And it goes on and on for hours.

Can someone from the Chicago area get a bearing on the signal, if they aren't in the 'no sig' skip zone??

... Martin VE3OAT

Mike, take a chill pill. Hams are NOT a progressive, techno-weenie bunch... but don't pay any attention to me, I'm just a new kid licensed at age 16 in 1963 and always amazed at how few other hams ever built or repaired any of their own gear. Hams, as with other humanoids, resent change in any form.When the Novice license was first introduced, even with only a 1-year non renewable license term, it caused howls of protest from many existing hams. In my time, I have seen the Conditional license come and go, the Tech license changed to limited HF (10-meter SSB and Novice HF CW) privileges, Novices extended to 220 phone and 10 Meter SSB and renewable licenses, with similar howls of protest and ads "Selling OUT, Novices and Techs BAH HUMBUG", etc. In reality the dreaded CB'ers have provided more skilled and reliable operators, during the CB heyday of the 1970's, than probably any other source of ham operators. Without them ham radio would have dwindled much more quickly than otherwise. Without the recent (10 or so years ago) influx of new Codeless Tech hams, we olde farts would have almost nobody left to talk to on the radio, storebought or otherwise, by now.
I've read the FCC enforcement lists in QST since first licensed, and the great majority of raging interference, license revocations for profanity, jamming, and other undesirable behavior, come not from new hams but from Advanced and Extra Class licensees. I'm over 50 now and still feel like a kid when attending hamfests and club meetings full of white haired, wheelchair bound, aged hams. My hair is getting ever whiter, and I hope that you go ahead with your interest in ham radio, and that others like you get into ham radio in spite of some of the weirdos you'll run into. All hobbies have loud weirdos, so don't worry too much about ours.
Jim W5AOX

Nice monologue, but you might as well be reciting it to a houseplant,
or sending it via CW to a no-code! :)

You missed the boat. You're too late. Life has passed you by. The
decision has been made, and your letter is in vain. Move on.

And no, I don't care if code is, or is not.

Stop whining about what you _think_ will happen. Most often, it does
not. The ARS needs to concentrate on what it _has_, not what the
individual is pouting for. It like, "Oh, God, I see a change;
therefore, the world is ending." or "Everybody think like me, and join
me in my paranoia."

Grow up, be constructive, OR be part of _The Problem_. It's _your_
choice.

Perfidious:

Ham radio is a hobby regulated by the United States Govt., with the Federal Communications Commission as the enforcing agency. Because of that, the amateur radio hobby is bound to the Code of Federal Regulations, CFR Part 97, Title 47. Within that code is the "Basis & Principle" of amateur radio, which would be akin to a corporation's "Statement of Purpose."

Included in our "Basis & Principle" is the following:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:

(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

We are often called upon by our local emergency services to provide help with searching for a missing child, help with public safety issues as they relate to parades and other community service events, help with search & rescue, as well as many other public/community service events. Perhaps you are familiar with the service of REACT in the old CB days. An organization named RACES is also active in ham radio and is governed by guidelines set forth from FEMA.

All of the above is provided by ham radio operators without regard to monetary reimbursement, or ANY form of reimbursement in any way. I think you can recognize the value amateur radio, along with CB radio and REACT, provides to our communities in times of need.

I have been directly involved with public service groups, even organizing public service groups here in my area. I will never forget one story relayed to me by a ham who is a member of SATERN (Salvation Army hams) from during the Oklahoma City Federal Building bombing. A cellular phone company there immediately made 100 cellular phones available to emergency officials working that disaster scene. Almost as quickly as they were handed out, the cellular phone company pleaded for everyone to stop using them--the heavy use had shut down there systems. Ham radio operators provided the backbone of emergency communications in that disaster.

I don't want you to think that I have been preaching to you. It is not my intention that you think that; it is only my thought that perhaps you

weren't aware of why we do what we do.

: I hope you are all correct.
:
: I love CW, it's all I use, and I will be sorry to see it go as a
requirement
: (if it ever does). If CW doesn't make a difference, will someone tell me
: what it is that keeps the bands from sounding like 11 meters? I have seen
: them (bands) through about 24 years of change, but for as bad as they seem
: today, they are nothing compared to 11. Why?

Respect and enforcement of the rules. Hams are more law abiding
than CBers. Thus we report on our own. And now we have FCC
support.

: Sure there are people who Bash book and garbage in garbage out throught
the
: classes, but even most of them retain something. In fact it still takes
: more effort to cram for an exam than it does to go down to Radio Shack and
: buy a citizens band radio.
:
: It might be said that the caliber of person who can at least crack a book
: and memorize or take some time to learn the code might be just a littler
: higher than those who can't even read. Education of any sort will always
: produce a better idividual.
:
: So I hope you are all correct. I hope the code doesn't make a difference,
: because once the precidence is set to do away with it, any type of theory
is
: next. Then what will the difference between the amateur and citizen's
radio
: services be?

Source record: 122209

: WELFARE WHINERS Q& A - Vol. #1
:
: "How easy are the current code tests?"
: They have been passed by 4-year-olds, 84-year-olds, Boy Scouts, Girl
: Scouts, Cub Scouts, and Campfire Girls.

The technical part is still very hard. And the number of
questions will increase.

: "What is 'No Code International'?"
: A handful of laceybritches whiny CBers who want to take over ham radio,
: who have been humiliated, shown up and shut down by 4-year-olds,
: 84-year-olds, Boy Scouts, Girl Scouts, Cub Scouts, and Campfire Girls.

How? Hams believe in the law thus we report those who
violate it. Self enforcement is our many key to keeping
the Lids out, not tests.

: "What is 'ARRL'?"
: The Asian Radio Retailer's Lobby, a magazine publishing house that
: thinks they own ham radio and who will whore off true ham radio as they
: see fit to preserve their incomes and their name badges.

Most American trained Electrical Engineers, I am a Purdue grad,
do not want to do consumer electronics. That is why the Asians
are so big in this market. No American company wants to touch
it. Besides Hams are such cheap bastards (worst than lawyers)
that most retailers hate them.

: "I don't know code."
: Then, of course, you are NO HAM.
:
: "But I don't want to learn code!"
: Then you will remain NO HAM.
:
: "But I can't pass the code test!"
: Then you don't qualify for a ham license.
:
: "But I shouldn't have to learn the code because I don't want to use it!"
:
: Then you're just a CBer.

CBers, like all commercials licensees, take no tests. Hams are
tested on technical and legal issues. Most hams are more informed
on the law than are most gun owners.

: "But I have a "no-code technician license!"
: Then you are a CBer on 2-meter CB.
:
: "But I have a call sign!"
: So do CBers.
:
: "But 'ALL HAMS ARE EQUAL'!!"
: You've been sitting out in the sun too long.
:
: "But Morse code is old fashioned!"
: Not as old fashioned as using your VOCAL CORDS.
:
: "But the military...!"
: Ham radio is not "the military."

Most pro code types have a romantic feeling towards
the code. It is the romance of the lone operator who
saves the day, the skilled individual. In many ways this
is much the same type of individualism we see in the
gun community. Often those on the right just do not
know how to play well with others.

: "But the Internet... !"
: Ham radio is not "the Internet."
:
: "But it's the "digital age!"
: Then learn the difference between "OFF" and "ON" and you can learn the
: code.

The code is too slow for modern military activities. However, the Army
still has morse intercept operators (98H). The world moves too fast.

: "But there are 'good people being kept out by the code requirement'."
: See phenomenon #3 and #4 of the Anti-coder profile at
: http://www.freeyellow.com/members5/cw-forever
:
: "But so-and-so has a ham license and he thinks that the code test should
: be dropped."
: See phenomenon #1 through #8 of the Anti-coder Profile at
: http://www.freeyellow.com/members5/cw-forever
:
: "But so-and-so has a ham license and he thinks that the code test speeds
: should be reduced."
: See phenomenon #1 through #8 of the Anti-coder Profile at
: http://www.freeyellow.com/members5/cw-forever
:
: "But so-and-so has a ham license and he is an "ex-CBer," and he thinks
: that the code should be dropped!"
: Then so-and-so is still just a CBer who merely wants "revised CB."
: See phenomenon #1 through #8 of the Anti-coder Profile at
: http://www.freeyellow.com/members5/cw-forever
:

: "But I HAVE A RIGHT...!"
: NO YOU DON'T.

Ham radio is a privilege. Thus the government can and does
set the requirements. If it was a right then there would be no
requirements.

Right on!
I once had a lot of respect for the hobbt and the amateurs who had
attained amateur extra,no more,for two reasons.
1.I got my own extra in 7 months with no prior code or electronic
knowledge and only a high school ed.IT'S ALREADY TOO EASY!

2.This further dumbing down is just more of the same,politicaly correct
radio,t-ball of the airwaves,nobody loses no matter how little effort
they put in.

At least now my dog can get a license.

Responding to K2TL:
The time for disagreement with restructuring, reduction of CW speed requirements, etc was when the matter was being considered by the FCC, last year. That time is gone now, and it's time for all of us to pull together to make restructuring work for everyone. Sure there's problems in the VEC system, we need to work on that, integrity is essential to maintaining respect, but for every rotten apple there's a hundred good ones, not the other way around. If we know of specific problems, we need to get that information to the proper authorities so action can be taken. Then we need to let them do their jobs.
Instead of tearing the system down and being devisive, we should all now be looking for ways to support the system and make it work. We all had our chance to voice dissent...no doubt you expressed yours as I did mine....but no decision the FCC could have made would have made everyone happy. The decision has now been made, and we should accept it like responsible citizens and get back to work.
No offense, K2TL, but your protest message and dire predictions can only do harm now, and divide us further. This issue has done some damage already to the ham brother/sisterhood in this country, and your help is needed, along with every serious ham, to heal that rift.
"Ham Radio doomed"...??? Only if you and I let it happen, my friend. In each of several instances over the years when there were major changes made, some well-intentioned hams predicted the demise of Ham Radio.... but...it hasn't happened yet. Somehow I think we'll all muddle through this one too. 73, K1MER

That seems to be what the FCC found also, although a case might be made that a proficient CW op might be a more disciplined operator by virtue of the fact that it often takes a discilpined course of study and practice to become
a good CW op. I personally feel that the FCC went too far with easing the CW requirement, having no problem with a 5 WPM General, but having many problems with a 5 WPM Advanced and Extra, but that is just my opinion. On the other hand, examples abound on the bands today where hams who have passed the 13 or 20 WPM requirement who are not in the least bit "good Amateur Radio ops". I have also been a ham for almost 36 years and have come to realize that, to a large extent, the operating practices on the ham bands tend to reflect society as a whole. It is interesting to read old QST articles, letters, and editorials from any time period in their history to see refferences to poor operators on the bands, although tough CW and techincal exams have been passed.

> But, there seems to have been an unfortunate trend in the ease by
> which a license is obtained. Reducing the CW requirement is another
> step in permitting less effort for more privelege.

This point was argued when controversey existed about the Class C license (taken by mail) and at the inception of the Novice and Technician classes in the early 50s. Some would argue that the standard has gone down since the inception of formal Amateur Radio licensing itself. The trick is to find some point in the realm of testing where most hams can agree that the standard is neither too high or low, and I don't think that is an obtainable goal. I certainly would support increasing the level of the technical testing elements.

> Furthermore, there
> is little doubt that the VE examination system is of questionable
> integrity. Friends are cut breaks, to outright corruption. Sure,
> there are some honorable VE's, perhaps most are.

It is unfortunate that the FCC got away from doing the testing, but I do not think we will ever see that return again. Unfortunately, we read too much in QST about VEC testing fraud, and it is possible that this might just be the tip of the iceberg.

> But anyone looking
> to obtain a license can get one as easy as getting a parking ticket,
> if he just know the right people. To argue this is simply denial of
> the facts.

Maybe if the FCC has enough prosecutions and fines for testing fraud. this would not be an issue. Of course, it has always been an issue in the past with the Class C, Novice, and old Technician licenses. At least with the Novice back then it was one year up or out.

> The emphasis seems to be "swell the ranks", not improve the ranks.
> Make it easier so we have more, don't care about quality, just
> quantity.

This started in earnest with the advant of the codless Tech license and IMHO was a direct response by the ARRL to perceived threats to valuable VHF spectrum. Remember, that was the time when spectrun austions began to be discussed openly. I will always believe that the codless Tech license was no more than an attempt to quickly license a standing army of operators on VHF and UHF and above bands where existing "coded operators" did not populate to any great extent and really did not care about those allocations.

>Sell more radios, perhaps? No doubt, the Big 3
> manufacturers are happy with this philosophy.

Remember what happened in the wake of incentive licensing in the late 60s and early 70s. A good argument could be made that Amateur Radio was at its weakest point then. Equipment sales plummeted, most of the US manufacturers went out of the ham radio business, and license growth flattened out for a time. There were other economic pressures that came into play at the time also, but I thnk there was somewhat of a cause and effect relationship then. I tend to believe that to a certain point, keeping the radio manufacturers in business is
a good thing for Amateur Radio in general

> Anything you get for nothing has no value. Think about it and you
> will know this is true. Anything requiring effort and truly earned,
> will be honored, respected, and nurtured.

A great many examples exist in our society that validates this.

>Why do we implement policy
> that will degrade the value of a license? Why not, just once, make it
> something difficult, something earned, something valueable?

I think this is because the FCC as an institution really believes that the ARS is really not a service anymore. The trained pool of competent operators always reffered to in the past really meant competent CW

operators, and there is no longer a need for that.

> I no longer believe that the ARRL is promoting this hobby in a manner
> which will cause me to be proud to be a Ham. I do believe, that in a
> very short period of time, Ham Radio will become a vast wasteland,
> where no one with any intelligence will wish to associate.

I have to disagree here. Good people will still be attracted to the ARS and find their own areas of interest. We will still continue to have the great CW ops, the weak signal guys, the leading edge digital people, and the master builders. Amateur Radio always has been what you make it. The opportunities have not diminished. The ARRL is doing what it has to do. The Demographics of the ARS
are really freightening to look at from a marketers point of view.

For the ARRL to even exist, it takes membership, and advertising revenue. It is true that the "core" ARRL support, in terms of license classes represented on its membership roles contain an over penetration of Advanced, Extra class, and to some extent General class licensees, but..... this probably would have not sustained the organization into a future where the ARS was increasingly dominated by the Techinician class licensee, who, as a whole, did not join the ARRL. If I were on the ARRL board, I would be concerned that new people coming into the ARS at reduced licensing standards might follow the Technician model, and not be joiners, maybe because of perceived "fit in" problems with older hams who passed the test when the test was a test. In the end, it is up to us, the ones who have been there and done that, to lend a helping hand to any newcomer to the ARS regardless of what test they took, and how well they can copy code.

> K2TL

I have a real nice car. It drives like a dream. It's good on gas. It's
really nice-looking, too. I worked hard to get it. It cost me a lot of
hard-earned money. But yesterday my neighbor was given a car just like
mine. So now I guess I have to hate my car. It no longer has any value
to me, because if my friend can get one for "free", and go out and
drive the roads same as me, well that's just not fair. He shouldn't be
allowed to have that car unless he worked just as hard for it as I did
for mine. With him driving the roads, all the fun of it is gone for me.
My car just looks ugly to me now. So long car, guess I'll just walk.

No offense, K2TL, but your reasoning is lost on me. How about taking a
little more positive view? With your years of experience, you can make
a big difference in the way things turn out. You can be a force for
helping the upcoming youngsters be better hams, learn how to do things
the right way, you can be an example and a teacher. You and I have both
been in this game 35+ years...we used to call them "elmers", didn't we?
We don't have to let Ham Radio slip away, let's do something positive.
Let's start by talking positive, not negative. Let's work with the hand
we've been dealt, like we have for all these years, and make it work.

Your short time is here.

Welcome to ham radio-set your watch back 40 years

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics
Amateur call South Dennis, Ma. (Cape Cod)
K1OIK Bacteria-the only culture most hams have

You didn't take away anything, but the FCC sure did!

It's typical for those who dislike working for something and who
expect handouts to not understand why some people have pride in what
they accomplished.

With that in mind, I understand why you agree with the suggestion
people just forge documents that are symbols of what they accomplished
in life.

But I think picking on a guy who is proud he worked for something is a
sign of just how bad our society is getting. Socialism at it's finest!

Well put. I might also add that most hospitals installed VHF antennas and 2 meter radios in anticipation of Y2K related communications problems.

For those folks who didn't set their RC-85's, etc. to 1971 before the Y2K
rollover, there is a code that you need to send the controller to get back
the features you lost. I don't have it here at work, but it was given many
times on the ACC Repeater Controller mailing list. I set my RC-850 and 85's
etc. to 1971 before the rollover and all is well...

Actually Rick, if you read the writings of Jefferson and other framers
the second admendant was to keep the Government in-line. They saw how in
Europe, if only the government had guns, then they could oppress the
people.
I believe one quote of Jefferson was :
"The foundations of freedom are built with the blood of tyrants and
patriots alike."
He fully expected for a revolution to happen every so often because he
knew that the government would eventually grow strong enough to control
by force.

This was also how history was taught 20-30 years ago before it was
rewritten to be "politically correct."

Such a law would turn many thousands of presently law-abiding citizens
into criminals. Just another victimless crime law to have to deal with.
When Australia banned guns, the hardware stores immediately sold out
of 8-10 inch PVC pipe. Wonder what all that pipe was used for?

Bill must be suffering from some drug induced state of mind. Just the other day Bill was quarming George W4FQF, and did not have the guts to use his callsign. Bill was a frequent quarmer himself in the days of " PORKBUTT I LOVE YOU SO ". One of the best days of amateur radio was when N1GJT and K2ECA were patting WB2OTK on the back for being on the air in defiance of the FCC sanctions for OTK to stay off the air. You would have though Jerry and Bill had married OTK and were awaiting the wedding night.. I still laugh so hard that I almost relieve myself .

If listening to and/or operating on 3950 and 14313 causes brain damage,
then how do you explain WB9CIK's deranged behavior on 7258 kHz LSB? Sounds
like Riley hasn't been spending enough time monitoring 40 meters.

Boo hoo, poor whining baby. Cry me a river. I suppose you want a
picture of me to have homosexual fantasies when Donna's trolling the
truck stops. From the looks of your picture, you look like a beached
WHALE. Your ruddy skin complexion and the gayboy tattoo really make
people's stomach turn. It looks like there's quite a bit of grey in
your receding hairline. Guess it's from the years of substance abuse.
Oh, and Voltaire, "wreaked" is defined as 1. to carry out or inflict,
as vengeance. 2. to give full expression to, as one's rage. So, don't
use words that you don't know what they mean.

> I guess that is what happens when your mother is your sister.

No, that's what happened in the O'Brien "family."

>Move out of your mother's house and get a job, jerk.

Poor deluded fool. No wonder you have such a poor credit record.
How many times now do you have late payments?

>Is'nt 40 years at home wth mommy enough?

My, my, what's "wth?" Your "education" must not have included English.
Prove I've lived "at home" for 40 years, dumbass. I thought so.
Oh, and in the next picture you submit a picture, digitally erase the
cockroaches on the walls in the picture.
And Jimmy, Riley's already been told the truth about how you went on a
frequency with an ongoing QSO by some spanish-speaking stations and
called CQ for 1/2 an hour or so.

I didn't understand him to say he was proud of the paper and ink, I
understood him to say he was proud of his efforts.

I'm not sure what the politically correct view of people who take
pride in acheiving goals through work is today. It may have changed to
the point where being proud of accomplishments is consider a flaw.

My opinion is probably out of date, at least according to the Ted
Kennedy school of water rescue standards. But I think he has every
right to place value on what he has earned.

IMO, suggesting someone forge credentials to be "proud" is shameful.

But do not prove a cause and effect relationship. New York and D.C. have
many
other peculiar features beside gun control.

> 9000 killed out of 250 million, figure out the percentages there.

approximately ONE HUNDRED times the UK percentage.

> How many crimes have been prevented by gun owners? Lot's, you
> just never hear about it.

A lot seem to get through the net. How many are CAUSED by gun owners, or
the public acceptance of guns?

> 16,000 people(so I hear) were killed by Drunk drivers,

500 road deaths per annum in UK attributable to alcohol. Approx 1/8th
of US rate allowing for population.

> yet you can buy
> alcohol in almost every petrol station.

Not in UK AFAIK. Although you can buy matches, which is probably rather
silly.

> Those that turn their guns into
> plowshares will plow for those that don't.

I'm not advocating disarming the army, navy and air-force. I pay them to
protect me having to become a ploughman for a foreigner.
My vote, a free press and media and the good sense of my fellow citizens
hopefully protects me from home-grown domination.

> Remember WW2? American guns and firepower saved UK (so I hear) from sure > domination
from the Nazi's.

I do remember WW2. I spent many a night in an air-raid shelter in 1939,
1940, 1941, 1942.
WW2's got nothing to do with habitually carrying guns in peacetime.
BTW there is an alternative viewpoint on the war - namely that the UK by
its dogged persistence and then the USSR by its fanatical and successful
resistance saved the USA, which seemed to be a bit laggardly in getting
involved, from eventual possible Nazi/Japanese domination.

The USA sold armaments to Britain in both world wars before coming in
herself - probably many millionaires were made - but don't get me wrong,
we were truly grateful.

> At least with having a gun I may have a slight chance of protecting
> myself and others from harm,

You carrying a gun also makes it more likely HE will also carry a gun,
and he might decide to shoot me instead of you. I appreciate your
protection
but if the other guy didn't have a gun in the first place I wouldn't
need it.

> there's NOTHING I can do to protect myself
> from a Drunk driver.

Seat belts, air bags, reinforced passenger compartment,
energy absorbent front-ends, drink-driving laws, gaol,
Routine police checks, breath tests,
changing public mindset re drinking and driving.

Tom, Excellent post.

The fact remains that the only "testing" within amateur radio that takes real work is the CW element 1B and 1C. The written exams are, by and large, easily memorized and passed. The CW exam, on the other hand, requires real actual knowledge and skill, not studying a manual and barfing up the multiple choice answer without understanding the theory behind it. Most americans are too damn "fat and happy" to understand this work issue. Everyone is looking for an "easy way" out of real work. From high school kids who cant read to extra class hams who can't do CW at 5WPM and memorize test answers. It's the same fundamental problem. Heck, My 3 year old can memorize things now and is already learning CW. Do I see a 4 year old with an Extra Class ticket? And to think, the bulk of the ham population is 45-65 years old. Pretty pathetic.

No lids ... No kids ... No Space Kadets. Class A operators ONLY!

K7JOE/20 (designating holding a real 20WPM extra class ticket who can send and receive CW at 20+WPM without a doctors note).

after
> WW2. and the prospect of getting shot here never enters one's
mind.]

More involved in worrying aboud being mugged, robbed or beat up by
attackers?

> As you probably know, the police strongly resist being armed because
> they believe that
> then the criminals will become armed in response and the situation
will
> escalate.

YOU mean like in your high-security prison, the "Maze", where a year
or so ago, a couple of inmates gunned down another? Please explain
exactly HOW that happen in a "gunless society" - much LESS a top
security *prison*!

The majority of crime seems to be formalised at an implicitly
> agreed level of violence and discomfort to both sides. My
neighbour's
> rather disturbed 15 yr old son might scribble minor abuse in the ice
on
> my car windscreen, but I feel reasonably secure that he won't shoot
me.
> Using a gun means stepping outside the norms into dangerous
territory -
> and so
> is relatively rare.

A pity your robberies, muggings and similar incidents (at greater
frequency per capita then that of the USA) aren't NEARLY as "rare"!
Could it be because your criminals KNOW it's highly unlikely their
English victims will resist - by force of arms or otherwise?

>
> However, once a norm where guns are carried as an everyday habit has
> become established, I can see that it will be very difficult to
alter,
> since neither side wants to disarm first.

You mean like your own government's experience with the IRA? Possibly more in THIS country would be more inclined to less gun ownership - IF we could disarm criminals and politicians FIRST! Sometimes it's REAL hard to tell one from the other...

> Perhaps you might agree that as a long-term goal, eventual
disarmament
> of
> everybody, in every community or nation might be a worth-while aim?
> (I hope this has not come over as anti your great country, because
my
> attitude is quite the reverse. If the USA did not exist, the world
would
> have to invent it.)

YOU mean so *our* armed young men and women can play "police force for the world", and continue to be relied upon to travel the world when needed at the expense of OUR taxpayers, to offer up THEIR lives if required, to defend the "sheeple" of far away countries who DID permit themselves to be disarmed by their governments. "for their own safety and security" - even as YOUR country was and did before your war with Germany. It's absolutely NO surprise to me that the IRA and its followers resist British efforts to disarm them - I sincerely hope they NEVER fall for the BS about trading "freedom and self defense for 'security'"

God help US, if WE are EVER so blind and stupid as to consider so fall for such a "trade"!

YOU are entirely free to be as helpless before your government and others who would do you harm as you choose - you are NOT even SLIGHTLY free to force US to do the same - and THAT statement applies to ALL, both in and out of our nation's boundries. It took bloodshed to ESTABLISH that right in 1776 - and it may well be necessary to do so again under similar circumstances - let NO criminal, tyrant or foreign power EVER assume the citizens of this country will meekly roll over in the face of threats or physical abuse - we ARE willing and able to defend ourselvs - both as individuals AND as a nation. Don't EVER forget it!

I see a lot of HT's nowadays (including my IC-Q7A) that are advertised as "Meeting MIL STD 810 C/D/E for shock/vibration" Although I know this means it's built strong and rugged, I've always wondered exactly what qualifies a radio as meeting this standard. Any ideas?

Thanks

Jimmy

Hey! You've just described very accurately what all the
Novextras will have after April 15!! Good work!

1550. Should have been Advice on HF Verticals (all)

I would appreciate input from anyone using or has used vertical antennae on HF. Brand, experience with, assembly etc would be appreciated.

e-mail replies appreciated.

A what to work on on?

I've worked on many HT220s, couldn't be easier to work on, clean straight forward circuits, exceptional performance. These old crystal controlled radios make a mockery of "modern" synthesized radios. A HT220 with its 45 to 50 db signal to noise ratio really sounds good compare to todays synthesized radios with maybe 30 db S/N ratio.

Oh well, the price for progress..

Sifting through the babble, I find a couple of items I was able to
decipher. You seem to be making a case that one does not necessarily
have to be literate to use morse code. I beg to differ.

I'm not sure about knowing one when I have one but I know one when I see
one. I don't believe I can comuncate much of anything to you. Your
receiver doesn't appear to be on and your transmissions are garbled.
As to getting "the reverse" from a NoCoder", I shudder to think what
that might mean.

Please point to where I stated that it is possible to learn morse in
zero time, Mark. I agree with your statement that learning morse in the
same time as the theory is not impossible.

Folks, this restructuring stuff has made for a thoroughly-enjoyable flame war, but let's keep it out of the homebrew NG, OK? This is one of the few NGs unpolluted by all the pro/anti-CW rhetoric.

The guy asked a reasonable question that indicated that he wasn't just memorizing the question pool, but wanted to understand the material. I don't see where he's going wrong myself, and I hold an honest-to-God flameproof 13-WPM Advanced ticket from 1982.

Followups set to .policy, flame away...

1556. WB2OTK: Racism or Harmless Error?

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-10 00:00:00 UTC
From: Trebb@webtv.net
Message-ID: <239-38799AB5-11@storefull-241.iap.bryant.webtv.net>
Source record: 122259

Realize the distinction between racial slurs and a computer error. Rich didn't lose his license over the alleged racial slurs. It is a rather simple question: Should an ordinarily harmless error be construed as prejudicial in Rich's case, cancelling his license?

An email went to Riley that wasn't Rich's intention to be sent. (Any of us can express our inner most feelings into storage with impunity.) Just as lawyers with mailing errors beyond their control, Rich's email should be disregarded and the matter, set straight.

If there are racial charges, Riley needs to notice him with specificity of the allegations, so he can prepare a defense--as we expect of everyone else in our free society.

I see the whole thing as a partnership between the hams and the FCC, wherein the former are respectful of and cooperative with authority and the latter regulate in compliance with Due Process.

The advanced class won't vaporize after April 15th, while
no NEW advanced class licenses will be issued, existing
advanced class amateurs will be able to hold/renew their
licenses indefinitely and as such will be able to apply
for vanity calls under existing rules.

I suppose if you want to sign as "/20," to show
that you actually took element 1C and passed it
rather than upgrading on the basis of code exemption,
sure go ahead and do it. I'm not trying to defend
"resturcturing" as it came out in the FCC's final
R & O in December, but it's a done deal and I onlyActua
offered comment on how it affects currently licensed
amateurs. No doubt that many dislike the "5 WPM
fits all" aspect of restructuring, if you feel strongly
about it, you're perfectly free to petition the FCC
on the subject and ask that the 13 and 20 WPM code
elements be reinstated. If you are a VE, you can
renounce being a VE, return your VE credentials and
no longer participate in licensing new amateurs under
resturcturing.

Richard your lack of knowledge on the aformentioned subject is not surprising. After trying to convince the FCC that you had nothing to do with e-mail that was sent from your ISP, you now show your ignorance as the the facts of the removal of Radiosigs from AOL. Possibly you should contact AOL and find out for yourself. I hope you are watching your diet while you have been cancelled from the FCC database as a licensed amateur radio operator. I have to sit back and laugh when I read all of the letters that were sent to you from the FCC Compliance and Infromation bureau. As far as Radiosigs being back on AOL, I bet that it will not happen. AOL is aware of the situation, I promise !!!!

Computer error my ass!! We all know Rich is a pathilogical liar. He raised Riley, and Riley called his hand. Simple as that.

There is NOTHING stopping Rich from re-testing. All he has to do is serve out his "time-out" in the corner. I'm sure Riley would take into account the time off he's already served. But just like the little cry-baby Rich is, he'll NEVER admit to being wrong.

As much as I detested Big Al's on-the air behavior, at least Big Al is taking his punishment like a man.

Put your teeth back in, Polly.

Since when were you "decent people?" Decent people don't have watching
birds fornicate as a hobby.

Are you still claiming to be a "land baron" with your 1.56 acres in
Goatfornicate Tennessee? Hey polly, I've heard that you were the basis
for the hillbilly characters in the movie "Deliverance."
Now go play with Grunt Scott, the Indiana Jones wannabe.

Oooooohhh, Logic! I love it!

Yes, if the FCC decided to abolish ALL testing, I would very much be against it, as I feel that in order to be given the responsibility of running a high powered ham radio station, that you should be able to demonstrate that you know what you are doing. I believe that the testing should be periodically updated to reflect advances in new technology, as well as remove obsolete technology, and of course, FCC rules and regs. Right now, as I see it, Morse code is obsolete technology. Sure it is still usable to those who have an interest, but it is not necessary to know to operate a ham station.

Just as I would think it nostalgic and neat to build a simple AM tube transmitter 40 years from now, and use it to "relive the old days", the technology to make it, should not be required to know, for testing purposes, if all the common modes have become digital. It becomes optional, just like CW should be. If you want to use it, use it, but it shouldn't be required.

> parking ticket?

You bring up a very good point, and one that I agree with. I have never been a fan of the VE system, as I know that the temptation by the average citizen to abuse the system is just too great to allow them to be trusted with the responsibility. I personally know VE's that have "slid" people by with both theory and code tests (In fact, I was offered a code "test" by one group, which I politely declined). I know of other groups that do it for money ($200 for general, $300 for extra).

Back when the FCC administered tests, you had to deal with the inconvienience. You had to go on THEIR schedule, you had to wait to retest, and it was very difficult to "cheat" the system. Only the truly dedicated would put up with this, in order to get their tickets. Maybe if the license fee were re-instated and set at a level of something like $50, the FCC would not be so quick to get out of the administrative department, and the "quality" of the ham would be much better as a result.

But in today's air of "instant gratification", many people are too impatient to go through this exercise.

Is ham readio dead? No, but it is losing its uniqueness, and sterling quality.

> worked, say, in military or commercial communications.

Yes, but look at the other side, with the testing requirments as they
now stand, a person with substantially LESS technical knowledge, skill
and discipline can obtain a high level ham license, with little actual
work. So the "value" of the license has been degraded, since it is no
longer necessary to be a "tech whiz" to get one.

> But it seems that this isn't enough for you. You crave that piece of paper

> the "distinction" which you believe it will afford you.

It's no different than the bogus network "certification", that
Mickey-soft and Novell started for computer professionals. It's a piece
of paper, that says that you know something. The difference is that MS
and Novell are making big bucks off of everyone that studies and takes
the test. But it's only worth something if you recognize the validity of
the testing methodology.

Once upon a time, a ham license looked good of a job application or
resume. Participation in what was then "the" technical hobby, was a
testimony that the job applicant knew enough to pass the tests, which
meant something to a manager looking to hire technicians or engineers.

Today, that is no longer true, except for some specialized
communications fields.
>
> If that's all you want, just have a fancy, official-looking embossed piece
> of paper framed and put on the wall next to your $3000 general-coverage
> receiver. Only a tiny handful of people will know the difference.....
>

Maybe we just want to make sure that everyone who plies the ham
frequencies has enough technical knowlege to keep them out of trouble,
and enough responsibility and maturity, that they won't cause trouble.

And it is still true that the value something has, to its owner, is
directly proportional to how much effort one had to expend to get it. If
you had to apply yourself for the better part of 3 or 4 months preparing
for, and passing the test for a ham license, you will be less likely to
abuse the privilege, than someone who just signed on the dotted line.
That's human nature.

Dave

So this is what I have to look forward to, huh? I'm sorry, but I resent the hell out of your sentiment that every new ham is an "idiot" or a "CBer". I am studying for my Technician's license (ready to take the test at the next hamfest) and look forward to advancing in the amateur radio service, despite the less than gracious welcome mat that you folks have laid out. The focus of Amateur Radio is helping people through the understanding and application of radio communications theory. From what I've seen, other than relaxing the CW requirements somewhat, the FCC hasn't lowered the entrance requirements to the point that it doesn't require hard work to attain the various level licenses.

I'm not meaning to single you two gentlemen out, I've been reading similar posts for awhile now and decided it was time to speak up. There are some of us who are just getting started in amateur radio that could use help and encouragement from the more established hams. I understand your anger, but you should be careful not to do more harm than good by callously tossing out such comments. Dig out your ARRL Handbook and read the Amateur's Code, based on this and similar recent threads we seem to have lost sight of something important.

Respectfully,
Mike

Indeed so. The review I recall which points up this failure most strongly
was of a QRP rig that failed to meet FCC spectral purity standards (and
that was after giving the manufacturer a chance to fix it), yet it still received
a very favorable write up. That seems unconscionable to me. A radio which
can't meet FCC standards simply isn't acceptable, and the review should
have so stated in no uncertain terms.

>> BTW I hate magazine layouts with colored text on colored backgrounds.
>> The loss in contrast makes for significantly lower readability.
>
>Consider that reported. I cc'ed Steve Ford. :-)

Yeah, me too, me too. Make it readable first and foremost. If you want
a good model, look at the old Ham Radio. It had a clean clear layout,
easy to read even for those with less than perfect vision.

But the 9 that aren't dead might feel differently.

This also needs to be put into perspective with respect to other risks.
For example, the Lancet reports that there were approximately 700,000
needless deaths in the US in 1997 due to medical bungling. That's about
20 times higher than the rate of violent crime caused deaths. In other
words, it is probably safer to walk the streets of urban areas at night
than it is to check into an urban hospital.

I'm tired of hearing all the whining and bitching about the new FCC
Rules, Part 97 effective April 15, 2000.
As a Licensed Amateur Radio Operator you are Regulated under this Part
97. Your license was granted to you on the authority of complying with Part
97. If you don't like it then voluntarily cancel your license with the FCC.
If you are a non-licensee then don't bother to get you license unless
you are going to comply to Part 97.

For those of you, in an alcohol and/or a drug induced coma, stuck in an orange grove, picking fruit, I submit the following correct information on my good friend AF2Y. The reason he is off AOL, is of his own doing, and business related. As the story goes, Doc was frequently knocked off line, during business transactions, which precipitated him to try another ISP, Radiosigs@mindspring.com. He's not very pleased with the Mindspring ISP either, so expect to find the good Doctor back on AOL,or possibly using cable modem on another account. Thank you all for your patience, he shall return.

Have you fellow forum members ever noticed that when one of the most perverted posters on this forum gets tagged really good, he starts a new thread in the mistaken idea that the brilliant post that caused him pain, was never read in the first place. Must be that elongated head and the fact he stares out the window all the time . Whatever, it won't work, everyone is on to his childish game,,,, HAW HAW...

Why? Most armed robbers who enter a dwelling known to be occupied
are ready and willing to rape, torture, and murder.

>They might
>still keep voice on the upper portion of the bands, but soon you will hear PSK31
>and RTTY
>on 14.010

Well, of course PSK31 and RTTY could operate on 14.010 MHz *now*. The
only CW exclusive band segments now are 50.0-50.1 and 144.0-144.1 MHz.
That's been so for decades. The other set aside areas are only due to gentlemen's
agreements among amateurs. That's worked pretty well for decades, even back
when everyone on HF was a General and there were no artificial class distinctions.
If the anger level doesn't get fanned too high over restructuring, it can continue to
work well.

If CW usage declines sharply in the future, there are likely to be some
adjustments to the gentlemen's agreements dividing up the data portions
of our bands. It happened during the switch from AM to SSB. (SSB started
at the top of the voice segments and gradually worked downward as the
number of AM stations declined.) Something similar may happen with
CW, but the bottoms of the bands should remain a CW refuge for a long
time yet. There are too many existing incumbents for change to be very
rapid.

>Hey, why don't they get rid of RTTY too ? That is pretty obsolete.

RTTY is nearly as old as CW, but it shares an attribute with CW
in that it requires a very simple transmitter to send it (only a couple
of components different from a CW transmitter). So it is likely to retain
a following among amateurs who like to build simple transmitters.

Being FSK, it also has a SNR advantage over OOK (6 dB better at
the same baud using a soft demodulator/slicer). Of course RTTY
normally is used at a higher baud than most CW operation, so this
advantage is mostly just theoretical in current amateur practice
until the CW rates get up to 40-50 WPM. Then RTTY does start
to show its advantage.

RTTY encoding and decoding are also easily mechanized, so the
tedium of Morse wetware conditioning is eliminated for users of
this mode. That's bound to impact its popularity in coming years
with the relaxation of government mandated wetware conditioning

requirements.

But with VLSI DSP now cheap, the meaning of simple is changing
a bit. I/Q modulators and demodulators can now have a very low
parts count. This trend will only accelerate. So designs we might
now consider complex will come to be considered simple as we
move from designing with individual transistors to using VLSI
modular blocks as our components. Thus it is likely that some
of the better digital modulations, with their associated coding
gains, will gain greater popularity even among those who wish
to build "simple" equipment.

In any event, major changes won't occur overnight. It took over
a decade for SSB to supplant AM, and there is still some activity
by some amateurs running AM today, four decades later. It will
likely take a decade or more for any major decline is CW activity
to become apparent. Even in 2050 there will likely still be someone
using it on the ham bands, for nostalgia's sake if for no other reason.
Heck, we still occasionally hear stations using American Morse on
the bands, and that's been obsolete in radio for nearly a century.

1592. FCC CHILD PORNOGRAPHY

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-11 00:00:00 UTC
From: FCC SCANDAL <FCC_Corruption@pornography.net>
Message-ID: <lZRe4.87$c7.8020@news.ntr.net>
Source record: 121990

This was posted over in alt.pirate.radio

The FCC quietly swept a massive scandal at
the FCC's Columbia, Maryland office under the
carpet.

Apparently hoping no one would notice, the
FCC's Inspector General quashed a
pornography ring at FCC Columbia, Maryland.
The pornography ring included instances where
child pornography was downloaded to a FCC
computer during official duty hours.

Several employees were involved in surfing
the internet for pornographic web sites, using
government computers during official duty hours.

And these are the FCC "enforcers" who
are supporting Hollingsworth's enforcement
efforts? GIMME A BREAK!

And for you skeptics, go read the FCC
Inspector General's report yourself:

http://www.fcc.gov/Bureaus/Inspector_General/Reports/sar398.txt

FCC employees also like to use official
government cell telephones for unofficial personal
business. Must be nice, they use cell phones
for personal business, and the taxpayers foot
the bill!
Again, for the skeptics:
http://www.fcc.gov/Bureaus/Inspector_General/Reports/sar996.txt

Similar experience here, JJ, when at the age of 16 I braved the Dallas FCC office for my Class B exam. Only, I got sent out in the hall before I could ever get as far as the exam. I was shaking so badly that I could not even fill out the 610!

Finally got over the shakes - barely - and got on with the code test and the written. I can sure echo what you said about the FCC staff there being very patient and understanding. Remember, that was in 1946 just after WWII and the bands had come back, and there just weren't many kids coming in for exams in those days. Mostly vets who had been radio ops in the service.

72/73, George
Fairview, TX 30 mi NE Dallas in Collin county

Bitch Bitch Bitch! Where were all you cry babies when the ARRL asked for petitions regarding the restructuring plan? Just how many expressed their feeling to the FCC? before the announcement! IMHO the ones that cry and whine the most did the LEAST to express how they feel about code or no-code where it would of mattered. It's to late so it's better to accept the changes and support the man and woman in this hobby of ours to upgrade. The actions and support that is shown today will greatly effect amateur radio in the future. And thats my 2cents worth.

I myself do not view this as dirty, just kind of silly , not as silly as this thread continuing on and on though,I also look to the re structuring of ham radio as a beginning , not and end , you know the old is the glass half empty or half full type of reasoning ,

ALQUEVA DAM
With The maximum height of 96 meters, it will create a lagoon with an area of 250Km2, of which 35Km2 are situated in Spain. It will have a total capacity of 4150 hm3, of which 3150hm3 are utilized.
HIDROELECTRICAL CENTRAL
Equipped with 2 turbine/pumps with 120 MVA each, capable of producing around 350 giga/watts a year, double the necessary to supply both Évora and Beja districts.
The other infrastructures are : Pedrogão Dam, Primary irrigation system.
The 18 e 19 of March operation, will be organized by A.R.V.M. in collaboration with Agr.61 of Santa Maria dos Olivais and the objective is, to give one last opportunity for the radio amateurs all over the world, to contact this village that will soon be completely submerged by the waters of the Alqueva Dam.
We will be on the air for 48 hours.
So that we can remember Aldeia da Luz in a different way, we are determined to organize this activity so that it will be a milestone within the national radio amateurs
Looking forward to the 18 & 19 of March.

You must be new to ham radio. MY extra ticket required 20 wpm, not 13. (I
took the test in a real FCC office in Buffalo, NY in 1984.)

That's right. Novice privileges varied over the years, but the code
speed was always 5 WPM. Originally it was a send and receive test,
but that went away when the FCC deleted the sending requirement
for all license classes.

|> the police, on police bands.
|> ...

Well, foxhunting has no necessary legal connection with having a
Ham radio license. The ham license is related to your permission to
transmit. Anyone can listen without a ticket.

The License may make the results of your foxhunting carry more credibility,
but anyone could take a scanner, antenna, attenuator, etc. and hunt down
a signal.

(Yes, I know some states restrict listening to police frequencies, so
this doesn't strictly apply everywhere.)

A large part of the difficulty in hunting down a jammer can be to
1) find a place where you can hear him on the input frequency if
he's jamming a repeater or 2) getting close (e.g. an apartment building, a
block, etc.) If I were to be involved in such a case, I might try
to just narrow it down to a small area and leave it to the police
to narrow it down from there. I wouldn't want to have the court
case depend on me as an "expert witness".

The other worry would be if you gave the police some good information
and they then go after the wrong person. e.g. if they break down the
door of some innocent nearby person who has an antenna, but isn't
the person doing the jamming.

No matter how you feel about gun laws and the 2nd Amendment, you have to
admit that the armed forces are so far ahead of civilian weaponry that
it'd be hard for civilians to make and sort of credible resistance to
a serious government attack. (As far as Chechynia, I wasn't aware any
of our states were seriously considering secession. A few counties in
Texas, yeah, but I don't think anyone's taking them seriously.)

Well, QEX certainly is closer to that ideal than QST.

I don't understand all the politics of this acquisition. It does seem
odd that the ARRL made a move that will now require them to do
fullfillment for non-members. It does *look* like they're favoring
the publishing business over the notion of being a membership
organization.

The poster is referring to after April 15 when all classes will only
require 5 wpm. There will no longer be any advanced class license
issued, but those who currently hold an advanced class, can continue to
hold that license indefinitely.

That was my next step, the Conditional which gave the same privileges as the General. Later went to the FCC office and upgraded to Advanced and had to retake the 13 wpm code test as since the Conditional was administered by a General or higher class amateur instead of by an FCC examiner, you did not get credit for the code when upgrading.

And you used to have to have one minute of perfect copy out of five minutes of code sent. When I went in to the FCC office for my Advanced upgrade, the fellow next to me copied his 13 wpm OK, but when it came time to send back to the examiner, he was so nervous that he could not send, his hand just bounced up and down on the key. The examiner finally told him to step outside into the hall and relax a bit while he gave me my test. The fellow finally was able to pass, the examiner was very patient and understanding.

You weren't patient enough. Awhile later, Conditionals were
grandfathered to General with no additional testing required.

Arent you worried about them taking away the CW portion of the bands ? I am sure
it
will happen some day. It looks like the first steps have been taken to do this.
They might
still keep voice on the upper portion of the bands, but soon you will hear PSK31
and RTTY
on 14.010

Hey, why don't they get rid of RTTY too ? That is pretty obsolete.

There were pretty serious government attacks in Vietnam and Afghanistan.
Two superpowers bit the dust.

If you actually knew the odds, you'd know you're wrong. Professor
Gary Keck (a criminologist who does not have a pro-gunner agenda,
but who is an honest researcher nonetheless) did a study of the FBI
uniform crime reports and found that those who do not resist a criminal
assault were more likely to be seriously injured or killed than those who
do resist.

He also found that the more effective means of resistance a victim had,
the better his odds of escaping without injury. Those who were able to
resist with a firearm were 5 times less likely to be injured than those who
did not possess a firearm.

Street cops understand this implicitly, which is why they are always
armed. The rate of injury or death for the cop on the beat is lower than
for a number of other occupations, including construction workers,
miners, and farmers. Yet the cop has to go head to head with criminals
every day. If carrying a firearm didn't improve his odds of survival,
he wouldn't carry one.

My sending test, even the one I took before the FCC, consisted of about 10 characters; the sending tests was de facto deleted long before it was deleted. :-)

I would say, Brian, that my preference for CW has more to do with my intense enjoyment of the mode than its effectiveness. There are indeed those who "love cw" and that, IMHO, is as good a reason as any to choose it in day to day operation. Now, for my 10 mW QRP work, the effectiveness has a LOT more to do with than the enjoyment. :-)

Very good comments Tom... I think there will be a large shift of hams to other bands...not the new inrush others think will happen. A lazy no-coder will still be where he is now...on the out side looking in. If I were a commercial interest wanting uhf-vhf freq allocations that are currently assigned to hams...I would directly and indirectly support the restructuring. The big push will be hams switching to working HF instead of the high bands that are under attack from outside forces. The end result will be fewer hams on the bands needing protecting...and the manufactures selling more gear. Its funny all the people who were sold down the river for money are the ones smiling as they float down stream.

I'll live and get over it.

Yes, but nobody will believe you after April 15 unless you present
you license. After you renew, nobody will believe you unless you
present your *old* license. OTOH, nobody has any reason to doubt that
I have an Advanced license. BTW, I've been licensed since 1951, 33
years prior to 1984, and am a member of the Old, Old Timers Club.

I think you're right TIM in the aspect of people doing the sudden
upgrade,
but to refer to all the techs as "lazy no-coder"s speaks volumes of
your personality.

I've said this before, and I'll say it again. HAMs brought all these
changes on themselves. Some people tried to warn about it, but
the problem was it wasn't an illness, it was a suicide, brougt on by
selfish elitism attitudes like this.

And you're just going to continue the downward spiral common to those
that fail to face reality, not even realizing that HAM radio is what you
make it for yourself, not want some self inflated bozo thinks is
important for everybody because it's important for him.

HAM radio will survive this change, but not by actions like this. It
will survive because there will be people out there who aren't so
insecure in their own abilities that that have to berate anything
different from their frame of reference. HAMs that will be the
elmers of tomorrow.

You know what you REALLY remind me of? CBers who declare
"THIS IS MY CHANNEL!!" Hope that label fits you, cause you
wear it well.

Mike

Gee Mike can you write a paragraph without an insult..?? If I wanted to insult you I would email you direct. The restructuring affects me very little. Funny thing here is I agree with you that hams brought this on themselves. Although I don't believe I do...if I had an selfish elitism attitude, or if I was a self inflated bozo, or self inflated bozo, I have the right as a free born American to be just that. But as I said before, I agree that hams brought this all on themselves..and I really don't give a hoot one way or the other. My operation is mostly cw and digital. All the upgraded hams won't bother me a bit. But one thing I will add is that I do feel sorry for the new upgraded ham in one sense. I'm sorry they will never experience the same ham radio I had the privilege of being a part of for 20 plus years. If you listen to the talk on 75m or 20m you hear many groups of hams that will not welcome the newly upgraded hams. Most of these groups have been on the same freq for decades..and they will resist any thing they consider an intrusion. By human nature..when these new people are shunned on the band they will resent it and lash out one way or the other. Some will be good operators and just find each other on another freq. Others will start a QRM war that will never come under control. Its not something that anyone wants...I just don't see how it can be avoided. If you think the code/nocode debate was bad...or the 3.950/14.313 barf/stumpjumpers/liberty net fighting was bad. It will look like childs play when this all comes to full bore. It makes me wonder if all this was meant to allow ham radio to finally cut its own throat.

If I insulted you personally with my lazy no-code statement Mike..I'm sorry. I'm not looking for enemies..I suggest you don't also. But what the hell ..at least we both sign our names to what we type...hi

The subject was *armed robbers* Gary, not all criminal assaults. It
flies in the face of logic that if all victims (armed or not) resisted
armed robbers, they would be less likely to be hurt than if they
just give up the property...

Ok FCC sold you down the river..
Get used to it or get over it...Nothing you can
do about it ..Sell you equipment and shut up or talk to all the
GOODBUDDIES comming on the ham bands and like it....
If 3/4 of the hams would own up to it, they too were CBers in
earlier years..Of course their not about to tell any one...They are
above the CB gang...HI HI HI also the 5 word a minute is plenty to
require , no one much uses code now adays any way..

I'M never wrong!!!
Everyone else is !!!
Gee its so great to be right ,try it some time...

Also, don't forget the Soviet Union during the cold war. The US had superior weaponary over the Soviets by far. But, the Soviets had more numerically than we did in a lot of areas. For example, the philosophy of the US was to have one Fighter take out multiple Soviet fighters. The problem was, the Russians had a heck of a lot of less advanced fighters to contend with.

While one should not sluff of a superior weapon, one also has to respect the Mongolian Hord aspect also.

Finally, I'd like to think that our armed forces would think twice about firing on their own citizens, at least to a degree to thwart such an attack.

Of course the UN could step in and "help" matters....Anyone remember the mini-series that aired on TV in the mid 1980 called "Amerika"?

That was my experience with the sending test also. I took the tests in Philadelphia with jack hammers working on the sidewalk outside - worse than 20M QRM. For the sending test the examiner had a laminated file card with text on it - handed it to me and said start sending. After about a word and a half he said OK that's enough. However I am not sure I really agree with saying that means the sending test was de facto deleted - I think you can tell in a couple of words if the person is able to send.
I have also been on the other side of the test. I helped several high school age boys get novice licenses some years ago. My standard was if I cannot tell what you are sending - and I know what you are supposed to be sending - then you need some more practice.

Many people seem to think that 5wpm code will be the death of Amateur Radio. Seems to me that most folks who wanted in without code have done it already, and it hasn't trashed VHF and UHF too terribly. There will be a great rush to upgrade, but many of these folks have HF priveleges already.

Has my (*pre-VEC*) Extra been cheapened? No. Has your (*post-VEC*) Extra been cheapened? No. You've earned your priveleges. I've earned mine. I use the pre-and-post VEC to demonstrate that the last time that 'the FCC screwed Ham Radio' the hobby survived...and some may say prospered.

I won't talk about the "Incentive Licensing" fiasco. That really did screw Amateur Radio. You went to bed one night, and woke up the next day with 50% of your HF priveleges gone! We haven't lost anything here!

The only reason that the code exams exist at all is the (old) notion that we as hams needed to be able to intercommunicate with, and/or prevent interference to commercial stations.

Having been a budding commercial (shore station) Morse op in my younger days (read late 1970's), I got to take a wonderful FCC exam. 25wpm mixed groups, 5 minutes, perfect copy. No exceptions. No fill-in-the-blanks. No multiple guess. Just an RE with a tape reader(remember those ?). Then, I got to send. Same 25 wpm, no mistakes...he gave me a page from the Wall Street journal. I don't ever think I've seen so many numbers at one time!

Does this make me a 'better' ham? I doubt it!

The theory was ALL tubes. Heaven forfend that the lowly transistor ever be used onboard ship! (Realistically...the static charges around a ship at sea are incredible, and many PA's are still tube-type, satellite or not).

Does this make me a better ham? Hell no!

The purpose of the technical exams is to prevent us from electrocuting ourselves and our neighbors.

The purpose of the rules and regs exam is to prevent us from trashing the commercial and military frequencies.

Should the exams be 'toughened'? Yes, a little bit. We should be able to demonstrate enough knowledge to prove that we can operate a station without trashing each other. There should be some basics of the more esoteric modes of communications. This will now include CW, for better or worse.

Should the questions and answers be published? Emphatically, NO!

If the questions are published, the 'multiple choice' answers, and the detractors, should not be. This is not to act as a 'filter' to keep people out...quite the contrary...we need many more people populating 'our' bands. The theory doesn't have to be difficult, but it should PROVE that an individual can safely operate a station...and not PROVE that a person can memorize 'trivia'.

How many 'old timers' (yeah...right) 'BASH'ed' their way in?

For those of you who don't recognized the reference...Dick Bash published books in the early 80's that had the questions from the FCC exams. He depended on hams who took the tests to 'smuggle' the questions and answers out to him (not physically, but from memory). So don't let anyone tell you that it was never that way in the 'old days'!

It is up to us to determine how exams are arranged, through the VEC system.

It is up to us to welcome and teach the newcomers. It's a hobby, fer chrissake!

Ars longa, vitae brevis! (the Art is long, and life short!)

73 and keep those flames and letters coming!

Bill WA3RA (ex KS3Y)

BTW...about 50% of my operating is high-speed CW. QRM? What QRM?

AB7RS, you seem to be missing the fundamental point of the license exam. The license exam is not a final exam to proves skills or knowledge, it is an entance exam into the hobby of amateur radio.

You're not supposed to know everything when you pass that exam (for any license class). You learn about the various aspects of radio after getting the license.

And, with that goal in mind, the current license exam system is just fine - it does exactly what it was designed to do.

Everyone should get back to the real world.

The only thing to come out of all of this will be a sudden surge to "higher class tickets" (that won't really be the same techinal standards as higher class tickets from the past) and more phone band congestion.

There won't be any massive influx of new hams, and the hobby won't suddenly "turn around" and grow.

Testing never stopped the large majority of people from upgrading. It was only the people who lack memorization skills or enough motivation to spend a few hours a week memorizing the test who failed to upgrade.

The lowering of standards has never "pumped new life" into anything.

It'll make lazy people happy, and Kenwood will sell a few radios. Then in a few months it'll all die off and many people will start crowing "why don't we reduce requirements even more?".

If you doubt this, look at CB. CB fizzled desipite essentially being a "free band" with no enforcement and no license required. The only thing that was gained were manufacturers made money selling radios, and the low end of ten meters and proper users of frequencies in and around the 11 meter band were ruined in the process.

Vince,

Being a Republican with a strong Libertarian streak, I must ask, just what does Morse code have to do with radio? I mean, telegraphy(sp?) originated on wires are you using it to communicate these long diatribes?

I certainly hope you have done something to further the art of radio communication than manually operating a spst momentary switch and acting as a bio-modem.

Morse code can be fun, and I am personally pushing for my 13 WPM, maybe even 20, but it is for fun. Logically, it has zero to do with the theory, operating practice, or development of Amateur radio.

Please stop crossposting these posts to the sat group. I know not much goes on here, but this condescending saber rattling is NOT on subject.

Thanks

Christopher Cox
KC8FRJ

PS look at the bright side, this initially should have little impact on the A1 band allocations, and possible band crowding may spur more op.'s to use CW as a communication method.

When the nocode-Tech was introduced the amount of hams operators increased dramatically. Infact nocodes became the largest of the licensed groups.. and from that many nocodes became Generals needing to learn Morse code "WHY?" They wanted to be better than they were. Either for one of two reasons. "the bragging rights" or "self worth". I see the same thing happening to the new requirements, and that will be the drive for most hams in the future to become a code ham. This will also increase the Ham population. In either way allot of Code sent today is by a Auto keyer or computer. Most of the Hams I know that are General or above don't even remember the code they needed to learn to get the license. They just wanted it to talk on things like 10 meters. So I look at it like this. In the long run this is going to create MORE hams to help fight off the communication giants of the world who wish to take our freq. for there gain. WE HAMS ARE STRONGER IN NUMBERS!

And that is what I was refering to. If CW usages declines appreciably,
the justification for special band segments for CW will diminish as
well.

Frank, no-nonsense comments that are pretty much on the mark.
Unfortunately, while those of us who already see the light, will agree
with you, those that refuse to accept another perspective, will argue
their dogma until the ground reclaims them. What's that about teaching
an old dog new tricks?

Like the old saying, "try to tell a nut that he's nuts, and he'll swear
that you're crazy".

Then why to people go to college to get a degree? That "piece of paper",
like a ham license, is a symbol of what you've endured in order to EARN
the privilege of being what you are.

I know sveral "computer whiz" guys, that are 100% self taught. They
attack thier hobby, with intense enthusiasm, and are probably as smart,
if not smarter, than "book taught" college guys. But you know what? when
it comes to finding a high level computer job, they have it tough
because they lack the PROOF (the piece of paper) that says that they
really know what they are doing.

> I'm too old-fashioned, eh?

You cannot ascertain, with any certainty, the level of qualification a person has, through a simple personal interview. Remember, you might LIKE the person, but the fact that he shot a 65 on the last 18 holes, drives the same kind of car, and has a hot looking girlfriend, mean nothing as far as far as job qualification goes. Any documentation, licenses, degrees, etc, that someone has is a testament, to their skill level. A ham radio license used to be highly regarded in that vein. Today, that is not as true.

>
> > And it is still true that the value something has, to its owner, is

The "piece of paper" is only a symbol. It's what it stands for that's important. A ham radio license is only the starting point. Hopefully, a person will learn more after being licensed. But for many, the achievement of the license, is acknowlegement that they've reached a milestone in their goals. Life is but a series of goals. Why diminish the value of someone's goals?

> should be nominal.

The license is basically a permit, but it is also the permit to operate some potentially dangerous equipment. Equipment that can cause harm in some cases, and interference in others, if not operated properly. By passing the "permit" exam, you are basically providing proof that you know enough (in theory) to stay out of trouble. If for no other reason, that is what makes licensing necessary.

Why do we license drivers (Other than the cynical answer "to fund the governement via fees")? Would you feel safe on the road, if you were aware that people did not have to pass some minimum skill and safety testing before being allowed out there with you?

> You should evaluate an individual ham by his/her actions, not by his/her license.

True. But that still does not diminish the value of the license as a certification.

> Besides, one doesn't really need to be a "tech whiz" to be on air.

Ask any CBer and he'll agree with you. But is that what we want for ham radio?

> But for those that are "tech whiz's", well congratulations. If "tech whiz's"
> are looking for paper recognition (which is silly in my view), then perhaps a
> note or something could be attached to his/her license -- however, there is no
> need for assigning radio permissions based on this.

There certainly IS. I'm sorry, but you can't tell me that a person should be given the responsibility to run a 1.5 KW station, with variable frequency control, with the potential to cause harmful interference, harmful radiation, and the potential for self injury if used improperly, without some form of testing first? That's insane! The more you know (and can demonstrate) the more privileges you should have.

If you just want to yack with your "bro's", then use the internet,
phone, or stick with low power radio services. That way you can't hurt
yourself or anyone else.

It's an analogy. You drew the wrong parallel. This has nothing to do
with who's getting paid for what. It's about the recognition of
certification, and the value that it projects.

No arguement there. But the line between "required" and "desirable" can be subjective. What's required to you, may not be for another person. That's why we have the FCC, who hopefully has the foresight to make that decision in an unbiased manner.

I didn't say that the current testing was perfect. I agree that you
should be required to LEARN the materrial, rather than simply memorizing
Q&A's.

> Nothing in the Amateur testing has ever guaranteed that the person would
> be either mature or responsible - or that they wouldn't cause trouble.

Nothing in the driver's license exam guarantees that either. But
hopefully, it DOES show that they've achieved the very basic minimums,
and hope that the person has some common sense as well.

That is certainly one distroted way that some people view life. Some
people think that they have more "rights" than they are entitled to.
This sort of "spoiled thinking" is based on, IMHO, having never been
taught the meaning of the word "NO" as a child.

>
> I don't know why the old Extra holders are so upset about the new rules.

Also agree! Many old timers put down the no-coders, under the
mis-informed, preconceived, sterotypical, notion, that no-coders are
nothing more than CBers. I don't think they will even get it through
their thick skulls, that there are some really talented communications
guru's in the making on VHF/UHF thanks to the no-code license. THEY will
be the ones that finally bring ham radio into the digital age, not the
old time CW ops, still passing traffic (and wind) the old fashioned way.
In the time it takes them to copy one piece of traffic, a modern digital
network can send a hundred times that amount across the entire globe and
back.

Well, look at the bright side, Dick. The advanced class ticket
will become the *PREMIER* ticket in ham radio because it required
13wpm code, not a measly 5wpm like an extra ticket. :-)

I do not question the rules and regs. I simply do not think "Amateur"
radio operators help Police agencies because of their "civic duties". I
believe it's for the attention. I however do not have "Blind Faith" in
police agencies either.
It seems to me (at times) that hams go out of their way to help the people
who will screw them the most later. I suppose I do not like doing much for
my Govt.
as they do very little for me. They already TAKE what they want. If I were
Ramsey, and I had helped so many, I would feel insulted! (assuming he is
innocent of all charges).
In a former life when I drove a "Big Truck" I had to carry a fire extinguisher.
Federal Law. However, I question if I would relinquish it to law imforcement
without a deposit. As it would be returned empty, and at that point I
would be in violation of safety laws punishable by fine. I have no doubt
that upon entering a scale and being inspected, I would be ticketed
(explanation or not).
To paste your lines:

(a) Recognition and enhancement of the value of the amateur service to the
> public as a voluntary noncommercial communication service, particularly
> with respect to providing emergency communications.
>
I do not see the above as grounds for foxhunting illegal transmissions for
the police, on police bands.

And if you started supplying "voluntary noncommercial communication service"
to the public on a regular basis, (non-emergency) you would have to pay
from someone.

In my home county in East Texas, if the population were spaced equi-
distant from each other, nobody would be able to hit anybody else
with a gunshot. :-)

Feels absolutely great, Brian. The Advanced license will
become the premier class in the ARS. The 13wpm Advanced
will be much more highly valued than the 5wpm Extra. :-)

> necessarily need a particular piece of paper.

Unhuh. For this the FCC ISSUED a "piece of paper" a SPECIAL
piece opf paper noting that the named individual had
achieved the Amateur EXTRA class. That word meant something
in times past. Today, no. In the future, no. So you
socialists have won that point. All in the same basket,
alike. No incentives. Relieve the limp, lame and lazy of
all burden and reason to actually get off their asses and do
it.

>
> Do you believe that you are a better person than somebody who has as
> much, perhaps even more, knowledge and experience as yourself but has
> not, for whatever reason, decided to pass the exam?

If that "person" concludes that he doesn't want to be an
Extra class ham, that is his privilege. His knowledge and
experience is of no consequence to the ARS, as the few
individuals and their promoters have so pointedly displayed
here. THEY chose to avoid amateur testing, not those who
just did it.

Our entire system is based on incentives, inititiave and
performance

Yours is nothing but a leftist point of view. Not all the
commies were in the USSR.

what country were you in that had no code test requirements? Back in the old days you had to have 13 send and receive just for a novice ticket In the U.S. that was only good for a year and you had to upgrade or lose it.

I am now done with this thread.

> believe it's for the attention.

Since we receive little recognition from our community service, evidenced by the fact that most of my neighbors/co-workers/friends--indeed myself (before I became a ham) are completely unaware that ham radio is "out there" during an emergency, the correlation between public service and "attention" for said service cannot be made.

> I however do not have "Blind Faith" in police agencies either.

Oh, believe me, neither do I. But, I don't look at my service as much for them as I do for the people in my community. I simply use an available mechanism to help my neighbors/co-workers/friends. My disdain for the police community, in general, is well known to my fellow hams in this area.

> It seems to me (at times) that hams go out of their way to help the people
> who will screw them the most later. I suppose I do not like doing much for
> my Govt. as they do very little for me.

It seems, then, that your anger is misdirected toward the amateur radio community. As I said above, I do not look at my public service as helping the police and "govt." agencies as much as I feel I am helping my community.

>
> I do not see the above as grounds for foxhunting illegal transmissions for
> the police, on police bands.
>

While an extreme scenario, you may feel differently about that jammer disabling police frequencies if the ability of the police to save someone's life (maybe your own or someone you love's) was impeded by some jerk thinking he/she is being funny.

> And if you started supplying "voluntary noncommercial communication service"
> to the public on a regular basis, (non-emergency) you would have to pay
> from someone.
>

Well, I wouldn't have to pay someone :->. We, by our Rules and Regulations, are not allowed to perform that service on a regular basis...and it is inferred by those same rules that governing agencies are not allowed to request our assistance on a regular basis.

I have learned, as a new Newsgroup person, that too much time is spent in here degrading and arguing. I don't want our exchange to become that. It is obvious to me that you are very angry and resentful and, while I understand where you are coming from, it is far beyond me to solve whatever history it is that has brought you to your current way of thinking. I would ask only that you please remember most of us commit to public service purely for the benefit of our community more than for the benefit of any one agency. We also know that our service goes largely unrecognized.

Nope, I got one of the first Novice tickets. The code requirement was 5wpm.
To the best of my knowledge, the Novice license has always required 5wpm.

>Welcome to ham radio-set your watch back 40 years

Your main web page includes a link labeled "The Future Of Ham Radio"
which, when clicked, leads to a page titled "Code Forever" - if the
statement about setting your watch back 40 years is true, guys like
you are a major reason why.

>Please visit my World Wide Web Site, you have never seen a page like it.

I did visit. I have never seen a page like it. I hope to never see one
like it again:

>4. How you know you are a ham.

Sample items from the above: When you find yourself mentally
undressing your rig....when you'd rather turn on your rig than turn on
your wife.

Also shows a cartoon with a woman in bed with a man on one side of her
and a pig on the other, the woman is saying "I'm surrounded by hams!"

>7. The writings of me and others on ham radio, hear a typical ham contact.

The writings of K1OIK on ham radio consists of a scan of a page from
Radio World Magazine on which the magazine printed a letter in which
K1OIK disparaged ham radio by making such statements as this:

"Hams are required to serve the public, but in fact they are serving
themselves. Worse, they cause interference to other services (like
your TV) and they erect large towers and guess what, there is nothing
you can do about it."

The brilliant K1OIK also asserts, "Cell phones have replaced the need
for most emergency ham communications in this country."

>12. See now the future of ham radio.

Hopefully it won't include too many hams of your ilk.

I just looked through the TS-140S/TS-680S manual. The only thing I could find is quoted below. I haven't found anything about what UNLOCK really means, though.

4.2.8 Power On Function Selection
Several of the functions of this transceiver can be changed at the time the transceiver is turned ON. Repeat when releasing each function.
Switch or Key These functions include
CLEAR 10Hz Main display resolution: ON/OFF
RIT RIT step frequency selection: 10Hz/20Hz
AM/FM AM step frequency selection for the 522kHz-1620kHz band: 9kHz/10kHz
SCAN Program scan hold: ON/OFF
CW/N Audible mode announcement: Beeptones/Morsecode
F.LOCK Audible alarm: Beeptones/Morsecode
1MHz BAND switch (1MHz switch is ON): 500kHz/1MHz

4.2.9 Alarm Function
Several alarms have been included to signal errors that you might encounter. The chart below lists the possible causes and the resulting Morse code alarm. Morse code will be heard from the speaker.
MorseCode Indication
RESET When the microprocessor is reset
UNLOCK When the system is unlocked
CHECK
MEMORY When the SCAN key is pressed and the receiver is unable to memory scan*
EMPTY When all memory channels are empty and attempt to select memory channel with 1MHz switch ON*
FULL When all memory channels are full and attempt to find out an empty channel with 1MHz switch ON*
* 3 short beeps can be selected by pressing the FLOCK key and the power switch ON. (Please refer to section 4.2.8.)

Good luck and best 73,
Skip

Yea, let's just throw any decency out the window and use those words all
the time, paste them on billboards, and go ahead and sink society even
further into the sewer. Guess that is why you like cb so much, you fit
right in with the foul-mouth crowd.

This is not an uncommon tactic/argument used by anti-gunners - the claim that "other factors are at work" when the fact that all types of crime are statistically reduced where gun laws are less strict...

It just ain't so!

PLUS, it has been REPEATEDLY shown to be true in cities/states/nations, that an UNarmed society is a sitting duck for abuse by criminals and politicians both inside and outside their own nation - which may well be ONE reason some here in the USA resist actions by NATO and the UN to extend their gun bans to THIS country - *I* sure wouldn't want to see Bosnia or Chechynia repeated here on US soil, at least NOT while *I* am disarmed!

Have original AEA isoloop parts. Big black body cracked after too much UV and too many birds!

The band and variable cap with the stepper motor drive and controller box with power pack are available. All in good working condition. Even have 100 ft of controller cable!

Make offer, including shipping.

If you equate thrill to pleasure, then you are right.

I have a good friend who has been on one of these manhunts for real. He says he actually got a high everytime the moron transmitted and they got closer to locating him!

He got no money - just a polite "thank you" from the local DA (not even the police chief or other cops) when it was all over.

I am not sure angry is what I am, possibly disinchanted. I too would be willing to help my community (not that I have one). I do help my neighbors when needed.
(not in communications...yet) I could babble on about injustices forever. I shall save you from that. (whew!)
I'm sure some (or many) of my polictical views intertwine with radio, as I hear or see hams bringing the 2 into the same arena. Would I help local police find a missing kid in the woods by supplying communications if needed? No. I would however loan them the equipment. I would also help them search by horseback.(been there done that) Do I think my equipment would be returned to me in the condition loaned? Probably not.
Are there exceptions? Of course.

If someone stole my gear, would I call the police? No
Would I get it back if I did? No
If they did recover it would it be returned to me? probably not. (at least for some time (evidence etc))

Will someone steal from me here? NO
Would my neighbors protect my property? YES
Would they call the police? uhm???

> While an extreme scenario, you may feel differently about
> that jammer disabling police frequencies if the ability of
> the police to save someone's life (maybe your own or
> someone you love's) was impeded by some jerk thinking
> he/she is being funny.
I think that I have paid dearly over the years, the police should (and probably do) have the equipment to do the task themselves. If they do not, maybe the police agencies ie: CHP should not spend $3000-$4000 each on light units for their cars, and invest in fox hunting equipment.

possibly the US Border Patrol could loan them theirs, as they do not really have need for it.

Either way, I use the bands allocated me to converse to/with others, to learn, and to save myself phone bills, postage...etc. Not to specifically help my, or your community. I did not intend to become a public servant. Did you study for, and get your ticket....did you save, purchase or build your station to help the comunnity? Was that you're initial intent? We have a neighbor lives a few miles away, my daughter talks to her on 11 meter. Our neighbor is a toll call.
My father lives in CA as I used too. One of us saves money with radio. I've met some real interesting folks on the air...that was my intent.

Somehow I think that's okay. Yes?

I suppose if others want to do other things that's okay too. Your point made.

Dunno, Jim, will you? My statement means that pre-April 15
extras will be forced to present their licenses to prove
that they are not 5wpm extras. Advanced hams will have
no such problem. :-)

Once upon a time a novice who lived greater than a certain distance from
one of the limited number of FCC testing centers could take the General
class written exam and receive a "Conditional" license with roughly the
same privileges as a general.

Your statement "Anyone whose license permits the use of CW...." is very misleading. All licences permit the use of Morse code. The Morse code test is not about whether the operator is allowed to use Morse code or not, but whether the operator is allowed to use bands below 30Mhz. Passing a Morse code test is not necessary for an operator to legally use Morse code on the appropriate Amateur bands.

Dave Heil wrote:

Is the accomplishment in the piece of paper that says that you once passed 13 WPM or is it the satisfaction of working, perhaps, 20 WPM on air, which can be done now on some bands - without the piece of paper.

Why is Bob Sherin trying to change the face of racism to harmless fun ?????
W4ASX should think about what he wrote prior to posting. I do know one thing,
there are many members of congress who did not think that the words expressed
by WB2OTK were just in humor. What Mr. Sherin has failed to acknowledge is
the fact that this is not an isolated incident, but rather a repeat of prior
statements of racism issued over amateur radio by WB2OTK. Bob, if you need to
listen to the tape recordings of prior OTK racial slurs just let me know and
I will mail you the copies that went to members of congress. Please do not
try to change the ugly face of racism, next you will be writing that Charles
Manson should be out of prison and doing charity work for the United Way !!!!

No, that would be rec.radio.shortwave. This group is primarily for
miscellaneous issues relating to amateur radio, though many amateurs
are quite knowledgeable about shortwave reception.

With all good wishes,

If your pride is in the piece of paper then it is misplaced. Your pride should be in the wealth of knowledge that you would have gained as a Amateur Radio operator and in sharing of this knowledge with less experienced and less knowledgable Amateurs. For this, you do not necessarily need a particular piece of paper.

Do you believe that you are a better person than somebody who has as much, perhaps even more, knowledge and experience as yourself but has not, for whatever reason, decided to pass the exam?

Why is it important to have a peice of paper which says that you once passed a 13 WPM Morse test, except for self-gratification. I know Amateurs who passed the test - many years ago - but could not use Morse code now, while others, operating on VHF and above, who have not bothered to take the test but still use Morse code. They are in the hobby for enjoyment, not for status.

Dear Lloyd,
I have listened to Ralph Stair long enough to know who said what!!
Stair said if God does not make a major move before the year 2000 he
would tell God to go to hell. This is on tape and a proven fact. He is
always saying if God doesn't make a major move before the year 2000
this and that. He also said that if his prophecies did not come true by
the year 2000 he (Ralph Stair) would put up and shut up!! He is the one
that started all this crap about the year 2000 and the importance of
the date, not us!!!! I wonder who should be calling who what?!!

I too have my Extra ticket. I am not too worried, the foul mouthed individuals who are on 11 meters or 3950 don't use CW that often. I use CW almost exclusively. As I see it, the AMers an SSBers and FMers will have to bare the brunt of a new class of lids. 20 CW will be safe foever,

It's hard to comprehend that Jefferson and his contemporaries could
have possessed such clear and accurate foresight - they have quite
accurately prepared the "cure" via the Constitution and Bill of Rights
for what our nation has slowly, steadily degraded to... Pity is, I'm
doubt we enough citizens in our society at present with the courage
and sense of outrage towards our current "representation" to make use
of what we have been provided at so great a cost...

I just passed the 4A and 4B writtens today and now have CSCEs to cash in come April 15th! Have from before a pre-1987 tech license (5wpm code and general written). So I'll be a novextra, but I'll keep my old callsign.

It wasn't that hard, but realize my background: BSEE, electronics hobbyist for 30 years, pre 1987 tech. And a week of studying the question pools.

These web sites were a great help:

Uh, Dave. CW is allowed on ALL HF frequencies. It is the only mode
where this is true. There are just certain band segments that are
set aside for CW only.

In rec.radio.cb Dave Hall <nojunkmail_n3cvj@worldlynx.net> wrote:

: It's no different than the bogus network "certification", that
: Mickey-soft and Novell started for computer professionals. It's a piece
: of paper, that says that you know something. The difference is that MS
: and Novell are making big bucks off of everyone that studies and takes
: the test. But it's only worth something if you recognize the validity of
: the testing methodology.

Funny. I just received e-mail from MS today - offering their Certified
Network Engineer (or whatever it is) class. The cost is $8000, but they
pay me $10,000 when the class is completed.

: Maybe we just want to make sure that everyone who plies the ham
: frequencies has enough technical knowlege to keep them out of trouble,
: and enough responsibility and maturity, that they won't cause trouble.

The knowledge requirement went away as soon as they started publishing
the question pools. It then became a matter of memorization.

Nothing in the Amateur testing has ever guaranteed that the person would
be either mature or responsible - or that they wouldn't cause trouble.

: And it is still true that the value something has, to its owner, is
: directly proportional to how much effort one had to expend to get it. If
: you had to apply yourself for the better part of 3 or 4 months preparing
: for, and passing the test for a ham license, you will be less likely to
: abuse the privilege, than someone who just signed on the dotted line.
: That's human nature.

Maybe. Or maybe someone who had to work hard would ignore legal
requirements when he/she though it possible to get away with it,
as a "right" for having to work so hard.

I don't know why the old Extra holders are so upset about the new rules.
It does not degrade THEIR efforts, or lessen the value of their licenses.

Remember when you had to hold a license for 10-20 years (I forget how long)
before you were eligible to apply for an Extra Class license?

Personally, I feel that the publishing of the question pool is wrong, but
it is only my opinion. I believe a person should have practical knowledge,
not just a bunch of memorized information.

On the other hand, I have more respect for the recent no-code tech who
behaves himself on 2 meters, and maybe plays with packet radio a bit, than

I do for the notorious groups of troublemakers on 75 meters and elsewhere.

Brush up on your 10-codes Boys.

The CB-RL, Citizens Band-Relay League in Newington, CT, is
going to update their Operating Manual with a section on 10-codes
and CB Lingo so old Hams can understand what the new hams
are talking about. There's also going to be a section on how to
properly tune a transmitter for maximum over modulation & Splatter.

>if he just know the right people.

1st you say the VE system is corrupt then that perhaps most VE's are honorable...Which is it? VE's risk their own license every time they sign for someone else's.... I have yet to meet a VE (and I've known a hundred or more) who would risk their own Extra Class ticket to "hand out" a license. Using your logic of painting the entire VE sytem black because of a few improprieties, then perhaps all "Coded" hams are like those fella's on 14313kc, 3950kc.... I suppose you'd throw out a cart of apples cuz' you find one bad one!

>I no longer believe that the ARRL is promoting this hobby in a manner
>which will cause me to be proud to be a Ham.

Then renounce your membership.... then go see if you can find anyone else who's fighting for your interests.... K1MAN? ...73 Magazine? ...Gordon West? ...W5YI? ICOM? ...Yaesu? ...Kenwood?
...CQ???.....Whooooooooooooooooooooooo???

> I do believe, that in a
>very short period of time, Ham Radio will become a vast wasteland,
>where no one with any intelligence will wish to associate.

I believe we heard all this before, at the introduction of the No-Code Tech license. It has not come to pass. Tell me.... what exams did you take? ...Did your first license require a CW exam? Did you take one of the easier exams under the VE system (where you had access to all the answers), or one at the FCC field office??... Did you have to prove you could send good code as well as recieve it? ...Did you have to upgrade your Novice license in 1 year or lose it?

My point is... times change, licenses change, requirements change.... LIFE is change.............. adapt to life as it IS and WILL be or fade away like a dinosaur.

Amateur Restructuring, Liberal Democrats, and No-Coders.

The FCC's restructuring plan shouldn't be a surprise to
anyone. After all, it comes out of the Liberal Clinton
Administration. Conservative republicans are willing to work hard
for their rewards, but Liberal democrat No-Code CB whiners want
everything handed to them on a silver platter. The democrat
whiners want to get ham licenses as easy as they get their welfare
checks. And the Liberal FCC, part of the Liberal Clinton
Administration gave the Liberal No-Code CB whiners what they
wanted, and the rest of us got shafted. Liberal Democrats like
to steal treasures from the hard workers, and give to those who spend most
of their time waiting for another government hand-out. When liberals do
this, it makes them feel important & needed.

restructured Ham = Welfare Ham.

PVC of that diameter might make for a decent single-use launch tube for a respectable anti-armor missile. Now if your'e talking about 1/2" diameter, 10 inch long PVC, then Cecil, I think I'm at a loss for a good use for that. Maybe a very short bong?

No. Surely by getting on air at 20 WPM plus, you do not need the
callsign and piece of paper as proof. Unless, of course, the callsign
and piece of paper is just a status thing.

Amateur Restructuring is not a simple, one-sided issue, although many would like to force the many different viewpoints into one small box.

Times are changing, and whether we like it or not, there are realities that have to be faced. Here are a few.

The "magic" of your voice (or code) traveling thousands of miles is basically gone. I'm old enough to remember well the first color televisions, trans-Alantic TV signals, etc. When I first experienced amateur radio (as an early teenager), it was beyond belief that you could actuall talk to someone long distance wireless. I was even awestruck at some cheap walkie-talkies I owned! Now, we communicate effortlessly worldwide via the internet, instantly.

Commercial interests want more bandspace, and amateur radio operators who are time-frozen in the past have a poor argument to occupy valuable spectrum space to discuss their gall bladder surgery, latest bowel movement, etc., simply because they grunted it out years ago to meet the requirments of 13 wpm, and so on. Amateur radio was intended from the start to focus on public service and to encourage growth (in electronic knowledge). It was never intended to be a static, backward-looking social club, remembering the "good ole days". The very nature of amateur radio points forward.

The technical aspects of amateur radio have changed incredibly. Twenty years ago, you could still work on your own car (plugs, oil change, tune-up). Check out the lastest cars, and tell me how much you understand. The people I first met in amateur radio built their own rigs (early 60's). Today, that same rig would splatter unacceptably all over the band. Then, most built their own. Today, probably 98% use quality, name brand, sophisticated rigs, with tight specs on both transmit and receive. It's a changing world.

YES, some things could get better. Getting rid of the corruption in the VE program would help. Riley Hollingsworth has been extremely good news for the hobby. But perhaps we should require computer aptitude tests as part of the hobby (to weed out the old farts). Maybe we should ban discussions of all personal health problems, not to mention useless nets, that accomplish little. Simply passing the CW and written test back then is not a lifelong license to sit back, and reap the "reqards" forever in careless, meaningless blabber. I have always been in favor of amateur radio operators having to provide "evidence" for their continued re-licensing, such as proof of public service, classes taught, projects involved with, etc, much as medical

professionals have continuing education to keep them sharp. One statement the FCC made in their R&O was that there was basically no correlation between those who learned CW, and those who were proper station operators, or were significantly involved in public service. I couldn't agree more. What right does a 30-40 year Ham veteran have to needlessly blab on, using maximum power (or more), with poor antenna matching, and generally abusing the spectrum. Yet, that person is exactly the same person who will argue themselves blue in the face about the need to keep the code, etc. They need a reality check.

There is plenty to compliment and plenty to criticize in amateur radio today. I compliment the FCC for having the guts and sense of REALITY to not only face the real facts of the day, but to do so in a way that doesn't necessarily favor any special group, including the ARRL. Hopefully the tests, method of testing, band usage, etc. of today's amateur service will improve, and retaining CW at previous rates was not solving the problem. Kudos to the FCC for being willing to move forward with guts rather than look backward with failing memory.

I'm in my 50's, and hopefulle young enough to still engage and enjoy the new realities and technologies that emerge each day. However, the "tomorrows" are owned by the young, and I hope I have enough sense and graciousness to know when to get out of the way. The FCC has taken an important first step. I hope during the year 2000 that they and the amateur community can find some good solutions to the problems we still face and better use of the privileges we enjoy.

The FCC is a liberal front, huh? You mean the same FCC which has been busying itself over the past dozen years giving 'handouts' to SBC, Skytel, Iridium, and other shiftless players in the wireless industry? If you want to assign political and ideological motives to ARS restructuring, look in the other direction. Namely, the driving power of corporate money on Congress and Executive agencies to deregulate, and to sell off, at pennies on the dollar, public assets and resources. Hams (and the general public) got shafted, and continue to be, by these spectrum auctions, where the winners don't and won't pay up, but get to keep using the spectrum, or more often warehousing it to leverage themselves into the next merger or buyout. The FCC can't be bothered with us anymore, because they view us as being the loafers. We don't produce a nickel for the Treasury. Read the R&O. Over and over it harps on the adminstrative burden, and by implication the revenue drain, the ARS causes the Commission. And who were the principle agitators for dropping the 13 and 20 WPM CW tests? NCI, W5YI, Inc, and amateur equipment manufacturers. Hardly a bunch of lefties, by any stretch of the imagination. Mostly those who stand to reap large profits from expanding their clientele.

>manufacturers are happy with this philosophy.
>Anything you get for nothing has no value. Think about it and you
>will know this is true. Anything requiring effort and truly earned,
>will be honored, respected, and nurtured. Why do we implement policy

Why do you say that? It simply is not true in many perjaps
most cases. I and most people I know value things based on their
uslefulness, and/or usefullness vs how hard it was to get. In other
words on some type of value.

>that will degrade the value of a license? Why not, just once, make it

Indeed these changes be they right or worng in conception do
INCREASE the real value of the lisence if perhaps not to yourself then
at least to many people. The near total failure of the CW side to even
seriously consdier this line of thought, is certainly a reason that
that side of the debate has not been able to muster any arguement to
really sway the people that count in this matter. The FCC

>something difficult, something earned, something valueable?

The value of the license is in what it allows one to do. In
those terms all licenses have and are and must continue to increase in
value, when any of the following happen, technology improves, numbers
increase or spectrum is enlarged. If you don't understand that value
of the license is in what you can do on the air then aren't you really
missing point of having a license?

As to earned or difficultity these seem to me be out of
place. Diffculity, the Government is NOT in the bussness of dealing
out S&M as the Dominant partner, (it manages this at times but that is
not one hopes the purpose of Governance. Earned, why should I earn
the right to use what should never have been so restrictied?
>I no longer believe that the ARRL is promoting this hobby in a manner

Alas here I agree with you. I can see where bythe ARRL is
doing much of anything to promote this hobby, at all, and without
regard to the manner in which they do so

I took my conditional class license in 1962. There was a ham radio
class and the Wichita Amateur Radio Club offered the conditional
class exam with them. They were as concerned with integrity as the
FCC was, and considering the nearest FCC office then was Kansas City,
I took it with the radio club. They sent 5 minutes of ramdom code and
we had to get one minute perfect.
In 1969, I took my First Commercial with the FCC in Spokane. I think
that the conditional was equal to the General. There is no magic
taking an exam infront of the FCC.

You are making some pretty big assumptions on rather slim evidence.
I do not use profanity. I do not feel it adds anything to what I write
or say.

The only reason such words are "indecent" is because we are taught that
they are indecent as children.

It is not "profanity" or "indecency" that are sinking our current
civilization. It is the violence, the excessive government control
and the way people are becoming jaded with being able to get too much
too easily.

Tom W8JI wrote:

>
> You didn't take away anything, but the FCC sure did!

No, they didn't. You earned whatever class license you
hold, and can lay claim to the set of skills you had to demonstrate to the FCC or VE when you were tested, regardless of what the FCC does now. That can never change. For that
matter, a ham license is not intended to be proof of some static set of skills that will forever remain the same. It's a permit to get on the air with specific privileges. The *only* way the FCC can change the value of your license is if they add or delete subbands from your current privileges. You're free to confuse

the effort you put into getting the license with the operating
privileges it grants you, but that's a classic case of mistaking
the map for the territory. So now it's easier for newcomers
to get your class of license, but that doesn't change what you
accomplished to get there.

And if it is so damn important to you
that people on the air know you're an "Original Extra" or whatever, to set you apart from the folks who only had to do 5WPM, fine. You'll sound like an elitist, but go ahead if it
will make you feel better. People will know what you mean
if you say you're an "old extra" or "original extra".

>
> It's typical for those who dislike working for something and who
> expect handouts to not understand why some people have pride in what
> they accomplished.
>

You can be proud of your accomplishments and also
accept without bitterness that the world has changed.
5 WPM does take work and study, and is surely not a "handout".
I know several people in their 20's and 30's struggling
to achieve their 5WPM, who would be very insulted by
your characterization of this as a "handout". Yes, it's easier,
perhaps much easier, but it's a lot more work than most lazy
people would ever put forth. 5 WPM will do a fine job of
keeping people looking for handouts off ham radio.

A lot of times I hear this "handout" crap, and I see a
survivor of a hazing ritual, known as "high speed code", resentful and angry
that others will have an easier time than you had. Hopefully this is not your
real motivation for being
so upset at the changes.

>
> With that in mind, I understand why you agree with the suggestion

I have noticed for some time that these posts get about a dozen posts per day? Does anyone think Email news groups are dying?

I may be missing something, have not been on the internet long nevertheless I thought there would me a lot more traffic no pun intended these news groups are as dead as the Winnipeg Repeaters ?

Are there other news groups with more hits than the ones I get with Sprint.

Comment
It has been stated millions are on the internet? These news groups do not reflect this nor does the hit counters on many web pages.

Uh, let me get this straight, you lose money on every issue, so to
make money, you print more issues? I seem to have heard this
gag somewhere before. Yes sir, we sell below cost. How do we
make money? Volume, volume, volume!

Seriously, if this deal got you the rights to publish all the Ham Radio
back issues on CD, it's worth it.

>survival. I'm not sure how that type of perdition sits with the
>not-for-profit status the League enjoys.

Well, that thought had crossed my mind too. But it appears Comm Quarterly
was going to be closed by CQ anyway, so I think QEX is just getting a subscriber
list out of this deal. (And possibly the rights to the back issues of Ham Radio,
which really is a valuable property.)

>Second, I'm a bit troubled by Doug Smith's dual role as Lester Ernshaw's
>Chief Engineer at Kachina--and as Editor of QEX. The potential for conflict
>of interest here is very real--and I have no confidence Mr. Smith can be
>expected to deal with that issue objectively.

That doesn't bother me at all. QEX doesn't do product reviews. If he were
working in the Product Review section of QST, it would be a horse of a
different color. But I think he is eminently qualified to preside over a
technical magazine. HIs practical experience should help him separate
the sense from the nonsense (something Comm Quarterly could have
used).

>Third, I'm troubled that the "tech" side of ham radio has now lost its only
>forum for authors who's techincal philosophies may not jibe with the views
>of the League's editorial staff (Walt Maxewell to name one).

Considering the rather vehement technical disagreements I've had with Walt,
I'm not going to touch that one.

>As a memeber of the League, I'm also curious how much money this acquisition
>cost the dues-paying rank-in-file in a time of tight money--and at a time

Try http://www.hfradio.org and http://www.dxzone.com for some
good reference information. IMHO I would say listen to the
morons on 3950 and 14.313 and learn what not to do from them.
Too bad they are (quote)Extra Class(unquote) holders already.
They are the ones who bring disgrace to the hobby, not us hams
who aren't going to have a 13 and 20 wpm code requirement in
the future. There is no such thing as a "Welfare Ham".
Jimmy

>the general public into training to a certain degree like cops
>train.

Lord help us, no! I spent some time as a firearms instructor
for a couple of local departments. You don't want to know how
badly I found most cops were trained, what totally unrealistic ideas
they had about their abilities with firearms, etc. A hard example,
local cop squares off with perp at a range of 10 feet, 23 rounds are
fired, no one is hit, perp gets away while cop fumbles for another
magazine.

A *few* departments have really good training, but most are on
the level of Barney Fife and need to keep their one issued bullet
safely in their shirt pockets.

I tried to beat into their thick skulls that it doesn't matter how
fast you can miss. Only hits count. I also demonstrated for them
that a shotgun doesn't give a 12 foot pattern at 10 feet. You have
to *aim* the damn thing if you want to hit something with it. I
also did a demonstration to show them that their vests didn't
make them Superman. A couple of paintballs between the
eyes does wonders.

We did a lot of training with paintball guns. Before I came, all
they'd done was formal target practice twice a year. That's
totally insufficient. I instituted once a week live ammo range
time, and twice a year intensive "war games" with the paintball
guns. Anyone who doesn't practice regularly with a handgun
is a danger to himself and others.

I made them *run* a hundred yards to the firing line, then
shoot for record. That simulates the level of adrenaline you
have in a real fight. If you can't consistently put all rounds
on target under that condition, you're not ready for a gunfight.

I did do some good. I ran my guys through enough drills that
most of them learned to keep their finger outside the trigger
guard until they'd acquired a hard target in their sights. I didn't

tolerate *any* misses. I told them if you don't know *exactly*
where that bullet is going to go, you don't shoot. Etc. They
weren't Matt Dillons when they left the first course, but at
least they were less likely to shoot themselves or some
innocent bystander.

(BTW I've trained so hard on having a hard target in
the sights before shooting that I found I literally couldn't
pull the triggers when I tried to shoot two guns at once.
I couldn't see both sets of sights at the same time, and
I literally couldn't shoot at all. *That's* the level of training
you need.)

I tried to get across to them that their most valuable skill
was situational awareness. They *had* to know what was
going on around them at all times. (I bopped several of them
on the head with a rolled newspaper to show them they
weren't paying attention as we went through building
clearing drills.)

On the range, I taught them the Zambezi drill, "Two to the
chest, one to the head, makes the perp dead dead dead."
I warned them I was going to count the brass, and I damn
sure didn't want to find 23 empties on the ground and
no blood the next time they had a shootout.

They didn't like me much, but I may have saved the lives
of some of them, and maybe of some innocent civilians
too.

There are some very good defensive gunfighting courses
available to civilians. (Civies need a somewhat different
sort of training than cops need because the situations
they're likely to face are different, and the rules of engagement
are different.) Anybody who carries a gun for protection and
doesn't take one of them is a fool. I really suggest taking
several of them. Each course has valuable lessons to be
learned.

And practice, practice, practice. No one can maintain
competence with a handgun unless he practices regularly.
I shoot a minimum of 500 rounds a week to keep my edge.
One thing I do to make all this shooting fun is shoot dimes
out of the air. I toss a dime in the air with my gun hand,
draw, and shoot the dime before it hits the ground. Looks
impressive, but it isn't hard to do. I also draw caricatures
on targets with bullet holes. That's fun, and darn hard to
do so that it actually looks like someone too. But mostly
I just practice practice practice. If you aren't willing to
do that, don't carry a gun.

I hope you are all correct. I hope the code requirement doesn't make a difference.

I love CW, it's all I use, and I will be sorry to see it go as a requirement (if it ever does). If CW doesn't make a difference, will someone tell me what it is that keeps the bands from sounding like 11 meters? I have seen them (bands) through about 24 years of change, but for as bad as they seem today, they are nothing compared to 11. Why?

Sure there are people who Bash book and garbage in garbage out throught the classes, but even most of them retain something. In fact it still takes more effort to cram for an exam than it does to go down to Radio Shack and buy a citizens band radio.

It might be said that the caliber of person who can at least crack a book and memorize or take some time to learn the code might be just a littler higher than those who can't even read. Education of any sort will always produce a better idividual.

So I hope you are all correct. I hope the code doesn't make a difference, because once the precidence is set to do away with it, any type of theory is next. Then what will the difference between the amateur and citizen's radio services be?

Bosnia and Chechnya are not examples of unarmed civil populations,
they _are_ good examples of what happens when you have an armed
civil population and a breakdown of government.

> "Blaming guns for Columbine is like blaming

Numerous scandals through the years have rocked the FCC. However, they have some excellent spin doctors on staff who manage to conceal most scandals from the public eye or put enough spin on them where the damage is minimal.

Perhaps Riley's next press release may have the following lead in:

"Pornographers, including at least one child pornographer at the FCC's Columbia, Maryland office assisted in identifying and locating the source of the interfering signal."

Your characterization of the League's motivations is fictitious. It's
true that by buying CommQuart, the League hopes expand its base of
subscribers for QEX, potentially stopping the losses QEX operates under
(and has for as long as it has been in existance). But it was not the
League's intention to kill CommQuart -- Dick Ross had already declared
it dead.

>Second, I'm a bit troubled by Doug Smith's dual role as Lester Ernshaw's

Can you provide examples of how his conflicting interests have affected
the content of QEX?

>Third, I'm troubled that the "tech" side of ham radio has now lost its only
>forum for authors who's techincal philosophies may not jibe with the views
>of the League's editorial staff (Walt Maxewell to name one).

Walt's views have been published in a long QEX article under Doug
Smith's editorship. I believe it was in 1997; may have been 1998.

All things being equal, I'd like to see a multiplicity of ham technical
publications, too. Unfortunately, all things are not equal. It's quite
likely that if ARRL doesn't publish a ham technical magazine, nobody
will. The market is just too small.

>As a memeber of the League, I'm also curious how much money this acquisition

What a pathetic attitude. Unfortunately that is
Dick's long stated attitude showing through again.

When I passed my Novice and General theory
I knew no more than those today. I memorized what
I had to to pass. I then went on to truly learn what
I had already memorized through the help of others
and ultimately via a formal technical education.

It took NO understanding of electronic theory
to use the few simple equations one needed
to memorize to pass the Novice and General tests
of the 50s/60s. It also didn't require any
understanding to memorize 14 circuit diagrams
and regurgitate 5 of them as answers on the
General theory test.

Cheers,
Bill K2UNK - I help anyone that asks. There is NEVER
a stupid question.

Yet before 1951 there were only two license classes.
From 51 to the incentive licensing there were only
three licenses with any priviledge difference (Novice,
Tech and General).

>And who were the principle agitators for

Well you left out the ARRL too since the ARRL proposal
also called for 5 wpm General and 12 wpm Max.

Nevertheless, just how does NCI, W5YI,
ARRL reap large profits now...You say by expanding
clientele, but how much does it take to "reap those
large profits?"

By selling fewer test study guides?

Frankly I also doubt there will be any great spurt of
equipment sales.

England has a gun sub-culture. They are called criminals. One
was interviewed on a recent TV special about security in England.
He said, in England, any criminal who wants a gun can get a gun.
He showed his handgun to the cameraman and said he loved England's
gun laws.

A limited number of callsigns like yours will be available to 5wpm
extras under the vanity callsign program. That may not bother you,
but it bothers a lot of the radical PCTA folk.

>Don't like the tax breaks given to non-profits? Complain to your representatives in Congress.<

Thanks.

>Do you think Dick Ross acted inappropriately when he sold CommQuart to ARRL?<

Of course not! Communications Quarterly was his enterprise to do with as he saw fit. I'd add that Dick has always been very supportive of both Terry's work and the Magazine's mission, and he's been a good personal friend to boot. But, once again, this isn't about Dick, CQ, my feelings, my cat's feelings, or where my wife goes to work in the morning.

It's an ethical question. That question is: Did the League (of which I'm a member) act improperly as a non-profit entity when it purchased and then "killed" a competitive magazine in order to eliminate competition, absorb new subscribers, and improve QEX's profitability?

You say the League did not act improperly. Fine! Your position, of course, implies that the League would be equally justified in swallowing up CQ Contest and rolling it into NCJ, swallowing up 73 and CQ and rolling them into QST, and swallowing up anything else that hurts its sales or gets in its path--including Callbook publications, Hamtrader, 5YI, and anything else it can afford to buy with the memebership's money.

Personally, I think this purchase (not this sale) is alarming and sets a very bad precedent in the industry (kinda like if the NRA started buying up all the gun magazines). And, now that the issue has been duly presented to the group, I'll be curious to sit back and see what others think (unlike you, I don't get paid for this). I simply hope the focus will remain on the issue--and not on either one of us! Thanks for the joust, Jon, I've been itching to do this for about three weeks--and you're a worthy debater.

> inventions" - or does that not meet your personal agenda and
> predjudice in this instance?

--> I was talking about road rage, not school shootings or whatever else you think I was discussing. It's nothing new. You heard occasional reports about traffic shootings, people driving aggressively, etc. long before anyone coined the term 'road rage.' It's just that FOX can't make a special about it until there's a buzzword to use as a title. So now stuff goes national that used to only make the local news. People were being admitted to local emergency rooms with knife, fist, and gunshot wounds long before all the fuss over "road rage" started. Yeah, our society is violent, but I'm not convinced it was any less violent in the past. News just travels better now. (And in the past traffic shootings were almost exclusively assumed to be gang-related by the media, as well.)

> Guns, of themselves are NOT "violent"...
> Autos, of themselves are NOT "violent"...

--> Tell me where in my short post I disagreed with the above? There *is* a difference, though. The only purpose of a gun is to kill. Cars also provide transportation. Guns are designed to kill as easily as possible; cars are designed with safety features to attempt to make them less lethal. So a comparison between the two can only go so far.

Incidentally, I agree with you that the root cause of Columbine has *nothing* to do with guns, and that gun laws would have done little to stop it. The root causes of the Columbine shooting have more to do with the way our high schools are run and the anti-education, pro-sports slant of our society.

It was the same test and code (13wpm) as the General, the only difference is that is was administered by another Ham who held a General class or higher license. The test was mailed to the Ham who would be giving the exam. The examiner verified and signed the form that you passed the 13 wpm code test, then you took the written exam. The examiner mailed it back to the FCC who graded it. Then the long wait began.

Hmm! Even though memorizing the answer and CW is mostly what this post pertains to is not the problem!! If you memorize the answer then you get the question right, You have learned something regardless of what others say! In other words you might say that "0 being the answer to Question #44" is a memorized answer! However since the exams are not in a peticular order, there is no way to memorize an answer to a question unless you studied the book and sample questions! Which in turn means if someone passed the test then they so deserve to posses a license!

If you wish to protect CW, Quit bashing the No-Coders and teach a few!! That is the way to protect the CW portions of the band and to preserve the tradition! Explain to them why CW is important to you and why you enjoy CW so much! Dont point out its relevance or why its the best thing in communications, cuz everyone knows CW is not the best or fastest type of communication anymore!!! Encourage young and old users alike to pursue CW, but dont push it on those who have no interest!

I have interest in CW and upgrading to a higher class of license but I will not be the first to post a UseNet message Bitching and complaining about the possible loss of CW! If CW was lost, I would still be enthused by the means of communication to continue pursuing it and using it! It is not illegal to operate CW in non alotted CW portions of the bands.

Believe me, There are plenty of CB operators that would like to operate on those frequencies and if you dont encourage CW or stop bitching about CW, you will find more bootleggers on the band and blame the No-Coders for your own mistakes!

No-Coders are hams too, and by bashing a No-Coder you are Isolating yourselves to the point of extinction and will find yourself all alone!

If ham radio was going to sound like cb, It would have a long time ago. A Ham License doesnt protect the Ham bands from Jammers or maliscious interference. Now that the No-Code License has been in affect, I have seen alot of CB operators turn to Ham and as a result to never return to CB. I met hundreds of users on CB and not once met one of them that had jammed Ham bands. When I asked A few CB operators I knew in the bay area about wanting to take there test, Only 1 of them didnt want to take it. The remaining 4 people including myself went to Fremont VEC and passed our test. As a result of alot of CB Operators getting ham tickets, I noticed a dramatic increase on the UHF and VHF bands due to the fact that alot of CB operators know just as much as an Advanced or Extra class operator. A once CB operator and now ham (n6yem) was a prime example of this, He totaly amazed me at some of his theories and projects that I had to learn more! I thank N6YEM for encourageing me to get my Ticket and upgrading as well as many other Hams and CB operators for helping out and answering my questions as well as answering a few questions of my own!!!

Don't Discourage, Encourage !! Dont Force it, Endorse it!! CW!!

I swore I wouldn't get involved with this post when I first saw it, because I am not a gun or a non-gun person, either way, and I also don't see where ANY of the gun issue stuff is related to amateur radio. In fact, it is not. But I will take long enough to say:

When I lived in NE New York, we often had occasion to go to Vermont. Vermont, at the time (and still may be) was a Right-To-Carry state. Most of rural Vermont is truly deep wood communities with its share of one-general-store-and-a-gas-pump towns. I can't count how many times, as a teen ager running around "the hills," we would invariably stop at one of these places, walk in and see a whole range of armed men and women in these places. Guns in holsters on hips, rifles slung over the shoulder with straps, etc., etc. Even the first time I ever saw this I was never taken one way or the other with it.

Looking back now, I believe the reason I was never reactionary to it was because I probably figured it was THE safest place to be! One would have had to have been a fool to a) try to rob the place or anyone else; or, b) get crazy with a rifle or gun because there was lots of others there ready and capable of responding.

My point is that to use the argument that "guns kill," etc., why would there be this situation in Vermont? Everyone in those places was always just as friendly as could be and there was no conscious "I have a gun" attitudes. Then, to use the argument that if you lose your guns, our government will make peasants of us...well, anyone need only really think about the shape of life today in the United States. If you think for one minute the US Govt. needs guns to "take over us" you are living in a dream world...it's already happened.

I remember once when a Vietnam Vet, back in the country only a couple of months, mentioned that he would love to go back. I was shocked--and even more awoke when he said to my question of why, that at least "over there he knew who the enemy was."

Just my thoughts....

Kim

I would love to hear a CB'er who really knew how to use the 10-codes.
The code 10-20 means "What's your location?" Can't tell how many
times I've heard "What's your twenty?" It's like saying "What's your
what's your location?"

Totally irrelevant.....a ham radio license is of no commercial use.
This is *Amateur* radio, not commercial/professional/broadcast/PCS
whatever.

The license is NOT a graduation certificate, but rather an entrance
permit to the hobby/service. What one chooses to learn after that is up
to them.

Florida, one of the first to enact right-to-carry, is mostly rural??
With Miami, Orlando, Tamba Bay, etc...
And this is where the first evidence of criminals staying away from
might-be armed citizens proved itself.
Remember sveral years ago it was alli n the press when European tourists
where getting robbed and killed after leaving the Floridsa airports and
the press and anti-gun were screaming. Then they discovered that the
reason was after Fla. passed the right-to-carry law that that
slender,weak looking young AMERICAN CITIZEN women might have a 9mm in
her purse. But, not a out-of-country tourist, nope they were unarmed.
So, stake out the rental car agencies, follow one, jump them when they
stop at a light with your gun. No worry about getting shot by them. Do
as you please. When the main stream press discovered this was the
reason, they dropped the coverage because it proved that criminals
AVOIDED any confrontation that they didn't have all of the odds in their
favor.

Remember the time period too. The US goverment did not really maintain a large standing army, mainly a Navy. They relied on the militias that the states raised in time of war. This carried through till after the Civil War. You know the 4th Mass. the 3rd Maine, etc... That were under the command of the central goverment. Plus, at the time of the Constitution framing, most citizen soldiers supplied their own firearms. So the firepower was kind of equal.
We must also remember when arguing then and now, that then our country was based on a agrairian(sp?) society. None could forsee the industrial revolution and the tremendous immigration of the late 19th and early 20th centuries.

Thanks for reading. I own a Yaesu ft726 and the display is failing.
Looking for replacement or ideas. Factory doesn't stock the part any
more.

Ever ordered Shrimp Scampi or said "Shrimp Scampi"?
Then you've said shrimp shrimp. "scampi" is "shrimp"
in Italian.

The purpose of a baseball bat is to hit a ball, but it is now the one of
the prime weapons used by drug pushers, loan sharks and gangs for
enforcement next to the gun.
What now, permits and waiting periods for Louiville Sluggers???
As long as people wish to do harm to others, it will happen. I know the
argument is the gun makes it easier, and it does. But, I plan to hang on
to mine as long as I feel I need to because the police damn sure can't
protect me or my family. And the law is a not a deterrent. Hell, a good
lawer telling of his bad childhood and shrinks saying its not his fault,
and he out. A guy killed in cold blood, for the fun of it (his own
words), an 18 year female clerk in a robbery, he admitted it and was
sentenced to death. He stopped all appeals. That was over fifteen years
ago and he is still alive thanks to the American Civil Liberities Union
filing on his behalf.
Guns are only for killing? To me going out to the range and shooting a
1/2" group at 200 yards is the same as a hole-in-one to a golfer.
Anti-education pro-sports a reason for Columbine, I personally doubt it.
How about two spoiled brats who our education system taught your
personal failures are not your's, but somebody elses fault. If I
remember correctly they asked who believed in God, and when a girl said
"I do" they shot her. Can't blame a "pro-Christian" education system for
that, we took God out of the schools long before school shootings and
the such. Hmmm, I wonder????

Bravo, Cecil. You speak the truth. As an extra class 20 WPM ham who
enjoys CW, I decided to do my share elmering / being a VE. So,
I teach a cw practice session via repeater twice a week for 30 minutes
per session. It's amazing how many no-coders expressed interest in
"finally learning the code" but when they found out you cant "cheat"
and have to really learn CW (not just memorize published
test pool answers) they gave up and bailed out.Those few who stuck with
it upgraded to novice / tech plus....even had one
go to general.....all for an hour a week for ten weeks. Amazing.

Rote memorization is not on the same level as learning a fundamental concept thoroughly. Yes, there is some retention by rote, even enough to be useful (subjects like band and power limits come to mind), but knowing the answer to a question that asks which HF band to use when the MUF is a given frequency is not nearly as useful as learning the fundamentals of HF propagation as concepts, and as importantly learning and understanding how the various factors (solar activity, MUF, critical angle, antenna polarization and radiation angle, scatter modes, etc.) affect one another and combine to produce a certain type and quality of propagation.

I think the FCC would be doing operators a *favor* by closing the question pools, since people would have to study concepts and *understand* the theory well to pass the tests. The same folks would be happier later, ticket in hand, when the time came to actually set up and operate a station, and the learning curve of new hams would not be as steep as it is (listen to many of the questions asked on repeaters about basics, that in fact were on the exam the poser just recently took and passed, and you see this in action).

I have a pretty sponge like memory and remember the *wording* of many questions from the ARS exams [and others] I have taken, but I am very glad that I approached preparing for ham exams by using the ARRL guides, which I have hung onto because they are actually useful reference, because they treat their subject matter in thorough detail, and as a whole, instead of simply presenting the test questions with the correct answer highlighted and with only minimal explanation.

That is the difference between a textbook and a test guide. I have learned well the basics of propagation, antennas, safety, proper and effective operation, and AC/DC circuits from the ARRL guides (and books like them, such as George Grammer's "Understanding Amateur Radio"). Such reading prepared me first for the tests, then to set up and operate a station, and finally laid the foundation for further learning, understanding, and development in my hobby.

The Q&A style books certainly don't do the latter. If you use them you will wind up doubling your effort/reading later, since they do a poor job of really teaching principles. Even if the Q-pools don't get closed, whenever I can I urge that people avoid the Q&A type guides because you don't learn much from them that you can form generalizations from and then apply in particular cases.

We spend a lot of time debating license exams in terms of fairness, relevance, and their function as a filter. We ought to look at them, and change them as needed, more from the point of view on how well or poorly they prepare people to actually operate a ham station day-to-day, after the license has been granted.

Can anyone recommend suitable handheld radios that will work for sending messages between persons on different floors in a concrete and steel high-rise condo. The building is in a downtown area where there is probably a lot of RF interference. What frequencies or bands would work best?

Any suggests will be appreciated.

Thanks, Fred

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive"
Anderson Powerpole connectors that have become (or are becoming) the most
popular power connector for interchangeability in the emergency community
along with Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with hearing the concerns of hams across
the country in newsgroups of "where to purchase these connectors" and other
"hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low
price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure
source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "one ham helping another" is now extended from my web site
to you.

Ken, KM6YH

Thank you all for your responses.

Firstly, I would like to say that I wasn't just trying to say that CW was the only thing that makes a difference. My point was that having to work for something makes it more valuable to you, and that education is better than no education.

Secondly, I think that most of us will admit (at least those of us who were licensed in the 70's) that CB was a stepping stone, a gateway if you will, to amateur radio. I got my ticket at the age of 10 and I can assure you that I had several CBs.

Finally, it is not about direction finding, although that is a good point, It goes back to this:

"...it still takes
more effort to cram for an exam than it does to go down to Radio Shack and buy a citizens band radio.

It might be said that the caliber of person who can at least crack a book and memorize or take some time to learn the code might be just a littler higher than those who can't even read. Education of any sort will always produce a better individual".

We cannot expect amateur radio to stay static, but we can demand a high standard.

How many of those subscribers are unique? I know I subscribed
to both magazines. You folks aren't going to send me two copies
now are you? I suspect your circulation inflation will be minor
because I suspect most of the subscribers were like me, desperate
for any magazine with a hint of technical content.

>>Seriously, if this deal got you the rights to publish all the Ham Radio

I thought CommQuart *was* what was left of Ham Radio
after CQ got through butchering it. If the back issue library
wasn't part of the deal, that's a shame. It is a treasure trove
that still remains a valuable resource today.

Certainly, but then I was before even becoming a ham, and your
point is? or were you just trying to be insulting, as it appears to
me? You still don't deal with the issue, which is par for the course
with you. Why/how is Morse Code required in order to fufill this
mission of the ARS. Even where you seem to be trying to duck the issue
by insulting me, you seem to adknowledge that this mission can be done
without any code skill

I dispute that most earnestly. Acording to Many of the
"Procoders" the pain aspects of the Code are the point, and thus many
"Procoders" are in to the S&M aspect of Morse Code. I am simply
putting that sort of thinking exactly where it fits as beyond S&M
which involves consent and calling the abuse that it is

You don't know as quaisireligous thought when have one or see
it would appear. as towether the receiver is on, well the simple fact
that I can and do relate my responses to your statment is prof of
that. Grabled well if as I firmly believe your reciever has a bad
filter in it, (your unresoning and unreasonable support of cod
etesting) then of course anything passing though is going to be
grarbled.

I do understand what you are saying, I think, I simply think
it is wrong headed and bad for the ARS, You OTH don't seem to know
what I or any other NoCoder is thinking at all. I shudder at thought
of how comon this state affairs seems to be, and how bad that is for
the ARS

>A couple of points: 1) No one was discussing slavery except YOU.
>2). The slavery YOU brought up was NOT indentured servitude.

One so what if I brought the idea of slavery. Do I need your
permission to bring up a point.

Two it certainly is indentured servitute, as I see it, you and
the ProCoders seem obcessed with some notion that we all must expend a
certain amount (without nailing it down) of labour as part of
lisensure. since the labour is not related to any need of Licsenure
then you wish a amount of labour spent in order to be tranposted
across this magic devide that somhow exists between VHF and HF, sounds
very much like the same deal that brought many Welsh and Irish across
the devide of the Atlantic to these shores, except that it much be
preformed in advance. sure sounds like indenture servitude to me, of
course you will simply deny the issue
>> >
>> >> In adittion your assertion that having time to learn the

That's true Cecil, but this isn't about sporting goods. The primary purpose of a gun is power. (Mao astutely noted that all power flows from the barrel of a gun.) It empowers a person beyond his own physical strength. This allows him to more effectively deter evil, and forcibly resist evil if necessary.

As has been abundantly documented, killing is usually not the result of employing this tool. Most shootings are not fatal, and most uses of a gun don't involve anyone getting shot. Guns have a deterrent value many times that of mere applications of lethal force. The threat of force is often sufficient to end aggression. According to Gary Keck, this happens over 2 million times a year in the US.

The downside is that power is amoral. It can work against us as well as for us. How we choose to exercise it is where morality enters the picture. The gun is just a tool, how we choose to use it determines whether it is a tool for good or evil. Being denied that choice would truly be evil of the worst kind. It would be a premeditated license for the strong to prey on the weak. Simply stated, free men are armed, slaves aren't.

Well,

If you have high standards of integrity, you too can be a VE if you have the credentials and take the accreditation test and then you can set up your exam sessions free of all the "bogus" testing you talk about...

Of course, you do have to follow the rules the VEC and FCC have set up for this program, but I don't think that's too much to ask.

But sitting on the side lines kvetching about this when you could take part and insure that the exams you administer are of the highest degree of propriety and integrity is just bulloney.

Sorry to have missed this post Perfidious...Yes, I did study for and get my ticket and I save for and purchased my first radio for the sole purpose of community service in the form of Skywarn and storm spotting. I have gone on to providing net control for emergency nets when phone service is disabled, helping with local missing children alerts, a couple of public service events (bikeathons, parades). But, my premier love is for storm spotting and being able to be a part of a potential early warning to a community.

I think you would really enjoy ham radio. I encourage and would welcome you to our ranks. You can keep your chip, too. I did ;-) Oh, I don't talk on CB any more, because my dad has my CB radio. I plan on getting it back into the car, and I am going to use the very same antenna that I use for 10M and use an antenna switch alternately for either radio!

Hope you'll get some interest!

>Jon Bloom wrote

>Your characterization of the League's motivations is fictitious. It's true that by buying CommQuart, the League hopes expand its base of subscribers for QEX...It was not the League's intention to kill CommQuart<

Motivation has nothing to do with it, Jon (although perhaps "absorb and digest" would be a more palatable description). Regardless of any spin you might elect to put on it, the fact remains that some person or persons employed by the League has made a determination aquire and to discontinue the Quarterly title (an act commonly known as "killing a title" in the publishing industry). They have also eliminated QEX's primary source of competition and conscripted Quarterly subscribers into the League. Have they done this or have they not??

> Dick Ross had already declared it dead.<

Now that WOULD be a ficticious characterization. I don't know if you were party to the negotiations or not, but I don't think that's quite what happened (and this would not be an appropriate forum to quote Dick or discuss a negotiation such as that).

>Can you provide examples of how his conflicting interests have affected the content of QEX?<

At least you acknowledge that conflict. My comment bears no relationship whatever to the competence or integrity of Doug--I don't even know him. But consider this, Jon. Like Doug, I also design equipment for a major ham manufacturer--and I wouldn't go within 100 miles of editing an industry publication while in that role. Here's why! Suppose a would-be author submits an article for publication with a somewhat novel circuit in it. Let's say it's a lack-luster manuscript and Doug rejects it. Two years later, something vaguely remeniscent of that circuit turns up in a Kachina product and our rejected inventor cries foul. Suddenly, everone's got a problem--and a possible lawsuit. Even if the suit fails (which it probably would), the lawyers win and everybody else loses. Even the mildest appearence of impropriety can constitute a serious liability issue for all concerned.

>It's quite likely that if ARRL doesn't publish a ham technical magazine, nobody will.<

I've already had two qualified buyers in the private sector tell me they might have bought the Quarterly if they'd only known it was for sale (perhaps they were being nice, perhaps they really meant it). Either way, your statement is pure conjecture--and ignores management or sales issues

that may have contributed to the Quarterly's difficulty.

"It was going to die anyway" is not a valid justification for a 501-C-3 tax-exempt entity to step into the private sector, take over a for-profit property, create a publication monopoly, and throw people out of work in the process. At least, I doubt the Connecticut AG's office or the IRS would consider it a legitimate "not-for-profit" activity (regardless of what the League's attorney might have said about the deal).

>Is there some reason not to write for QEX?<

At the moment, that seems like sort of a silly question.

No, they haven't done either of those things.

1) CommQuart was being pruned by CQ. ARRL had no power to "kill" it,
and my guess is that they didn't even initiate the conversations
which led to the deal.

2) Subscribers to CommQuart are not "conscripted" into the league,
they just become subscribers to QEX.

Sorry your wife lost her job.

If I had waited, my Novice would have expired and it was not renewable.
It was several years later that they grandfathered the Contidionals to
General, by that time I had upgraded to Advanced.

I remember my first attempt at a contact the day my Novice license came in the mail. I was newly married and when I came home from work my wife handed me the envelope from the FCC. I opened it up and saw the license and rushed over to the rig which was a Heathkit DX-60 transmitter and Lafayette KT-200 receiver. I only had two crystals, both on the 40 meter Novice band. Remember, we had to be crystal controlled. I tuned up the rig, which was capable of 90 watts input, but carefully only loaded it to 75 watts, which was the input limit for Novice, spotted the receiver on one of the crystal frequencies. Rats, someone already on that frequency, tried the other frequency and it was clear. I nervously took the key in hand switched the receiver to stand by, switched the transmitter to transmit and banged out a slow three by three CQ, you know, CQ three times, call three times, repeat that three times. Switched from transmit to receive, listened a few seconds on my transmit frequency and then began tuning. Since Novices were "rock bound" the person who heard your CQ might not answer on your frequency as his crystals may be on another frequency, so you tuned around to catch someone calling you. Sure enough, out of the background came my call letters followed by theirs. Well, I was so shook up, just turned the rig off and got up. My wife asked me if I made a contact. I said "Naw, there's no one on the band." Hope the guy isn't still setting there waiting for my reply. Still have my Novice logbook and my first QSO was with KN5IMJ in San Angelo, Tx on 7.170 Mc. A lot has changed, some for the better, some not.

Then why characterize it? But of course, it DOES have something to do
with it. If ARRL's motivation had been to eliminate competition, that
would be one thing. But it wasn't. It simply reacted to the prevailing
circumstances to try to ensure that it could continue to publish a good
ham radio technical magazine and to try to stop the bleeding thereof.

>concerned.

I'm no expert in intellectual property law (IANAL), but if the inventor
didn't patent his invention, what grounds are there for legal action?
And if he did, what difference does it make whether it was published or
not? (Now, if his novel circuit later appeared in an article by the
editor he might have a complaint, but that could happen to any editor
who is also an author.)

Anyway, I didn't understand Doug's and the League's potential (in your
view) liability to be the basis of your questioning Doug's role in QEX.
I thought you meant that Doug's industry connection could influence his
editorial treatment of competing products. I see no other grounds for
conflict of interest, and since QEX has little if any coverage of
products per se, I consider the point moot.

>>It's quite likely that if ARRL doesn't publish a ham technical magazine,

Such difficulties, if they existed, never precluded anyone else
(including those qualified buyers you refer to) from publishing a
magazine of that type. Where are they?

>"It was going to die anyway" is not a valid justification for a 501-C-3
>tax-exempt entity to step into the private sector,

It's already in the private sector.

>take over a for-profit
>property, create a publication monopoly, and throw people out of work in the
>process.

I understand the root of your bitterness. I'm sorry Terry's out of work.
But nothing precludes any other publisher from entering the field, so if
ARRL has a monopoly, it's only because nobody can figure out how to turn
a profit in the market -- just as CQ couldn't. Other than the mere fact
of publishing its own magazine, nothing ARRL has done, can do, or would
do keeps anyone else from publishing a ham radio technical magazine.

> At least, I doubt the Connecticut AG's office or the IRS would
>consider it a legitimate "not-for-profit" activity (regardless of what the
>League's attorney might have said about the deal).

Tax law is a complete mystery to me; I leave it to the lawyers. I guess
we'll know if there's a problem if the IRS or the State of Connecticut
take action. But until that happens, I think you're just blowing smoke.

>>Is there some reason not to write for QEX?<
>
>At the moment, that seems like sort of a silly question.

You're right; I assumed you were interested in publishing technical
articles.

You *DO* live in a dream world, don't you!

Ask the patients admitted to local emergency rooms with knife, gun and fist wounds what THEY think - and THEN tell us how this is a "media invention" Your claim that all this was happening right along, but merely unreported comes from where? Do you have a source, or merely posting an OPINION as "fact"?

Would you similarly claim current shootings are ALSO "media inventions" - or does that not meet your personal agenda and predjudice in this instance?

Guns, of themselves are NOT "violent"...
Autos, of themselves are NOT "violent"...

THeir owner/operators MAY be - WHICH do YOU think will respond best to appropriate attention - the PERSON, or the mechanical device? OR, are YOU one of those suggesting massive controls and bans over 99.9% of society in the guise of "controlling" the .1% who are the real offenders?

Does anyone have any information on Amateur testing being available in the Pensacola, Florida area?

Thanks

LOL!
All you'd have to do is drop the soap in front of ZQ to find out.

Not that simple. Once you renew your license after the Epoch,
no one will be able to tell the difference from looking. I suppose
someone could come up with a clever callsign suffix to advertise
their legacy Extra status, like K6JQ/OF perhaps?

As for the grumbling about "Novxtra" and such - c'mon guys, show some
maturity. I expect this kind of "that's not fair!" bickering between
my youngest two children (ages 5 and 8), not from adults.

Calling me childish names is merely silly, but you are quite wrong
about the tape.

Mr. Hollingsworth himself has now stated that he was, to quote him,
"skunked" by the WA9KJI tape.

With all good wishes,

Kevin, WB4AIO.

Psychological profiles have been conducted on "most armed robbers"?
Most of them have been caught?

This thread no longer contains any radio content.

You must know only a small sample. If I remember correctly,
there was a number of years where one could still be
examined at an FCC office. I got my Advanced at the San
Francisco FCC office quite awhile after I was grandfathered
into General.

So Dick, are you going to carry around an internet-ready
laptop to prove that you are a pre-4/15/00 ham? How about
when your license comes up for renewal? The date on QRZ.com
will be after 4/15/00. OTOH, all I have to do is say I'm
an advanced and everyone knows I did 13wpm. :-) :-) :-)

If it walks like a duck....

>Yep.<

And if you admit it walks like a duck....it must be a duck!

>But he did put it up for sale, and because it was losing money, right?

Is it possible he offered it to the League only when he found out the board wouldn't sell him QEX (that's the story I heard)?. Sure it was losing money, just like QEX, and like Amazon.com for that matter. That's not really "dead", is it Jon?? Your interpretation is both inaccurate and mean-spirited.

>I'm no expert in intellectual property law (IANAL), but if the inventor didn't patent his invention, what grounds are there for legal action?<

He didn't "publish" it into the public domain, either, so there's always room for a claim or for plenty of bad PR. Anyway, It's not a position I'd want to be in.

Such difficulties, if they existed, never precluded anyone else (including those qualified buyers you refer to) from publishing a magazine of that type. Where are they?

It's only been three weeks, Jon, let the body cool. It sounds to me you believe the ARRL has no unfair marketplace advantage over for-profit publishers because of its ability to collect donations and dues, and because it operates unconstrained by corporat tax liability. Would that be your position?

>I understand the root of your bitterness.<
.

Thanks for the pat on the head, but once again, you've drifted into characterizing something that's not your's to name. Sure, we feel some loss, but my feelings are not what I'm asking you to clarify for me.

>I'm sorry Terry's lost her job<.

Thank you, so am I.

>I think you're just blowing smoke.<

And if I'm not?

>Is there some reason not to write for QEX?<

At the moment, that seems like sort of a silly and insensitive question to me.

>I assumed you were interested in publishing technical articles.<

I still am.

So why not just answer these question for me?

1. Do you believe the League enjoys an unfair advantage in the US amateur radio publishing market because of its non-profit status?

2. Do you believe the League move inappropriately when it purchased and "killed" Communications Quarterly Magazine for the sole purpose of enhancing QEX's position in the marketplace?

Although there will be no more Advanced class licenses issued after
April 15, those who hold Advanced class licenses will continue to do so
indefinitely if I understand the R&O correctly. I would assume that if
you do a callsign search it will continue to show an Advanced class as
just that, which would tell you that they passed the 13 WPM.

As long as I can still eat in the same restaraunts, drink from the same fountains, participate in the voting process, and pee in the same (gender appropriate) restrooms, ya can do anything you want on the HF bands. Might I suggest, though, that the HF bands are not only "ours" (meaning the United States'). There will be many, many people in foreign lands listening to your tyrades, with a very highly raised eyebrow.

No, I don't have any "office or position" with the League (other than as a member), but a perusal of their web site reveals that there are two subscription rates for QEX, one for members, and another for non-members. Thus it should be obvious to the most casual observer that a subscription to QEX does not constitute being "conscripted" into ARRL, since a non-member can obtain a subscription without joining.

No, because the publishing side of ARRL does not
fall under the not-for-profit umbrella. ARRL pays taxes
(just like CQ) on the "business" side of the house.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

Bill, nice post. This is a healthy debate and while we all may
disagree, I think it's been an educational discussion to capture
all the elements, opinions,and viewpoints.

You hit the nail on the head regarding "Bash"ing into the
hobby. I remember those yellow and black "cliffs notes" looking books
with the cloaked vampire on the front advertised in the "Ham Radio"
magazine in the late 1970's. Now this has become mainstream practice
that our national organization, the ARRL, condones and promotes.

I am skeptical that the VEC will change the question pool -- they are
a not-for-profit organization on a tight budget and tighter timeline to
get a pool put together for the new exams by 4/15/2000.
I do not think there will be material changes to the existing question
pool, nor do I think we will migrate away from the publication of the
pool answers.

The one thing about elements 1A, 1B, and 1C is that it is difficult
to "cheat" (using the word loosely, since "Bash"ing is not technically
cheating, though memorizing the answers does defeat the purpose of the
exam to a large extent). The question pool for the CW element is not
published --- is that why folks complain that it is so difficult to
pass? There
are no "short cuts" to learning the code, except perhaps writing the
individual dots and dashes on the paper and then translating them after
the exam finishes (and most VE's will disallow that practice,
fortunately)

After reading all the debate, and stirring the pot to some degree
myself,
I am left with self-resolution on this conflict --It is not WHAT is
being tested, so much as "how" it is being tested. I'd be cool with a
difficult technical and operating skills exam replacing the CW element.
With no questions published in advance, where people have to learn not
only electronics theory and rules and regs, but also GOOD OPERATING
skill. The thing that makes the hobby so great is that folks value
their HF-priveleged
licenses because they take REAL WORK to accomplish learning morse. I
do
not see the same "respect for the service" with the no-code tech exam
that
I see for the Novice, General, Advanced, and Extra. The no code tech
is
more like a drivers license exam -- read a book for a couple hours,

memorize the answers, take a test, and you are licenced. Very
different
from taking 8 to 12 weeks to master the morse code at 5WPM and many more
hours to increase speed to 20+ WPM. Lots more investment.

Now, with the ability to memorize answers, and the ease of mastering 5
WPM
cw, the self-satisfaction, feeling of accomplishment, and time invested
in
learning within the hobby is diminished to a large degree. The
result, I contend, is less respect of the accomplishment, less respect
for the amateur radio service, less respect for the license.

Death of ham radio? No. Change? yes. For the better or worse?
time will tell.

Sounds like some people are doing some useless babble!
The restructuring doesnt make it easier for people to become hams!!!
You still have to pass your no-code exam and then pass 5wpm to
upgrade!! Whats the big deal??? Clinton administration didnt do
anything for me except give me a JOB and the ability to further my
education!! When has a republican did that for you? I can agree that
ALL POLITICIANS SUCK!!!!, but think before you speak!!

I hear all stating that tax cuts for the rich cause more circulation
of us funds... Yes it does, Right into another rich persons hands...
Therefore nothing is gained!!! 0=0

Who do you think forced SDMV to cut there reg fee's? Wasn't a
republican!!!

Start Giving to the people that make the world and not to those who
rule the world!!

As opposed to labelling my comments "mean spirited?" I don't recall
asking you to characterize my spirit, either.

>>I think you're just blowing smoke.<
>
>And if I'm not?

As I said, events will tell. I'm willing to leave it at that.

>1. Do you believe the League enjoys an unfair advantage in the US amateur
>radio publishing market because of its non-profit status?

Nope. As I said, I'm no tax expert. But I do know that the government distinguishes between the sources of ARRL's income. Some are taxed; some aren't. I don't know if ARRL's non-profit status gives ARRL an advantage in publishing QEX or not, but if it does, it's whatever the IRS allows. Don't like the tax breaks given to non-profits? Complain to your representatives in Congress.

>2. Do you believe the League move inappropriately when it purchased and
>"killed" Communications Quarterly Magazine for the sole purpose of enhancing
>QEX's position in the marketplace?

Nope. I still think it was a goner anyway. Do you think Dick Ross acted inappropriately when he sold CommQuart to ARRL?

Fellow Hams:

I put together a handy chart detailing the upgrade paths, before and after the restructuring takes effect, along with my generic recommendations as to whether to upgrade or get CSCE's before 4/15, or upgrade after 4/15. Check it out at:

http://www.qsl.net/w8hp/upgrchrt.htm

Be sure to let me know of any inaccuracies or omissions.

Also, while you're there, you might check out out club webpage; it has lotsa good general ham links:

http://www.qsl.net/w8hp

And if you're going to be in the Detroit, MI area this weekend (Jan 16th), come to our hamfest! Details are on the club page.

Let nature take its course! If CW falls off the earth, then the only one to blame is yourself (not you in peticular)!! Religious CW operators that keep complaining about the new fcc restructuring and whining they may lose there band segments can only blame themselves due to the fact that they always put down the No-Coder instead of helping to teach the interested No-Coder! I am a No-Coder at present and when I hear hams complaining as such, I think why even try if this is how it is going to be on CW? I am going to get passed the code requirement and work on it to improve my speed, but I will never put down a No-Code Tech or anyone else that is interested in the same hobby as myself!! I encourage anyone to become a ham regardless if they were or still on the CB radio due to the fact that a CB Operator has more knowledge of basic radio operations than someone who hasnt operated a transceiver at all!!! I even hear others on usenet and on the ham bands worrying that HAM Radio will come another CB band, This is a bunch of bull too... When I lived in the San Jose, CA., There was 3 or more repeaters and several Frequencies in the HF Bands that sounded worse than CB Radio and 95% of the operators on these frequencies were Generals and above! So dont go flaming the No-Coders when your current problem with the General, Advanced and Extra class needs work!!!

3950.net has been updated with the following stories:

* The unidentified though admitted QRMer of 3950 who called himself "Jammer Joe," has now been identified as KB0QXY. Listen to the sound recordings archived at 3950.net and compare the voices for yourself. Thanks to those who have written to help us with this.

* WA9KJI's long history of intentional interference is documented with previously unavailable historical audio files of a David Castle "Jamfest" in five parts, including participation by KK7HO and a bizarre attack on K5MVK.

* It's now confirmed that W9ART has received a warning letter from Riley Hollingsworth over his jamming and death threats of Christmas Eve. Hear an actual sound clip of this incident at 3950.net.

http://www.3950.net

With all good wishes,

Kevin, WB4AIO.

People in this newgroup have been claiming that conditional class
licenses were less credable than a general class in the 1960's.
The only difference between a conditional class and general class
was that the general class was taken before an fcc examiner.
Many of these posts are suggesting that somehow a conditional class
license was less valid than a general class. Most people like myself
who lived in that time know better.

Ham Radio is much like News groups, once you have been there you don't return, only the good ones remain. This is why the semi loss of CW will not affect Ham Radio.
Canada - moved ahead of the US years ago. Here is what happened - The old hams did not like the new hams the new hams got tired of each other and intimidated by the old hams and now the band is very dead except for the constant few users who really enjoy the art of ham radio.

Example Same thing on the internet
Look at news groups today 3 to 20 posts per day? This actions does not make an active internet. Millions and millions of licensed ISP users and little use for the usenet. WOW

Perhaps we should have allowed spaming? I am always impressed with Hams who think talking about any product other than Icom Yasea Kenwood is simply spamming.
Open news groups versus Ham Radio
We have lost news groups in favor of mail lists which is a firm return to a form of broadcasting.

Why would anyone think it would be any different in the mode of Ham Radio.

Regarding CB , as a Ham operator I enjoy CB when the band is dead it only gets silly when the band is open. The route cause is the band should never have placed on 11 meters it should have been placed on 10 meters and the hams should have enjoyed 11 meters where they could enjoy enhanced world wide MUF conditions. Think about it.

When is Porkbutt WB2OTK going to court to get a reversal on his self amateur radio license cancellation? When will he make a post on this forum that shows he is contrite for his many rule violations on amateur radio? When is he going to serve his official time -out? Or, as he plans, will he prove that Riley is a unreliable dunce and that he, WB2OTK is a genius? Fill us in Bob!!!

History is FULL of examples of despotic governments being overthrown by their "peasant" societies with ROCKS and PITCHFORKS! That, in spite of the "better armed" forces of the governments being challenged!

Tell me exactly HOW all that fancy arillery, planes and laser bombs will attack and remove resisting groups immersed and hidden within populated areas like New York and Los Angeles? Why do those using your weak argument always ASSUME a resistance group MUST do so from an isolated and exposed position? Even OUR forefathers abandoned the "volley" method of military encounters common in early times in favor of the far more successful hidden method used by indians.

That method STILL works in places like Ireland and Afganistan... As it did in Korea and Vietnam... WHO won those "wars"? It CERTAINLY wasn't *US*, in SPITE of our "superior weaponry"!

>KD7BFX

Examine this:

Violent people KILL with knives.
Violent people KILL with clubs.
Violent people KILL with automobiles.
Violent people KILL with fists.
Etc., Etc!

WHAT is the SINGLE constant above? *VIOLENT PEOPLE!*

Work to REMOVE or modify the BEHAVIOR of those violent people, and the guns, fists, cars and clubs CEASE to be a problem in and of themselves JUST as they were in previous years! Guns were common in homes and pickup trucks during my youth in the 40's and 50's - and shootings were unheard of - WHAT has happened? Have guns themselves become more "vicious" in recent years?

Similarly, "road rage" was unheard of in those earlier years - have our roads and CARS become more "vicious" in recent years? should we seek heavier controls/bans on THEM TOO? TOO many "experts" are so hung up treating the "symptom", that they completely overlook or ignore the basic ILLNESS - treat and correct THAT, and the SYMPTOMS will take care of themselves!

But it's just not as easy as the warm and fuzzy feeling of just passing a quick new law, is it...

OH - here's a final one for you: IF absense of nasty GUNS is key to safety and security of a populace, then our PRISONS *must* be the safest places around - right or wrong? Would YOU want to move into one for the "safety" it provides you and yours?

I didn't THINK so...

Why, Jeff, are you telling us the FCC exaggerated their flat-out "Morse is almost dead" statements in the move toward a no-theory license ?

You mean the same way the FDA tells us the drugs they approve are flat-out safe when those in the know realize that's a lie too ?

Hmm, a government that lies and exaggerates to further the agenda of special interests at the expense of the individual's wishes, which are summarily dismissed in favor of government by Gallup poll.

I'm shocked. I'm writing my Congressman and "my" (Your) League.

Kissenger would sometimes play the "good cop, bad cop" routine with the
North Vietnamese, saying something to the effect that if the North didn't
follow through with an asked-for concession, his boss, Nixon, might drop
a nuclear device on Hanoi. You have to admit that we did not use our
superpower's super power on the North; if we had, the war would have
ended in an instant.

Same here. I sat for the 13 wpm General in the FCC San Francisco office in '76. The government examiner stopped me after only a few seconds of sending. I guess I had a worried look on my face from being stopped so soon, for he then winked at me and gave half a smile. That made my day. Trying to get one of those guys to smile was a feat in itself.

As for the tape, it seems that the FCC doesn't think that it's forged and I'm sure that they have much better capabilities and understanding of it than herr Stomitler and his homebrew rendition of audio analysis.
Yeah i heard Riley on 3950 the other night , he seemed to be instructing Dave a little, yes.

The FCC didn't change the written exams. Just the code part. The same
tech whiz will pass, and nitwit will fail the writtens as before. Just
the code is different.

Now I got my extra CSCEs and will upgrade when April comes around. I
probably won't operate CW in teh extra subbands, as I'll need 20wpm
to "talk" there. Unless I learn 20wpm.

Gary,

Any chance you can stop SPAMing this to every newgroup even slightly related to radio? Redirected back to .policy and .misc.

Since I saw it, I'll reply--please cc me via email since I don't subscribe to .policy or .misc.

While I generally agree with your comments, why do you have to call it "wetware conditioning"? I don't even have to check QRZ--you're an Advanced Class that never could do the 20 WPM Morse. Well now you have your upgrade...stop bashing those of us who enjoy the mode. High-speed Morse is not a Pavlovian (spelling??) response--it is a skill and an art that took much effort and practice to achieve.

I'm not arguing the merits--the FCC has decided to restructure, why not live and let live.....it's time we put the service back together rather than to continue to divide it. My comments apply equally to all amateurs and are not aimed at any particular group.

BTW, CW is the only mode authorized on _any_ amateur allocation.

>the publishing business over the notion of being a membership
>organization.

It's an interesting deal. For one thing, it appears a non-profit entity has acquired a small for-profit entity for the sole purpose of eliminating competition and monopolizing a particular niche in the ham radio publishing market. In other words, the League clearly intended to buy QEX's only competition for the purpose of killing it to ensure QEX's financial survival. I'm not sure how that type of perdition sits with the not-for-profit status the League enjoys.

Second, I'm a bit troubled by Doug Smith's dual role as Lester Ernshaw's Chief Engineer at Kachina--and as Editor of QEX. The potential for conflict of interest here is very real--and I have no confidence Mr. Smith can be expected to deal with that issue objectively.

Third, I'm troubled that the "tech" side of ham radio has now lost its only forum for authors who's techincal philosophies may not jibe with the views of the League's editorial staff (Walt Maxewell to name one).

As a memeber of the League, I'm also curious how much money this acquisition cost the dues-paying rank-in-file in a time of tight money--and at a time when supplemental requests for additional "donations" to save ham radio have been arriving on a regular basis. Will the cost of acquisition ever be made public?

And, I'm frankly wondering who I'm going to write for, now that the Quarterly is gone.

Nonsense. It will still mean a lot. Most of the things you do in life require
less effort and dedication than learning 5 WPM code and learning about the
complex arithmetic of RLC circuits, antenna theory, and propagation
characteristics, FCC rules, etc. necessary to pass the Extra test.
Considering how many people can't even be bothered to fill out a postcard to
register to vote, I fail to see where the influx of lazy new Extras is going
to come from until someone devises a way to *beam* knowledge of the
Morse directly into their brains as they sleep.

When the no-code tech license was introduced, people also
predicted the end of ham radio, and all kinds of gloom and
doom. And then what happened? The exact opposite.
It attracted a *large* number of new hams, the overwhelming majority of whom
are both fine people and fine operators.

And that's what ham radio needs more than anything else
to survive: enough good people to fill our allocations and keep
them in use. It's self-defeating to impose restrictions which probably
prevent 75% of people who would enter ham radio from ever doing so.

Overcrowded bands? Yes, In some parts of the
spectrum. For these, maybe it's time we
develop some new technologies to squeeze more stations
into fewer kilohertz instead of trying to limit the number
of hams. After all, advancement of the radio art (and not
just code speed) is part of the amateur charter.

Or to put it another way: under the status quo, instead of
dealing with overcrowded bands, in a few years we'd be
dealing with NO BANDS AT ALL.

As far as I'm concerned, you get to keep all your bragging
rights about achieving 20 WPM (or 13 WPM, as the case
may be) forever, and rightly so. It is a real accomplishment.

But 5 WPM maintains a
solid barrier against someone who won't put in the effort
to learn something difficult, while not locking out technically-minded

individuals who just don't care to
operate high-speed code, and I buy the argument that we
can't afford to turn away potential hams just because they
can't hit 13, maybe 20 WPM, but otherwise have the skills
and knowledge to be a ham...

Just my 0.02 worth, to add to a huge pile o' pennies.

Source record: 122028

I suppose if I:

Listen on a frequency for a while before calling CQ,
Respect band plans (both official and gentlemens conventions)
Listen for a while to see "how it's done" on the air,
Be curtious(sp),
Avoid cuss words,
and use common sense

I may be able to avoid being a LID. And learn from newbie errors
as I make them.

Any web site describing good operating practices?
I have an old copy of the ARRL handbook.

A wonderfully well-thought out and reasonable response.
Thank you! I share your optimism that things will work out
all right.

I also agree with a number of points AB7RS made, especially
about the tests being too easy. As I read it, it will now be up to
the amateur community to determine the contents of the
question pools, and we should really concentrate on making
sure that the questions chosen represent a proper cross-section
of knowledge at an appropriate level of difficulty. And certainly vigilance
against dishonest VEs is a good idea.

Perhaps ARRL could take up the slack in high-speed Morse
and have special awards for (say) 100 QSOs at (13, 15, 20,
whatever WPM). That would have to be worth just as much
as an FCC document, and probably would look better on
the wall, too. :)

The ham license has never been proof of electronics skill or knowledge, Dick. When you got the jobs you describe above, did you do so without any further training? In other words, did the radio/tv repair shop hire you without giving you any training after you were hired? Did the military hire you without any further training?

If they had to train you, then you cannot now claim that passing the ham license exam was evidence of electrical skill since those organizations did not take that license as proof of electrical skill. For those organizations, that license was only proof that you had some basic understanding of basic electronics and therefore would be easier to train than another person.

And the ham license of today still serves that purpose. However, it plays less of a role in the hiring process today simply because radio plays less of a role in an electronics career today. Years ago, because of the greater role radio played in an electronics career, many more organizations were willing to give credit for any radio training (no matter how basic). Since radio plays less of a role today, fewer organizations give that credit (even those who did years ago).

I also think you're being a little disingenuous here, Dick. After working at a radio/tv repair shop, graduating near the top of your electronics school class, and working in electronics in the military, I really doubt that the ham license really played that much of a role in your later employment at that "good technical job."

The simple fact, whether you want to admit it or not, is that the ham license exam has always been an extrance exam into the world of hobby radio (hobby radio, not professional or commercial radio). That is the way the FCC designed it many years ago, and that is also why there have always been other, much more difficult, license exams for professional or commercial radio personnel.

With that in mind, the existing license exam system serves its purpose well.

I understand it real well, In fact it's an 8wpm barrier but you may
have got stuck at 10wpm. Morse code does in fact have something to do
with radio, We dont send it over the phone do we? But I do agree with
most of the post in here that morse at present does not make ham radio
what it is today. Maybe 30 or more years ago, but not today. Good luck
getting passed the barrier and I hope I dont have that problem when I
get there which I know I will! :(

"Padding" the subscription list by honoring dual subscriptions with two
mailings of QEX would certainly
look good to advertisers and on the books IMHO.

Do I remember correctly that a former ARRL lab employee was asked to resign
or give
up his then part-time VHF preamp business due to "conflict of interest",
or is my
memory failing me? If so, how can a MAJOR amateur radio equipment
manufacturer now work as a
ARRL employee?

Sorry rileygotchu, you & your ilk were
quietly & efficiently trumped on this move.

The move to 14275 was both symbolic
& substantive, and is being proved over & again
each day as REAL ham radio plays out on 14275.
Good old-fashion ham talk & hams helping hams
is going on daily on 14275. No Porkbutts and
no Herbies, hate to break reality to you, they're
gone.

BRAVO to Dan & others for their ham
radio leadership on this one! K1TP is
documenting your positive efforts on his web
page!

NOW, rileygotchu, the ball is in YOUR
court! Here's a challenge for you. How about
You also showing some ham radio leadership?

YOU
can call & raise the move to 14275 by knocking
off the negative attacks in this NG and let it
get back to old fashion ham radio. So
what's your answer? Everyone in this news
group is waiting.....? Let the wars be
over, for good! both on the air and in this forum!
What say you?

How technical is it to go to HRO and buy all your equipment and go home then hook it up and be on the air? Half of the technical stuff in the exams an avg. amateur doesnt even use but im not complaining till some like this want more technical exams!! You are killing your own band buy bitching about how easy it is, but you werent complaining when you took the test. Stop preeching and start teaching!!

You are not at a higher level! You are no different than a CB'er! Only thing is you have a license to use ham bands and they dont. If every single CB op went to take a test for there ticket, I guarantee more than 50% of them would pass.The other 50% would probably fail because they have no interest or are bored and dont care for ham radio and just want to get back to there CB.

I believe the FCC did a good job except for the fact of only requireing 5wpm. Why do we need 13wpm for General and Advanced? Why not just leave 13wpm for general, get rid of advanced all together and leave 20wpm for extra. I bet that would make you feel alot better cause it would make you feel like your better than the rest because you can send faster than the next guy! Doesnt that show when you go to the cw bands and paddle away? I have interes in code for one reason only and that is to get my HF priviliges. I dont want anything to do with the CW portions on any band, just voice! Is there a problem why you can't comprehend that? The DMV doesnt make me take a test for a motorcycle when I want to drive a car!!! Nor do they make me take a test to drive a big rig either!

If I was to restructure the ham license, I would create a way that all who are intersted can get involved. The FCC started the right thing with the no-code tech but didnt finish to include voice portions of the HF bands! If I was licensed to participate in the HF bands, I would be able to listen to QSO's and practice live on the air with someone instead of having to listen to some tape or a computer program that does the same thing over and over! Did I mention that 95% of humans have a better learning ability doing it hands on? Dont ruin ham radio with meaningless phsycobabble and repeat post from other users! Post positive towards ham radio and keep it open to new users as well as old farts alike! You cant have it your way, It is everyones way or the highway! Either deal with it or sit on your frequency and listen! Either way, you are a ham and will help to keep the band alive, active or not!! Just remember, Participants Prosper!!

Cheers, Leland. Nice to see a really helpful post to a ham in need!

After a number of false starts, I followed out your equations and got the
right answer, too.

In parallel, the bigger the resistance, the higher the Q,
in series, the higher the resistance the lower the Q

So all is as expected!

A couple blank space there, Jeff. After Jim died, there were other HR editors including Rich Rosen and Terry Northup over a period of several years. Ham Radio was sold to CQ when Publisher Skip Tenny decided to retire in 1989--and shortly thereafter, Comm Quarterly was launched in Fall of 1990 with former Ham Radio Editor Terry Northup doing the start-up. Terry remained with the Quarterly until it was sold last month.

1947. Re: Amateur Restructuring Announcement - FCC screws Ham Radio!

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-13 00:00:00 UTC
From: Scott Alexander <salex@research.bell-labs.com>
Message-ID: <387E4812.DEBA864C@research.bell-labs.com>
Source record: 121603
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy

Just to give some context, I took elements 2 and 3A yesterday (1/12/00) and so have just joined the ranks of the Welfare Hams (or will once the FCC updates the database). My reason for getting the license was because I want to telecommand and receive telemetry from model rockets and the ham license seemed the easiest way to become clearly legal. I also have a PhD in CS which mostly shows that I'm persistent but also means that some professors have at least talked about technical material while I was sitting in the room.

That said, I was frightened by how little I learned preparing for the tests and how little use I expect that to have. The RF safety stuff probably was probably the most useful. If that hand't been on the test, I wouldn't have known to think about it and certainly wouldn't have known where to look for answers if I did give it a thought. I feel like I know where to find the information now.

As to band limits, I decided early on that I didn't want to memorize them and figured out that even if I got all the band limit questions wrong (as well as the questions about what was appropriate on what bands and even what power is allowed on what band), I'd still pass the tests. So I pretty much ignored that stuff. When designing the radio element for my rockets (or if I ever decide to use any other amateur privileges), I'll look up the information on bands, etc.

As to the texts, I picked up a text, somewhat on a whim at Radio Shack while I was looking for something else. I was appalled to find out that it had the list of questions with answers and brief explanations. I had expected much more general information to fit the pieces together. Moreover, I do not feel like I could go out today and choose the right rig for any given purpose (even though I do know that I need a variable frequency oscillator if I want a VFO-controlled transmitter and I know that phase modulation is quite similar to FM). I would guess that if I decided what band I wanted to be on, that Table NT-01 could be used to infer the correct choice of antenna, but otherwise I wouldn't know what choice to make. (I would know where to hook up the SWR meter, though.)

Ultimately, I guess I believe the most useful test would consist of being handed a box of parts and told to construct a transceiver and to make a successful contact with it. That would seem to cover the range of privileges granted by the license quite well. Failing that, it would seem that even with the pass-the-test type books, if passing the test required the applicant to make an on-air contact under the supervision and coaching of the VE, there would be a good opportunity to pass along some of the traditions and practices of amateur radio.

A final note: While my goal through all of this was telecommand and telemetry, my interest was piqued enough that I've started thinking about buying a rig and upgrading my (soon to be) license. Which would mean learning code (at least slowly). Suffice it to say that after a bad experience trying to learn code as a Boy Scout, learning code had been a bar to any interest I had in ham radio until the no-code license became available and even then, I had enough of a bad taste in my mouth that it took a different impetus to get me to get even that. So, even for those who want to preserve the traditions of amateur radio, you might consider how many are being kept away by the seeming insularity of some of the requirements at the same time you count the number of CBers who will be taking over the airwaves.

Mike be careful before you get someone jammed up.

I'll have to reread the NY Vehicle and Traffic law, but from
memory it simply states no one can have radios capable of
receiving police calls, no distinction whether you have freqs
programed or not, just can't be CAPABLE of receiving police
freqs.

Also, you can have scanners, etc. capable of receiving police freqs
if you have a letter from the Sheriff, etc. stating its ok.

Thats what I remember of the way the laws written, interps and
enforcement are of course another matter.

Best, RC

Mike:

Be careful before you get someone jammed up.

From memory, NYS makes no distinction and forbids
having a radio capable of receiving police transmissions,
whether or not the freqs are programmed in.

NY law allows these radios if you have a letter from the
Sheriff, etc. oking it.

I'll get the exact language if you want.

Best, RC

The ARRL has been passing out code proficiency wallpaper for eons.
w1aw broadcasts code tests up to 40wpm, other organizations do the
same thing to higher speeds. The difference between a piece of
wallpaper nobody sees and a distinctive callsign is that the callsign
is the first and last thing the world hears when you jump on a freq.

I just recently bought the Optoelectronics 3000A on Ebay for $207.50 and it sells retail for $359. I was willing to pay up to 300, but nobody else bid against me, so I got a great deal.
Take a look there and search for frequency counter. Because of their cost, i would definitely go used or non dealer.

>the advanced. I believe you can take any written test you want at any time
>although most progress logically through the elements I don't think that
>progression is a requirement.

Currently, to get written credit for Extra, you have to pass elements
2, 3a, 3b, 4a, and 4b. You have to have them *all*. If you are currently
Tech Plus, you already have credit for 2 and 3a, but you must still get
a CSCE for 3b, 4a, and 4b to qualify for the Extra. You can't skip 4a,
or any of the other elements required for the class of license you are
seeking.

After April 15, the 4a and 4b pools will be combined, and a single test
just called 4 will exist. But it will cover the same materials currently
covered by 4a and 4b. That means there will be more material to study
for that single test (the pool size will double). Today, you can do it in
two smaller more manageable bites by taking 4a and then 4b. You'll
still need to have passed 2 and 3 (3a and 3b will similarly be combined
into an element just called 3, and will also have a double pool size).

So it is an advantage to take the present written elements before
April 15th because you can approach them in more manageable
chunks than you will be able to do after April 15th. But to get Extra,
either now or after April 15th, you have to pass *all* of the written
elements. You can't skip any of them.

>today, they are nothing compared to 11. Why?

Primarily because other amateurs won't talk to you unless you use your
"true name", ie your call sign. CBers use made up handles that allow them
to basically act as annoymous masked persons in a mob. Hams won't
tolerate that. People in a mask will do things that they'd never dream of
doing if their neighbors could see and recognize their faces. This is the
real difference between amateur radio and CB with respect to behavior
on the air. Most hams proudly tell you their "true names" (often over and
over).

>It might be said that the caliber of person who can at least crack a book
>and memorize or take some time to learn the code might be just a littler

>produce a better idividual.

I don't believe that. Some of our most notorious mass murderers have
been college graduates. The Inquisition was run by the most educated
people of its day. Etc. Education and good character are not equivalents.
My father, who never finished the 8th grade, was the most honest man
I've ever known. Most saints had little formal education. Etc. The notion
that education correlates with good character is to put it charitably,
nonsense. I have only to point out that *lawyers* are highly educated
to show the fallacy of that idea.

OK, thanks for the clarification. No, restructuring doesn't change the difficulty of passing a 5 WPM exam, of course. It does make it easier to gain wide(r) access to the HF bands using modes other than CW though.

The language argument is one that keeps popping up, though no linguist would ever consider it so. CW is a code, a system that transliterates the alphabet and other symbols into sounds. Any language can be encoded using CW. Learning CW does have some of the same features of learning a language, especially in terms of learning to recognize equivalents (di-dah for 'A', etc.). But CW itself has no grammar or syntax of its own, both necessary to consider a signing or signalling system to be a language. You can't communicate with someone in CW per se, but rather in English, or Spanish, or German, which has been encoded in CW.

Passing the 5 WPM test is very much easier than passing the higher speeds. I learned the 43 tested characters at 5 WPM solid copy in 9 days, about 90 minutes a day. It took me another 4 months of daily practice at this level to get near 20 WPM. I wouldn't have had such a hard time, I think, if I had learned morse at 13 or greater from the start. CW at >10 WPM is a whole other thing than CW at 5 WPM, so it is not a simple linear progression of skill and difficulty, more nearly geometric.

1960. help Kenwood TM-V7A stays in transmit after PTT is released

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-13 00:00:00 UTC
From: R Smith <rsmith@megsinet.net>
Message-ID: <387D7D82.BF16A92B@megsinet.net>
Source record: 121732

My mobile Kenwood TM-V7A stays in transmit after PTT is released. Push the PTT briefly and it stays in transmit until I power it down. The button is not stuck. The antenna and Battery connections seem sound. The remote display and Mic have been reseated with no change with the problem. I can't find anything in the manual that would cause this if set accidentally. I've not moved the radio or antenna cables but I have been programing in new frequencies into memory. I can still program stuff and make changes to setting. So, before I do a total reset I thought I'd ask.

Has anyone else had this problem and what did you do to fix it?

K1BQT sed:

<<Hi Jon--

One more thing...

> I'm a bit troubled by Doug Smith's dual role as Lester Ernshaw's Chief Engineer at Kachina--and as Editor of QEX. The potential for conflict of interest here is very real.....<

Again, nothing personal against Doug, but someone who used to work for the League informed me of a strict League policy that stated NOBODY working for the League could be employed or engaged in any other ham radio-related activity for profit. Perhaps you can fill me in. Has this policy changed? Is Doug paid for his services or is he a "volunteer"? If he is a "volunteer", does the League believe his unpaid status makes him less a "titled professional" than a paid League staffer who might otherwise occupy the same position? Exactly what is Doug's relationship with you folks--and how much of his time per month does QEX and all related administrative matters require?

73

Rick K1BQT>>

You've gone gunning for Doug in the last dozen posts, and now you try to sugar coat it.

GET A GRIP MAN!

Face reality:

1) Communications Quarterly is defunct. It's GONE.
2) CQ Communications sold it without any stipulations of editorial restrictions to ARRL, to enhance QEX
3) the new QEX will have an editor WILLING TO VOLUNTEER HIS TIME to make the new magazine work BETTER
4) that new editor has a great rep with the ham community
5) you weren't asked to move over to the new QEX, nor were any of the editorial staff of Communications Quarterly.

Doug's doing people a FAVOR by being QEX editor.

If you don't like that--tough! START YOUR OWN MAGAZINE!

And no one gives a bean what you think about it. Or hadn't you noticed.

If you are troubled by what to do why don't you ask your confidant W8JI? He always seems to have an opinion to offer.

Move on; don't blame others for your situation. Having been your 'whipping boy' since 1996, I wouldn't want others to undergo the same abusive treatment. Perhaps Doug will go straight to legal to get you in line; IMHO at this point you owe him a public apology.

> Therefore I must ask you, Did that answer your question or was I not
> reading your question right?

Well, I understand your point, but you may not have tried this yourself.
There is a definite 10wpm 'Wall', I am there now. This is caused when you
are trying to condition yourself to use the 'sound' of a character to
recognize it vs. interpreting a collection of dots and dashes. As the mind
fluctuates between modes, you hesitate and start missing characters.

I am earnestly trying for my 13 or 20 wpm, but still think Morse code has
zero to do with radio.

Please stop crossposting this to the sat group.

Thanks

Personally I feel that the FCC went too far with their license restructuring. I am a code buff, but I realize that there are more efficient means of communicating. The real problem I have is the general "dumbing" down of the ENTIRE exam process, especially when all written questions are available to public. Is there any real technical knowledge required to obtain a amateur ticket or are we just memorizing questions an answers.

It would have been nice if the FCC would have kept the Advance and Extra class license seperate with the higher code requirement the Extra class.

Can't argue to the fact that some extra class operators are no better behaved than some of the operators on 11 meters, but overall I once considered us at a higher level.

It is NOT irrelevant. At least it wasn't a few years back. I know from
personal experience. I was hired at a job once over another candidate,
because in addition to my other qualifications, I had a ham license. I
was told by the hiring manager at the time, that having a ham license
means that you actually "live" this stuff, and don't just look at it as
a 9 to 5 job, which they thought, meant a better employee. This was back
in the days when hams still built alot of their own projects, and the

title of "ham radio operator" was synonomous with "electronic tinkerer" or "freelance engineer".

While a ham license is not a true accreditation, it tells something about the person's goals, and interests and gives the hiring manager some clues as to whether or not the person would make a good technical employee. Of course if you are in a field other than electronics, then it's probably meaningless.

Today, with the preponderance of appliance operators, who really don't know much REAL theory, I would tend to agree that the license no longer stands for much.

I have a complete S-100 desktop box.
It has a Z80 processor at 6MHZ and
64K of ram and dual 8 inch floppies.

It worked the last time I plugged it in.
That was about 15 years ago.
I can't remember the brand.
It was not one of the early famous brand names.

Anyone interested?

Tim I agree that the published Q and A pool didn't help at all, on our club reflector we've been talking a bit about 8 and 9 year olds getting General thru Extra tickets. While there are a lot of really smart kids out there I have a hard time believing that the number of kids that are getting tickets really understand some of the math involved in the higher class licenses. What REALLY make me unhappy is some of the study guides that key in on memorization techniques like:

Remember if the inductace is 37uh then the answer is A, if the inductance is 25uh then the answer is B.

Hans is a former ARRL Division Vice Director. As per a policy of the
ARRL Board, former officers and directors can continue to use the
arrl.org domain in their email after they leave office.

I would answer some of the questions raised in this thread, but I really
don't know the answers and think it best not to speculate.

Hello,

Please understand that I am not saying that you did not put out any effort to obtain your license. And I am not saying that under the restructuring that a good deal effort will not be required to obtain a license of any class. For many people, just being able to learn the code a 5 WPM requires a lot of effort, I know it did for me when I was starting out in ham radio.

As far as societal examples, I will offer two, one general ond one specific.

1. Look at the CB bands today and compare them to what they were at the inception of the service. as a practical matter, no license is required today and there is little or no enforcement.

2. In the company where I work, company vehicles are provided to a number of employees. Over the years, we have had many examples of employees abusing the vehicles and just recently had one who ran it for several weeks with the oil pressure light warning on, until he locked up the motor. Would he have done this with his own personal vehicle which he purchased with his own money? I don't think so. The vehicle was not his,

he had no personal stake in it, it he wrecked it, there are always other vehicles that would be provided to him if it stopped running. I could add a third example of public housing, but that subject has been beat to death over the years.

As long as there are licensing requirements in the ARS, you will have a personal stake in the license you hold. Hopefully, there is some pride of accomplishment, and some pride of ownership.

The Technician is by definition, an entrance level exam, and has been for 10 years. The General and Extra are more than entrance obviously, since they require more knowledge to pass. However, they are entry levels to their enhanced privileges. In no sense are they graduation certificates, or proof that someone has achieved something great in technology development. Amateur radio never was meant to be a college degree. The only applicability of an amateur radio license to the commercial world that I know of is that an Extra will get you a *Third* class NARTE Technician certificate.

Dick,

Do you really believe that?

Maybe I am very wrong about this, but i tend to think that people with CW interests even if they come in the service at 5 WPM will certainly pursue that interest. Most of us older hams probably came into the service as Novices at 5 WPM (although I realize that there are still many who came in befor the Novice license was available). Yes, unless you got the old Technician license, you had to increase your code speed in order to get a Genral or higher class license, but there was no rule that mandated you to ever use CW on the air again after you passed the test, but for some reason, CW activity still remained. I predict this will continue to happen.

I didn't realize the license manuals were even approaching it that way. I obtained my General when I was a freshmen in high school and the Advance took me two attempts in my junior year. I can remember all the math formulas I had to know and it was no easy task! In addition the study manuals (at least the ARRL) approached it by presenting the material not the questions. I felt as though I actually learned something and was proud of the achievement. I have to admit the code was the easier of the requirements for me. Just practiced a lot.

Well, sort of true. There are still states that prohibit scanners, and
HAMs as a 'general' rule are exempt at the state level. But NY for
instance will allow HAMs to have scanners, but unless something
has changed in the last 2 years, they consider HAMs in violation
if they have any police frequencies programmed into their rigs or
scanners.

Of course, if the HAMs are tracking a police jammer, with PD knowledge
and/or assistance, there shouldn't be an issue.

Back in 61 I was issued KN8BHH as a Novice, then had K8BHH. Trying to support ham radio on a paper route was tough, so I stayed on CW. Got pretty good at sending H.

Should Mr. Baxter prevail and does indeed return to 14.275 then it will
not be a problem. You see we have already discussed that and decided
to just standby when he comes up.

And a bit of information. K2ECA is KA2ECA, WA4JYZ is W4JYZ.
And BTW anyone is welcome, no matter what prior affiliation. As long
as he keeps it to good amateur radio practice, and try to avoid the
constant bickering prevelant on 313.

As for being "porkbutt suckups"...considering he had NOTHING at all to
do with this, and is not on the air, I don't see any connection at all.
We have moved to hopefully contribute towards an end to this stupid on
the air bickering. If you want to continue this "radio war" than do it
elsewhere. 14.275 is open to ANY licensed amateur.

The best CW calls have a lot of "average power" in the suffix.
That means calls with T, M, or O, like N2TT, K0TO, W4MM.

Avoid S, H, V, B (like K0HB). The dits get lost in the noise.

Hi Ed--

>I would answer some of the questions raised in this thread, but I really
>don't know the answers and think it best not to speculate.

Don't blame you. It's a tricky issue. I need to wrap it up as well, so I can move on.

The issue at hand is whether or not the League acted ethically as a non-profit entity when they purchased Communications Quarterly. The issue ISN'T if CQ acted properly by selling it--we all agree they did. It also isn't whether the Quarterly was experiencing financial difficulty at the time--we all agree it was.

Jon's original response to me was that it was NOT the League's intention to kill the Quarterly--and that Dick Ross had "declared it dead" already. This response is, of course, rhetorical nonsense on a number of levels.

The facts are that what the League purchased was an ongoing entity with an issue in final preparation, with a backlog of accepted manuscripts, and with an intact subscriber list containing the names of people expecting to receive that next issue in progress. Of course, those subscribers will never receive it. Why? Because the League (not Dick Ross) "killed" the issue. Indeed, those subscribers will never again receive a copy of Communications Quarterly...because the League (not Dick Ross) "killed" the title. You'll be getting QEX, folks, because the League bought and "killed" the Quarterly name. Their intention was never to do anything else.

The League's ethical stance on the purchase appears to be: "Well, it was okay to purchase and kill a competing journal because it was going under anyway--and we're losing money too!". Consider that logic. If I rob a man in the street and justify the act by saying the victim was only going to spend his money sooner or later anyway, am I absolved? If I shoot my business competitor in the head, then tell the judge he had Diabetes and would probably have died sooner or later without my intervention, do I get to go home? Of course not. The condition of the Quarterly prior to its sale is both irrelevant and inadmissible.

Of course, it isn't against the law to "kill" a magazine. CQ killed Ham Radio before launching Comm Quarterly--it happens a lot in the publishing business. But the League isn't just "any" publishing business. The QST masthead proudly declares the ARRL to be a 501-C-3 exempt organization--of, by, and for radio amateurs. Minor tax-law jockeying aside, the ARRL also proudly declares itself to be the publisher of QST and QEX, and the League's BOD pulls the strings. Ethically, the League is a non-profit entity. It

(and we as League members) enjoy many benefits as such. So, the League's BOD walk on pretty thin ice when they adopt a policy--albeit formal or defacto--of using membership money to purchase competing for-profit properties with the express purpose of enhancing revenues through the elimination of competition. That, Bill Gates lovers, is called a monopoly. As far as I know, a purchase like this has never occurred before in the history of the League, and I hope to hell it never happens again.

I've also raised the issue of Doug Smith's exposure to conflict-of-interest liability as QEX Editor while simultaneously holding an executive position with a company in the industry. Jon acknowledged those conflicts do, in fact, exist--but adds that Doug is doing a good job, so the League doesn't care. While the League likely bans its own employees from participating in similar relationships, it is unknown if Doug actual works for the League or not. If he's a "volunteer", presumably his employer (a ham manufacturer and regular advertiser) isn't bothered by Doug's liability exposure either--and willingly provides defacto subsidization of Doug's effors on the Leagues behalf. If that's the case, of course, the League enjoys a decided advantage over "for-profit" publications who have to pay their editors. As a League member, I think I'd like to know exactly what the League's arrangement is with Doug.

To conclude, this "editorial comment" is about ethics. Is the League beginn ing to stray over the edge into areas of unfair competition, and does Mr. Imlay need to pay a little more attention to the Leagues mission ve. what the League can "get away with"?

It is, CQ bought Ham Radio after Jim Fisk's death and right after I
renewed for a year, and immeadiatly cease publication. Giving Ham Radio
subscribers CQ in place of. I called and canceled and got a prorated
refund.
Then CQ later started Communications Quarterly.

An astute comment, I must say ... even if we do something that
is CLEARLY for the good/common interest of all hams, including
our members, I'm sure there will be some who will flame us for it.

The key point is to not confuse us with folks who actually care
what such an irrational minority of flamers might say :-)

I don't think you should be flamed at all, Carl. I think you should be congratulated - for not calling the ARRL "a bunch of luddites" again! An admirable display of restraint. Saying "me too" is always important - especially when the FCC is listening. :-)

Congratulations!! Well done. It is an NCI document that I can support.

Good news!

Most of the Cancelled amateur, WB2OTK deciples, such as K4RUB, VA3GJB, "BADBOY" NU5M K2ECA,WB5jik,W4NTI,WA4JYZ KE4TEW,K2JW, NK4D the "LAWYER" and their unidentified qrmers and suck boys, (you get the picture), have moved to 14275. These hams have decided to move to this frequency to get away from 14313.

We wish them well in their new home..Let us all hope that these amateurs will find each other agreeable ,stay there and multiply in numbers.

Meanwhile 14313 is the calling and rag chew frequency for the rest and best of the amateurs on the twenty meter band. Join us, open daily when band conditions permit. Thank you Mr Riley Hollingsworth!!

OR, as has been repeatedly pointed out, if a guns purpose is "only to kill", the VAST majority of them are hopelessly FAILING their primary reason for existing - and THAT INCLUDES military and law enforcement "killing hardware"!

If the total number of guns possessed by military and law enforcement were totalled, and then compared with the annual numbers of deaths caused by their use, I have little doubt we would ALL be convinced that "nasty guns" are seriously failing as "killing devices".

TWO basic classes of gun haters in our world - one is those genuinely frightened and relatively ignorant of guns and how they are employed by MOST citizens - so they react with hatred and panic at the mere MENTION or SIGHT of a gun, and will go to great extremes to demonize and eliminate them.

Second are those who have ulterior motives, and see some form of benefit to THEMSELVES if guns can be eliminated in the hands of ordinary citizens. These are varying types of criminals who prefer unarmed victims - and politicians who realize that as government has become more grasping and demanding of its citizens, THEY TOO stand to benefit from the increased security an unarmed society provides as they continue their confiscatory ways. In earlier times, our government asked less of its citizens - and feared resistance far less than today, when they no longer ask, but DEMAND! And they have NO qualms about using group number one up above as their willing tools to accomplish their disarmament goals. And BOTH groups receive the complete and free assistance of a liberal media in advancing their agenda.

Hi Jon--

One more thing...

> I'm a bit troubled by Doug Smith's dual role as Lester Ernshaw's Chief Engineer at Kachina--and as Editor of QEX. The potential for conflict of interest here is very real.....<

Again, nothing personal against Doug, but someone who used to work for the League informed me of a strict League policy that stated NOBODY working for the League could be employed or engaged in any other ham radio-related activity for profit. Perhaps you can fill me in. Has this policy changed? Is Doug paid for his services or is he a "volunteer"? If he is a "volunteer", does the League believe his unpaid status makes him less a "titled professional" than a paid League staffer who might otherwise occupy the same position? Exactly what is Doug's relationship with you folks--and how much of his time per month does QEX and all related administrative matters require?

I am suggesting that morse code is another language in itself, and
learning a language is harder than improving the language skills!
The post was to explain that The restructuring
isn't changing the difficulty level of passing 5wpm.
In other words, Passing 5wpm is harder to pass than 13/20 wpm.
Therefore I must ask you, Did that answer your question or was I not
reading your question right?

Like in a previous post of mine, Actions on this frequency are mostly
from those with a General or higher ticket holder. Not Bootleggers
either. Thanx, Your Point is well taken as it seems to me we both
agree here!

None of which hypotheticals have anything to do with the case at hand.
Of course, it's much more fun to put the argument in draconian,
outrageous terms, shunting aside all consideration of circumstances!

: Would I get it back if I did? No If they did recover it would it be
:returned to me? probably not. (at least for some time (evidence etc))
:
: Will someone steal from me here? NO
: Would my neighbors protect my property? YES
: Would they call the police? uhm???
:

: > While an extreme scenario, you may feel differently about
: > that jammer disabling police frequencies if the ability of
: > the police to save someone's life (maybe your own or
: > someone you love's) was impeded by some jerk thinking
: > he/she is being funny.
:
: I think that I have paid dearly over the years, the police should (and
: probably do) have the equipment to do the task themselves. If they do not,
: maybe the police agencies ie: CHP should not spend $3000-$4000 each on
: light units for their cars, and invest in fox hunting equipment.

The amount of training that it takes to be good at DFing is not something
that most law enforcement agencies want to spend for. What makes a
good street cop isn't the same set of skills that it takes to do the
services
that hams provide. The same goes for the large number of military
reservists
who are providing intelligence gathering assistance to the police.

: possibly the US Border Patrol could loan them theirs, as they do not
: really have need for it.

The Border Patrol has a Signal Intelligence gathering units?

: Either way, I use the bands allocated me to converse to/with others, to
: learn, and to save myself phone bills, postage...etc. Not to specifically
: help my, or your community. I did not intend to become a public servant.
: Did you study for, and get your ticket....did you save, purchase or build
: your station to help the comunnity? Was that you're initial intent? We
: have a neighbor lives a few miles away, my daughter talks to her on 11
: meter. Our neighbor is a toll call.

The primary mission of the Amatuer Radio Service is to provide
public service.

: My father lives in CA as I used too. One of us saves money with radio.
: I've met some real interesting folks on the air...that was my intent.
:
: Somehow I think that's okay. Yes?
:
: I suppose if others want to do other things that's okay too. Your point
made.

As if you will be able to stop us.

: |> ...
:
: Well, foxhunting has no necessary legal connection with having a
: Ham radio license. The ham license is related to your permission to
: transmit. Anyone can listen without a ticket.
:
: The License may make the results of your foxhunting carry more
credibility,
: but anyone could take a scanner, antenna, attenuator, etc. and hunt down
: a signal.
:
: (Yes, I know some states restrict listening to police frequencies, so
: this doesn't strictly apply everywhere.)

Hams are exempt in all states from laws forbidding scanners in cars.

: A large part of the difficulty in hunting down a jammer can be to
: 1) find a place where you can hear him on the input frequency if
: he's jamming a repeater or 2) getting close (e.g. an apartment building, a
: block, etc.) If I were to be involved in such a case, I might try
: to just narrow it down to a small area and leave it to the police
: to narrow it down from there. I wouldn't want to have the court
: case depend on me as an "expert witness".
:
: The other worry would be if you gave the police some good information
: and they then go after the wrong person. e.g. if they break down the
: door of some innocent nearby person who has an antenna, but isn't
: the person doing the jamming.

I dare say it was and "ordeal" because the person taking the exam made
it one, not the FCC examiner. Only natural to be nervous about the test,
especially when you have driven 200 mile to get to the FCC office. You
certainly hoped to pass so you did not have to make the trip again.

>Hams are exempt in all states from laws forbidding scanners in cars.

Well it has been some time since that was raised, but the
reality is that the federal preemption is for transcievers...NOT
for scanners. Now the argument can be rasied as to a
scanner being just part of a transciever, but that hasn't been
tried anywhere that I know of.

The few states that forbid scanners in cars all exempt hams
in the state law itself...NOT by federal pre-emption.
Most states do not have any laws against scanners
in automobiles by anyone.

> 73, Cecil, W6RCA http://www.mindspring.com/~w6rca

I think there's widespread confusion between the ticket (and associated
callsign) and the hard work it may have taken to earn it. It's the FCC's
job to make sure you meet some *minimum* requirements they've set up
to get on the air, and it should be the ARRL's job to recognize and award
outstanding hams
for their achievements.

It should be up to the ARRL and not the FCC to develop awards for
hams for proving you're achieved some noteworthy accomplishment.
For example, they should have awards (if they don't already) for
finishing (say) 50 QSOs at 10, 13, 15, 20, 25, 30... WPM, presumably
without a QLF. :) There are already awards where you can nominate
exceptionally
good operators, and presumably public service awards would work the same
way.
I see no reason why you can't brag about a 30WPM award the same way as you
would a DXCC or your 2x1 callsign. Am I totally all wet on this?

The bottom line is the FCC doesn't care how hard you worked,
nor are they interested in certifying your skills to other hams or
impressing your buddies with your high-class callsign.
They just want to be sure you pass muster. They issue the
ticket as a permit to allow you on the air, plain
and simple. You meet some minimum standard, and you're in just the
same as the guy who got every question right and 100% copy on the
code test. (This "Pass/Fail" phenomenon at the DMV explains a lot about
what
passes for driving in Calfornia, but that's a whole other digression.) ;)

If the ARRL was so eager to nurture and protect the Code, they ought to get
off their
collective butts and find ways to recognize hams who DO use the code. The
FCC
doesn't (and shouldn't) care about our internal squabbles.

: I hope you are all correct.
:
: I love CW, it's all I use, and I will be sorry to see it go as a
requirement
: (if it ever does). If CW doesn't make a difference, will someone tell me
: what it is that keeps the bands from sounding like 11 meters? I have seen
: them (bands) through about 24 years of change, but for as bad as they seem
: today, they are nothing compared to 11. Why?

The FCC does enforce the rules with respect to the ham bands. Mostly
because hams started calling their congressmen and demanded enforcement.
It is the large number of hams who believe in the rule of law, who are not
so
independent as to go out of their way to harm others.

: Sure there are people who Bash book and garbage in garbage out throught
the
: classes, but even most of them retain something. In fact it still takes
: more effort to cram for an exam than it does to go down to Radio Shack and
: buy a citizens band radio.

There is a cost in being a ham. Even the written test is not that easy.

: It might be said that the caliber of person who can at least crack a book
: and memorize or take some time to learn the code might be just a littler
: higher than those who can't even read. Education of any sort will always
: produce a better idividual.
:
: So I hope you are all correct. I hope the code doesn't make a difference,
: because once the precidence is set to do away with it, any type of theory
is
: next. Then what will the difference between the amateur and citizen's
radio
: services be?

Do not bet on that. That is just being bitter.

Well, you managed to squeeze "draconian" and "outrageous" into the same sentence--a spicy and melodramatic characterization, for sure. But, unfortunately, these "hypotheticals" I presented are not all that outrageous at all. Has the League ever--in its history--purchased a competing magazine before and blown it DOA? I don't think so. So what we have is not a "forecast of hypothetical activity", but rather a concrete act by the board that constitutes both precedent and defacto policy. The board has already done it once, and we have no reason whatsoever to believe it won't do it again. None.

The FCC is enforcing the law with respect to the hams bands. Too many
hams called their congressman to bitch about the lack of enforcement. So
now we are seeing the bands being cleaned up.

For the most part, hams are not a bunch of anti social misfits who
are out to harm others. Hams respect the law.

: Sure there are people who Bash book and garbage in garbage out throught
the
: classes, but even most of them retain something. In fact it still takes
: more effort to cram for an exam than it does to go down to Radio Shack and
: buy a citizens band radio.

Amateur Radio costs you. But for that cost, you have more freedom
to experiment than the other services.

: It might be said that the caliber of person who can at least crack a book
: and memorize or take some time to learn the code might be just a littler
: higher than those who can't even read. Education of any sort will always
: produce a better idividual.
:
: So I hope you are all correct. I hope the code doesn't make a difference,
: because once the precidence is set to do away with it, any type of theory
is
: next. Then what will the difference between the amateur and citizen's
radio
: services be?

Don't be bitter. Theory is not going away. If anything, we will be
more like the GROL than CB.

2034. Help and Part Kenwwod 732A

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-13 00:00:00 UTC
From: "Joe G. Wesley" <risd@flash.net>
Message-ID: <387D5391.F370CE68@flash.net>
Source record: 121808

I recently bought a Kenwood 732A where the original owner had cut the wire to the remotely installed head. He had lost the short wire. I spliced the wires back together and the radio works fine with two exceptions:

1. The VHF squelch control does not function at all.
2. The display in the UHF indicates the transmitter is transmitting at full power level when it is not transmitting. When you adjust the UHF squelch knob the "power" level decreases until the squelch opens up and the busy light appears.

When I spliced the connecting cable the wires were twisted and there was a good shield. Would the lack of twisting and the lack of shield at the splice be the problem??

Do you have a short connecting cable for the 732A? If so will you sell it. Please contact me at mailto:risd@flash.net

Thanks joe N5RMA

I agree. In fact the biggest lids are often the Extra Class hams.
Look at the number of Extras who have been arrested by the
FCC (or at least fined).

: If ham radio was going to sound like cb, It would have a long time
: ago. A Ham License doesnt protect the Ham bands from Jammers or
: maliscious interference. Now that the No-Code License has been in
: affect, I have seen alot of CB operators turn to Ham and as a result
: to never return to CB. I met hundreds of users on CB and not once met
: one of them that had jammed Ham bands. When I asked A few CB operators
: I knew in the bay area about wanting to take there test, Only 1 of
: them didnt want to take it. The remaining 4 people including myself
: went to Fremont VEC and passed our test. As a result of alot of CB
: Operators getting ham tickets, I noticed a dramatic increase on the
: UHF and VHF bands due to the fact that alot of CB operators know just
: as much as an Advanced or Extra class operator. A once CB operator and
: now ham (n6yem) was a prime example of this, He totaly amazed me at
: some of his theories and projects that I had to learn more! I thank
: N6YEM for encourageing me to get my Ticket and upgrading as well as
: many other Hams and CB operators for helping out and answering my
: questions as well as answering a few questions of my own!!!
:
: Don't Discourage, Encourage !! Dont Force it, Endorse it!! CW!!

Hi Riley,

He's not gone. I first received an email from him about how to solve some AOL problems -- something about a dialog box that pops up every few minutes, something about how to do online posting instead of offline posting, plus a bunch of other questions -- I know nothing about AOL so I couldn't answer any of his question. Next email I received was how to access the mindspring.com newsreader, and asking for a complete list of the rec.radio.amateur.* newsgroups. So I would guess he left AOL only because he got sick of it.

It's interesting to see how speculation develops into rumor then into "fact" on here.

They are not any different.
The CB Generation was died in 1979...

Restructuring is no NO-CODE .
The FCC simply adopted the ITU recomendations for Amateur Radio.

Ham Radio will die its own death if we don't start using the spectrum.
Comercial interest money talks. And the VHF+ spectrum that the Ham's
have is worth Trillions of dollars.

Really? Name a few I am honestly not aware of them. name me
somethignwhere it is valued becuase of the effort involved, notbecause
of the achivement itself. I doubt you will come with anything that
clear cut. I place value based on usefulness as do many people. My
tech licnese is not valued by me based on the effort taken to achive
it, but on what it allows me to do. the only place where that effort
factors into my thougfhts is along the lines of "where can you get
this much value with so little effort to obtian" or the motivie of
profit, one the underling modes of human behavoir

The fact that most hams are law abding types, Indeed it merely
the fact that I a tech am lawabiding that keeps me from using Ham HF.
Frankly from some tapes I have heard some parts of those coded HF
bands sound a lot worse than anything I have ever heard on CB

The fallacy of your view is in thinking that only the VHF/UHF bands are at risk. That is not true. With the soon to be deployed compatible digital AM broadcast systems, SW broadcasting has become a very attractive proposition for a large number of media players. That will inevitably lead to pressure for more SW broadcast spectrum, and our HF amateur bands are a prime hunting ground for that.

This new technology is incredible. It gives an AM station a more than equal standing with a FM station. There are no fades, no static, no picket fencing, and stereo audio of better quality than is available from FM broadcast. It does this while providing a larger grade A coverage area than FM, and while not noticably impairing reception by listeners with ordinary AM sets.

My company has already purchased AM stations in 18 of the top 20 markets in anticipation of the deployment of compatible digital broadcasting, and we're actively pursuing more. (As most people know, AM stations are dirt cheap right now because FM has been eating their lunch for so long.) We were in on the development of this technology from the beginning, and performed the original FCC field tests of it at our Cincinnati station. The major broadcast receiver manufacturers have already developed chip sets for this technology (adds about $5 to the cost of a car radio), and will be rolling it out in their new models as soon as the FCC gives us the green light (expected very soon).

We are also eyeing SW licenses as a way to gain more market penetration at a relatively low cost. Compatible digital works on SW too, and very very effectively. We are not alone in considering this option. Most of the major media players are also considering this alternative to satellite DAB, especially to penetrate markets in less developed countries where a saturation broadcast environment doesn't exist. The demand for SW broadcast spectrum is almost certain to explode over the next decade, and hams will feel the pressure.

A revitalized SW broadcast industry is not the only threat amateurs face at HF. Point to point digital services are also growing on HF at a phenomenal rate. Globe Wireless (and others) have already taken over the spectrum formerly used for maritime CW, and have petitioned the FCC for more. Use of digital technology has improved reliability and decreased costs sufficiently that HF has once again drawn a lot of interest as a way to cheaply deliver global point to point messaging services. (The little LEOs haven't gotten their cost structures under control and are now in considerable difficulty. They are likely to be aced out of this market by newer technology on HF if spectrum can be found for it.)

There's an awful lot of money riding on these ventures, and potentially a whole lot more after the impact of these technologies becomes more widely understood. By the end of the next decade, amateurs will be faced with strong pressures on their HF spectrum thanks to technological changes most amateurs don't even know are occuring.

We will continue to face pressures on our VHF/UHF spectrum too, of course, but the refarming of the analog TV spectrum scheduled to begin in 2006 will tend to relieve some pressure there. (We will continue to take hits on our upper GHz spectrum, but we can't really complain about that since we aren't using it.) The next big battlefield that most amateurs will care about is likely to be where you seem least likely to expect it, probably because you haven't kept up with the technologies that will bring it on.

Meanwhile, our HF amateur population has been aging rapidly. The average General today is 63 years old. That's a serious concern. At the end of the next decade, today's average HF amateur is going to be reaching the age of mortality. We're looking at having to replace a huge number of HF amateurs over the next decade to just maintain the band occupancy we have today.

To put this demographic situation is perspective, in 1963 the average amateur was 27 years old (note that this wasn't a normal bell curve, it was heavily skewed by large numbers of teenage amateurs). Amateur radio has gone from a young man's activity to an old man's activity. Now the average age of our population as a whole has been increasing over the last 40 years as the boomers have matured. But the population average has not greyed as strikingly as has that of the average HF amateur. (The population average is now 35.2, up from 32 in 1960.) We've gone from a demographic curve heavily skewed toward the younger end to one that is very heavily skewed toward the older end in amateur radio. That's not healthy for the long term prospects of the service.

I know I've beat this drum before, but the numbers are shocking. Something had to be done. Fortunately the FCC restructuring is a step in the right direction, as was the change to Tech a decade ago. But it is likely not going to be enough. Goverment licensing reforms alone, necessary though they were, aren't going to solve this problem. We're going to have to aggressively promote amateur radio, and recruit as many younger people as we possibly can over the next couple of decades just to keep amateur radio relatively healthy and in a position to resist the pressures which are looming on the

horizon for *all* of our spectrum.

The FCC has just made our job a bit easier by removing a perception about amateur radio that has dogged us for far too long that we're trailing edge oriented, but we're still going to have to mount major efforts in order to preserve what we have. I hope we can do it. If we can't, then I guess we won't be able to begrudge the loss of our spectrum because we won't have the numbers to keep it productively filled.

At least I don't feel so much like a voice crying the wilderness anymore. In my talks with some ARRL BOD members (and others in other amateur organizations around the world), they are as alarmed as I am about this situation. I don't think that a clear vision of what must be done has yet emerged, but at least it is now on the radarscopes of some of the people with the leverage to do something about it. I hope it is something better than a new Archie comic book.

My personal pet idea is to bring back what we know worked before, middle school radio clubs. That was a major way kids came into amateur radio in the 50s and early 60s. But that requires some old farts to get off their asses and actually do something constructive by acting as sponsors and elmers. I wonder if enough of us care, or even remember enough of what it was like to be a kid to relate to these prospective amateurs.

Looking for the SP-102 speaker for the FT726R radio. Anyone got one for sale? Also looking for tone boards and 440 module for same rig. Any info on locating the above would be welcome.

Thanks!

David M. Brodbeck wrote:

> The only purpose of a gun is to kill.

You couldn't BE more wrong!!! It is FAR more common that the mere presence of a gun serves to *prevent* not only possible killing by a perp, but heads off any probability that he will even consider making such a move.

Only a tiny percentage of gun owners ever use them for reasons other than just presence. It is a rare time indeed when one finds it necessary to do anything more than just show a weapon. Lets face fact, crooks aren't heros, the last thing they want is to get themselves shot. So they'll flee the scene macht schnell when the hardware shows.

Almost all cops -by far the vast majority- serve their entire career without ever cracking a cap in combat. The fact that the gun is on their hip is enough - nearly all the time it gets to stay there.

On the other hand, a recent TV special showed an interview with a hoodlum in England wherein he stated that the ban on privately owned guns was a very real boon to the crooks, who can get a gun anytime they want, legal or not. And they know that their law-abiding victims won't have one for their own protection. Makes his life VERY easy. And if he should decide that leaving witnesses is bad for HIS future, well, tough stuff for you, Pal.

Ths sad part is that *anyone* could be so dense as to believe that smuggling guns is any more difficult than smuggling dope, and it's no secret how much of that stuff gets into ANY country. In the USA, trucks cross the border by the thousands, mostly unchecked. Thousands of miles of shoreline and frontier are almost wholly unprotected. Countless thousands of railroad shipping containers enter the country daily, with only token numbers (1 in 10,000) being checked for content.

And it's ludicrous to assume that when any law is placed on the books that the crooks would just voluntarily comply. Instead, they're laughing at us - or you would prevent everyone else from defending themselves.

I bet you didn't know that the Supreme Court once ruled that the police are not obligated to protect individuals, but only society as a whole. So where does that leave YOU for protection? And even if the police were so obligated, and I can assure that most of them feel that they are, how many would it take to adequately protect everyone? Do you think it likely that enough could ever exist? When was the last time you heard of an officer being present, at the right time, to thwart a serious crime?

Banishing private gun owership is the province of fools.

>today.

Very well said, Phil. We need to reinvent amateur radio, or at least make it possible for younger people to reinvent it. An organism that doesn't change is dead. Change is life. We have to embrace that notion if we want amateur radio to continue to live. I don't think we have a clear vision of where we need to go, crystal ball gazers rarely do, but we have to remain open to change and new ideas and new ways.

We have to encourage the people who want to try new things, do old things differently, etc. We shouldn't totally lose sight of where we've been, but we need to fix our eyes on the future toward which we're going, like it or not, instead of constantly looking back over our shoulders and trying to live in a world that used to be.

I just made a post about some challenges we will face in the next decade. The world in which we live is changing faster than many of us seem to be able to understand. But all of us will be impacted by those changes, and we need to be ready to meet them. It is said that armies often prepare for the last war, and get blind sided when the next one doesn't follow that script. We can't afford to let that

happen to us.

The ARRL has a committee looking into the implications of technological change on amateur radio, but I don't think that they have really grasped the scope and pace of change that we really face, or the social and political impacts that change will have. Technology doesn't exist in isolation. Every technological change has sociological impacts, sometimes impacts that are very different than we expect. Even if we reject the technology, others won't, and it will impact us nonetheless, often from directions we don't expect. We have to be flexible, climb up on the crest of the wave and ride it where it takes us.

It is sometimes hard to tell whether someone is leading, or just running to stay ahead of the mob. I think we're going to have to do a little of both in order to cope with the very rapid pace of change that's going to happen whether we like it or not.

I don't have a Five Year Plan. I can't point at the next Great Leap Forward. The ex-Soviets showed us that sort of thing doesn't work. There are a few things we know. It is better to be strong rather than weak, swift rather than slow, flexible rather than rigid, etc. All I can suggest is to do the best we can, and hang on because its going to be a hell of a ride.

> Totally irrelevant.....a ham radio license is of no commercial use.

It's a certainty that it will never again be, but it has
not always been so. As a high school kid I got a job after
hours repairing radios and TVs *ONLY* because I was a ham. I
got into military electronics, and graduated near the top of
my electronics school class, because I was a ham. Later I
got a GOOD technical job in radio - because I was a ham and
had used that fact to build my resume.

> This is *Amateur* radio, not commercial/professional/broadcast/PCS
> whatever.

Yep. Only a mere shell of its former self.

> The license is NOT a graduation certificate, but rather an entrance
> permit to the hobby/service.

You jokers have regurgitated that tired old bromide until
even the kids at the FCC believe it, now. But Hey, what do
they know, they just work there, right?

If you prefer to view your EXTRA class license as an
"entrance permit" to the hobby, it tells me that you got it
for free. Most of us did not, and DO NOT. The FCC, at least
30 years ago, considered an EXTRA class licensee to be the
only expert class of ham. The fact that he was knowledgeable
enough to score a passing grade on their tests was proof
enough.

Congratulations on changing their minds. Henceforth there
will never be anything other than "entry level" class hams
licensed. And that's exactly where most of them will stay.

The reason for the 5wpm is that the international telecommunications
union determine the international requirement for morse code for
amateur radio. This will probably drop to zero in the near future.
The FCC is simply getting ready for the change.

As for the written tests...possible they will take up the "slack".

The new rules are effective 15 April, 2000.

Not any more! All that's required is the determination to
make the necessary memorizations, and to stay with the
program until it's done. At which time no one will be able
to determine, without some sort of additional testing,
whether the newly licensed Extra has learned anything at
all! Now, the only differentiation among the amateur license
classes is merely "Did you memorize 35, 70 or 120 question
and answer pairs?" Neat!

> However, they are entry
> levels to their enhanced privileges. In no sense are they graduation
> certificates, or proof that someone has achieved something great in
> technology development.

You don't say. I guess that's why all the newcomers come to
the old Extra with all their questions and problems- or once
did. Evidently they hadn't learned that he was just a
beginner, too. What drivel.

> Amateur radio never was meant to be a college
> degree.

For most radio technical people over the term of its
history, a college degree just wasn't in the scheme. Nor did
it need to be. Yeah, we know those of you who came along
later would like to change that. And as far as ham radio is
concerned, you got it done.

> The only applicability of an amateur radio license to the
> commercial world that I know of is that an Extra will get you a *Third*
> class NARTE Technician certificate.
>

Well, Hoop de do! That just shows how much disdain you
"engineers" have for any non-engineer. We just don't count.
Fine, I sure don't need your "Narte" nasty and wouldn't have
it. I had a First Phone that the FCC junked, the same way
they just did to the Extra class ham license. Whatever

little technical prestige Extra had remaining, and after 15 years of Question Pools there sure wasn't much, is now gone to the same junkpile. RIP. It was once upon a time a Very Good Thing. Now it's nothing.

Agreed. Several years ago some friends and I worked the June ARRL VHF contest using a friend's callsign, KD6BIS. I made a few contacts on 6 meter CW with his call, and found it maddening, both to send and for others to copy. The D is one dit away from being a B; the B is one dit away from being a 6; the I is one dit away from being a S, etc.

--Leigh Marrin/KM6JE. (Several times calling CQ on CW, I've had replying stations miss the final dit/E, FWIW.)

I think it has. The group I used to hang out on 10m with no longer meets there. Now an attempt at having a QSO on 10m is a string of constant "Breakers," all of whom seem to think you are required to add new members to your conversation, like some big CH 19 partyline! In the beginning we did allow newbies to break in, but invariably they had nothing to add to the conversation, and nothing really to say at all. After they give their "first personal," its always something like,"I just wanted to tell tell that you're loud here in East MudPuddle. How are you hearing me?"

Frankly, I'd rather discuss a medical condition!

I would like to wrap this debate up too, but I can't allow this
misstatement of what I said to go unchallenged. What I objected to was
your characterization of ARRL's motive as being to eliminate
competition. I never said that ARRL intended to continue to publish
CommQuart -- that would be a silly thing to say.

Regarding the "declared it dead" remark: I withdraw it.

>I've also raised the issue of Doug Smith's exposure to conflict-of-interest

Federal trumps state laws with respects to telecommunications.

Besides every state has exempted hams, journalists, and those
who sell and repair police radios. It is usually under the section
of state law that deals with interferrence with a police officer.

And remember, all local communities are charted by their state
governments. Most police officers enforce state laws. Local
ordinances are a small portion of the law. State laws set the
authority of what any city government may do.

>scanners.

NY might want to consider hams in violation, but the FCC
preemption for ham transcievers is absolute (i.e. there is
no caveat that there can be no police frequency
programmed in). Indeed, just how does a police
officer know what any of the "programmed"
frequencies are if someone was stopped with
their transciever in the car? Given the high
probability that some hams with transcievers have
been stopped for traffic violations in NY state without
the police hassling them, I'd say that there is no
problem in NY state....or we'd have heard about it
here before.

Cheers,
Bill K2UNK

Much fewer, as compared to the USA, but still enough to illustrate
that all the gun-banning in the world still doesn't keep weapons out
of the hands of those who choose to obtain them - and I suppose it's
not much consolation to the victim of a rape/robbery/burglary/mugging
that their assailant was unarmed - it's sorta' like a mortally injured
traffic accident victim happily murmering "at least I wasn't killed
by a nasty GUN" as he draws his last breath...

By the way, for the record, I am having LOTS of difficulty in
obtaining more recent statistics related to international crime -
especially violent crime. Seems most of the outfits now providing
in-depth info want $$$ for their stuff - hardly worth it, since all
the statistics in the world supporting benefits of private onership of
guns haven't YET changed the mind of a SINGLE anti-gunner *I* have
ever encountered - all classic cases of "don't confuse me with FACTS,
my minds already made up..."

Some people are astonishingly inattentive with even their own
property. You don't know that he wouldnt've done this with his own
car.

Relative of mine got a Lhasa Apso dog; paid serious money--on credit,
of course--for his budget ($500). After being only half-cared-for for
over three years, The dog was surrendered to a shelter.

By that logic, I hope you used a hammer on all the Xmas gifts you got
(if you celebrate that.) Do you have anything in your house that was
given to you by a parent or close relative, perhaps handed down? Then
you didn't "earn" it, strictly speaking. Did you have an Elmer that
gave you one of his radios? If so, I'll bet you guarded it with your
life!

This belief has been perpetuated for so long that I cannot believe it
anymore. The FCC certainly doesn't.

Take care,

Dave

P.S. Since many here are gun owners, I pose an amusing thought
experiment: What if the attitudes expressed by the PCTA's ("earning
something") were applied to gun ownership by the BATF and the NRA?

Not in your lifetime. But that has not been the case at all
in mine.

Does ANY job come without further training? None that I
know of.

> If they had to train you, then you cannot now claim that passing the
> ham license exam was evidence of electrical skill since those
> organizations did not take that license as proof of electrical skill.
> For those organizations, that license was only proof that you had some
> basic understanding of basic electronics and therefore would be easier
> to train than another person.

Well, well! And today, that can't be assumed, without
further testing. Once a ham radio license conveyed some
minimum level of knowledge and skill, in most cases. Today,
no employer who knows what has happened over the past couple
decades would consider awarding that 'credit' without other
independent confirmation.

> And the ham license of today still serves that purpose.

I'm afraid not. Today's ham license proves only that
licensee was only at least minimally interested in radio,
enough that he completed the licensing process. The FLAWED
licensing process.

However, it
> plays less of a role in the hiring process today simply because radio
> plays less of a role in an electronics career today.

There are fewer two-way radios in use today? What rock you
been hiding under? And there aren't a mass of wireless
services that have sprung up overnight? These are not
"radio"?

Years ago, because
> of the greater role radio played in an electronics career, many more
> organizations were willing to give credit for any radio training (no
> matter how basic). Since radio plays less of a role today, fewer
> organizations give that credit (even those who did years ago).

Your conclusion is true but you erred in your reasoning.
Radio is more widespread than ever, in every area of life.
Even the dreaded HF telephone wireless modems are radio.

> I also think you're being a little disingenuous here, Dick. After
> working at a radio/tv repair shop, graduating near the top of your
> electronics school class, and working in electronics in the military, I
> really doubt that the ham license really played that much of a role in
> your later employment at that "good technical job."

You'd be wrong. And to top it off, they even gave me a
Morse code exam!
The organization had discontinued the use of Morse not long
before, but still retained it as a backup to wireline
teletype. ALL the officials who were involved in the hiring
process were longtime hams themselves, and knew all about
what a ham ticket meant *then*.

> The simple fact, whether you want to admit it or not, is that the ham
> license exam has always been an extrance exam into the world of hobby
> radio (hobby radio, not professional or commercial radio). That is the
> way the FCC designed it many years ago, and that is also why there have
> always been other, much more difficult, license exams for professional
> or commercial radio personnel.

That is neither a simple nor a complicated fact, in fact it
is no fact at all. Just as Novice was the preferred entry
point into ham radio, a ham license was once the preferred
entry point into commercial radio and electronics. The
commercial exams came later (been there too). THAT is what
has changed.

> With that in mind, the existing license exam system serves its > purpose well.

Sure does. It sets the ARS up for making our frequencies
available for reallocation to commercials, since such a
trivialized "service", now easily equated with other trivial
services such as the Citizens Band service, is much less
valuable in its own right. Only ours has VAST SPECTRUM
available for the taking. FCC has just completed the setup
by doing exactly the oppositee of what they said - they have
made the Amateur Radio Service a **NON-technical** entity,
and you have just helped to confirm it all.

I'd imagine the Question Pool Committee will further
confirm it after April 15.

You didn't address what the original poster wrote -- he's calling
for phone operation in the digital subbands.

Regarding military comms, our radio budget will never begin to
approach theirs, so why compare amateur radio to the military?
Very different missions.

Jeff

>your characterization of ARRL's motive as being to eliminate
>competition.

I don't want to appear unkind, Jon, but the BOD knew the added revenue and circulation numbers needed to save QEX weren't going to come out of a monkey's butt. They knew those dollars and numbers could ONLY come from hams who would no longer have the option of subscribing to the Quarterly. They knew they were eliminating the "other place" where technically oriented hams could go for new information. You may not like the characterization (I don't either), but they knew they were eliminating QEX's competition. They also knew they were creating a publication monopoly. Don't insult my intellegence by telling me the BOD are "good guys" who wouldn't do anything like that, because the fact is, Jon, they just did.

>Regarding the "declared it dead" remark: I withdraw it.<

Thank you--I appreciate that.

>Again with the misquoting? I do NOT agree that a conflict of interest
>exists.

You exact quote was, "Can you provide examples of how his conflicting interests have affected the content of QEX?" That statement appears to acknowledge the existence of conflicts, but challenges me to list specific examples illustrating how those conflicts might have affected the content of QEX. Perhaps I misunderstood your meaning, but the question is largely irrelevant anyway. As I said before, the "existence" or "non-existence" of actual abuses has little to do with the issue. The mere fact that he concurrently holds both positions is sufficient to expose the League, Kachina, and himself to needless liability for those sorts of claims. In my opinion, League members ought to be concerned about that.

By the way, I still don't know what Doug's relationship is to QEX and the League. Does anybody have that information available to share with me and other League members?

Thanks and 73,

Rick K1BQT

Although I'm happy for the person who passed his 13WPM I would like
to ask you WHY you think that he is going to be a head above the
many hams that will follow later this year, when the FCC won't even
require a cw test. I mean someone who may be able to copy and send
CW at 30 or 40WPM right now won't have that requirement if they happen
to take their license say next year. So just because he didn't get
the chance to prove himself on a test means that this person who just
passed his 13WPM is a head above him?????

Hello, moron! Get it through your head, come the 15th of April it
won't matter any more. It just doesn't matter. You certainly aren't
going to look down upon someone who can't even prove their proficent
in cw are you????? You can't go blaming those people in the future
who don't even know what ham radio is yet for something the FCC did
so stop making CW an issue with the magnitude of amateur operator we
are. Judge us by how we operate not by if we can copy cw at 20wpm.

randas@mindspring.com hath said:
: Congrats on passing the code test Don. I know your hard work and

No, but if you've made the effort to learn and understand the theory (and not
to memorise the questions) it's something you can be proud of perhaps.
In VK when you get your license you get both the station license
and a certificate of proficiency. The unrestricted license is the
"Amateur Operator's Certificate of Proficiency" for example. This is
actually quite a nice certificate, with the seal of the ACA etc.

Mike <michaelj@networktel.net> hath said:
: Does anyone have any information on Amateur testing being available in the
: Pensacola, Florida area?
: Thanks

A simple search using the keywords pensacola arc would get you
a link to the Pensacola ARC, on their site they list their test
schdules.. Here is the link to the page, bookmark it:
http://qso.arc.uwf.org/~ffara

Exam info page: http://qso.arc.uwf.org/~ffara/exam.htm

Next test is Feb 24th thats 20 days after their hamfest. And
no, they are not holding a VE testing session at the hamfest
I already emailed them and asked, they said no because of the
already scheduled 24th session. IMHO though I wish they had
ve testing at the hamfest because I would of taken a test oh
well I'll just spend that time seaching for bargins.

Hi, People!

I'd like to very respectfully and with no malice aforethought <bwg> request that there be some "tailoring" of cross-postings.

I'm over on "rec.radio.shortwave" and there is all sorts of "ham" stuff being cross-posted to it that have nothing to do with SWLing but only with hams.

I think y'all are great and I owe my interest in SWLing to hams but if I wanted to be "in" on ham stuff, I'd subscribe to ham newsgroups.

When I got on the Internet in 1989, this wasn't a big deal as the ng's were so small but - in 2000 - this x-posting really bogs everything down.

As I said: no flame, just a respectful request.

Many thanks,

Gray

Maybe you but not me... When I'm asked about it I'm going to tell
the truth, I've been licensed for 12+ years, I got into the hobby
mainly to be active on 2 meter, never really had an interest to
study for higher code, and at the time barely made it beyond 5wpm.

I've always enjoyed ragging on 10meter phone and often wished I could
go down below but wasn't encouraged enough to go for higher, but now
with the change in requirements I'm going for it. Yes code is what
held be back all of this time.

Thats how I would handle it.. I don't have to feel ashamed that I got
an extra class license without being able to pass 20wpm code. If some
people have to feel that way, fine. I'm honest about it though, and
I don't have to be "proud" that I took 20wpm. Its just a thing to me,
nothing but a thing.

So when someone asks what i was before the dumbing-down as you call it
I'll say I was a tech+. If they react badly to it fine, I'll find
someone else to QSO with, if they throw it in my face and try to get me
mad I'll stop the QSO and change the frequency, if they treat me with
the same respect i treat them with then we're gonna have a FB QSO and
I would of made a new on-air friend who isn't close-minded. :)

Dick,

I think you're downplaying your own abilities and attaching too
much importance to the license. Sure, the license, especially in
the past, was a 'flag' indicator of certain abilities, but that hasn't
been true for years. I think the status of a HAM license as a
flag of technical competance went out the window in the 60's,
when consumer technology moved away from 'hand wired chassis'
and tube technology. Not that HAMs changed any at that time,
but the public perception of 'high tech'. And over the years it's
further changed.

Mike

>Comprende now? ;)

So you're stereotyping.
The call could stand for "Wife Trapped In Texas," or a plethera of phonetics. There are other things that come to mind beside the mammary glands. Kim's callsign made me laugh. I didn't judge her or her callsign on the basis of the suffix. The FCC's callsign computer randomly picked it, so it's no big deal.

: > > W5TIT
:
: > I do not question the rules and regs. I simply do not
: >think "Amateur" radio operators help Police agencies
: >because of their "civic duties". I believe it's for the attention.
:
: Since we receive little recognition from our community
: service, evidenced by the fact that most of my
: neighbors/co-workers/friends--indeed myself (before I
: became a ham) are completely unaware that ham radio is "out
: there" during an emergency, the correlation between public
: service and "attention" for said service cannot be made.

Most public service is done by hams for personal satisfaction,
for a sense of giving. We do not receive money or thanks.

: > I however do not have "Blind Faith" in police agencies
: >either.
:
: Oh, believe me, neither do I. But, I don't look at my
: service as much for them as I do for the people in my
: community. I simply use an available mechanism to help my
: neighbors/co-workers/friends. My disdain for the police
: community, in general, is well known to my fellow hams in
: this area.

What people like him do not think about is all the public
service being given by volunteers in all areas of our
communities. Red Cross, Boy Scouts, dealing the old,
the mentally ill and the homeless are just a few.

: > It seems to me (at times) that hams go out of their way
: >to help the people who will screw them the most later. I

: >suppose I do not like doing much for my Govt. as they
: >do very little for me.
:
: It seems, then, that your anger is misdirected toward the
: amateur radio community. As I said above, I do not look at
: my public service as helping the police and "govt."
: agencies as much as I feel I am helping my community.

He sounds like Scrooge. He pays his taxes so it government's
job to care, not his.

: >
: > I do not see the above as grounds for foxhunting illegal
: >transmissions for the police, on police bands.
: >
:
: While an extreme scenario, you may feel differently about
: that jammer disabling police frequencies if the ability of
: the police to save someone's life (maybe your own or
: someone you love's) was impeded by some jerk thinking
: he/she is being funny.

Wait until someone he knews dies because a jammer
blocked help from getting there.

: > And if you started supplying "voluntary noncommercial
: >communication service" to the public on a regular basis,
: >(non-emergency) you would have to pay from someone.
: >
:
: Well, I wouldn't have to pay someone :->. We, by our Rules
: and Regulations, are not allowed to perform that service on
: a regular basis...and it is inferred by those same rules
: that governing agencies are not allowed to request our
: assistance on a regular basis.
:
: I have learned, as a new Newsgroup person, that too much
: time is spent in here degrading and arguing. I don't want
: our exchange to become that. It is obvious to me that you
: are very angry and resentful and, while I understand where
: you are coming from, it is far beyond me to solve whatever
: history it is that has brought you to your current way of
: thinking. I would ask only that you please remember most
: of us commit to public service purely for the benefit of
: our community more than for the benefit of any one agency.
: We also know that our service goes largely unrecognized.
:
: 73, Kim W5TIT

BTW, Mary K., happy 45th this coming Tuesday.

: You didn't address what the original poster wrote -- he's calling
: for phone operation in the digital subbands.

Sorry. I do agree that non voice and graphic data (character based)
transmissions need their own bandspace.

: Regarding military comms, our radio budget will never begin to
: approach theirs, so why compare amateur radio to the military?
: Very different missions.

Because too many Hams have this romantic notion of the lone
operator, who is the only one with the skills, who saves the day.

Modern communications have made it easier for the common
man to do what used to take a very skilled individual.

|>
|>

No. The FCC issued a directive (not sure of the correct legal term)
that says local authorities cannot enforce laws restricting the possession
by hams of ham transceivers that can receive police frequencies.
Check with the FCC for correct wording of the FCC statement.

i.e. the FCC not only doesn't make it illegal, they forbid the locals
from making it illegal.

However, you may have to spend lots of time and money in court to get
it back. Remember, the cop who wants to take your equipment has a gun.
He also probably won't suffer any serious consequences if he takes your
radio and they have to give it back later.

2123. New Internet PacketCluster Site more.....

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-14 00:00:00 UTC
From: nfivein@my-deja.com
Message-ID: <85nnsq$77a$1@nnrp1.deja.com>
Source record: 121681

As a result of my earlier post inviting you to connect to the New Internet PacketCluster at KC0DJO in Duluth I have received several direct e-mails asking what software was required, how to 'do' telnet etc. So here is an explanation:

First you must be connected to your ISP!

If you are running Windows 95 or 98 you already have the needed telnet software. Simply open a DOS window as follows:

Click on Start
Click on Programs
Click on MS-DOS Prompt

In response to the prompt type telnet. It will look like:

C:\WINDOWS>telnet

This will generate a telnet window.

First click on Terminal then Preferences and put a 'check-mark' in the box for 'Local Echo' then click on OK. This is needed so that you can see what you type as AR-Cluster does not echo your commands.

Now click on Connect then click on Remote System...
This will open a box where you will put the address 209.32.226.63 in the space following Host Name. The Port should be shown as telnet and the terminal type will be fine as vt100. Now click on Connect.

Now the original information reproduced below should guide you.

Original posting:

You are welcome to connect to a New Internet Accessible PacketCluster at telnet address: 209.32.226.63

This AR-Cluster is located at KC0DJO in Duluth Minnesota and is part of the Midwest PacketCluster System.

At your initial sign on you will be asked for your call, name and QTH. Enter your QTH as 'City State' or 'City Country', e.g. Chicago IL or Oslo Norway so we can see where all our new friends live.

Enter HELP SET for information on setting or resetting your Location (Lat/Long), QTH and NAME.

You can send a cluster mail to the sysop with the command 'S KC0DJO'

73 and Welcome

I think most would agree that Usenet is *not* a place for families.
Vulgarity, profanity, threats, and name calling have been the norm here
for some time. Many ISPs require a special warning/authorization
screen just to get here.

On the other hand, Ham Radio has been touted as a family hobby for decades.
And for most of those decades, with a few exceptions, it has been true.
But I think many hams will agree with me that in recent years, things
have been changing for the worse. Call me a prude if you want, but I
think it's an unfortunate change...

Let's hope that future ham licensing applications won't require a warning
and parents authorization disclosure statement...

It's not the worst there is, but a guy could go to sleep sending my
old novice call: WN3ZOQ. I figured it's right around 75 bits long.

My Extra call is 40 bits long. So for the upgrade I nearly cut my
call length in half. Back when I changed to my Extra call sign, it
was really cool 'cuz I didn't have to worry about how much memory I'd
use up in a memory keyer...

Of course "AB3A" isn't exactly a pile up buster, either.

The question that I ask here is, after April 15, what option will new hams who take the tests have other than a 5 wpm code test? The answer is, "none," so on what basis could one find fault with an applicant who takes the only test that the VEs will give? What choice will they have? If someone wants to be unhappy with the FCC for their decision, this is America, but don't take it out on people who will do just what the law requires.

I did, with this result:

Radio Operator/Communications Analyst in Quantico, Virginia
USA

Key Role
Provide Morse code and radio operator support for key
government clients.

Qualifications
HS diploma
3-5 years of experience
Experience with voice, FSK, and packet communications
Experience with Morse code at a proficiency of 18-20
groups per minute or Extra Class FCC ARL
Experience with radio theory, Q signs, and radio
equipment

E-mail your resume directly to Mike.

I'd bet they have trouble finding a young ham to take this
job.

Well, I'll tell ya what...

Why don't you try interviewing at HP and tell them that your qualifications
include being able to design a Hartley oscillator from memory and that you
can send and receive 20WPM code proficiently. See how far you go...

I don't know if he is a ham but i can tell what he is

33rd degree mason
member of Council of Foreign Relations (CFR)
Bilderburgers
member of "skull and bones" (another secret society)
Trilateral commission
Atlantic Alliance

I've done my homework on the "fabian socialists"

In the meantime, Lloyd Davies, who never lets facts stand in the way of an idiotic pronouncement, completely misled the questioner with this incorrect guess:
> ITs something to do with some 10 meter "contest group" There boring
> qso's consist of "my 10-10 # is" What a joke!

> --
> LLoyd Davies, N0VFP /4 NCT
> Barf

> The FCC didn't assign me
> Very Fine Person for no reason!

Copied from AF2Y. This Davies character has also never had an original thought.

> http: (increasingly long inane list of useless URLs snipped)

10-10 International is an organization formed to promote 10 meter activity, particularly during the nadir if the sunspot cycle. They sponsor several activities, including chapter nets, certificates, operating awards, and QSO parties. Were it not for the promotion of 10-10, it is very possible that much of the band might have been re-allocated for lack of activity.

They have a website at: http://www.ten-ten.org

To get a 10-10 number you have to collect 10 numbers from other 10-10 members in on-the-air contacts (oops, lets Davies out), then submit them to 10-10 International. Addresses, etc., are on the webpage.

It may or may not be your cup of tea, but I've had some fun with them over the years.

Is that true? How will you make good on this? You need to impress upon other people as well that it is not good to harbor hate, grudeges, bad feelings against those you do not agree with. I myself will take the step as well. I will no longer as of today make any more comments regarding jews, blacks, etc. I hope everyone can get along and maybe try to help each other. These are good words, Dan. I hope you can agree with me. Is this ok with you KK7HO?

Nope, that doesn't get it. If you agree with the sick garbage that guy spewed then it's just the same as you saying it. Hell, that's how you usually say it anyway, by copying someone else's pathetic work.

> I myself will take the step as well. I will no longer as of today

--> I'm not trying to excuse anything those people did. But when we have school administrations that look the other way when the star football player beats up someone who's "different," it's not hard to see that pretty soon there's going to be some really resentful, angry people at that school. As someone who was a bit different from the norm in high school, I can tell you that schoolkids get away with things that would be considered assault and battery in the "real world," and teachers simply look the other way. High school and junior high were the most hellish seven years of my life, and I can *easily* see how someone could be driven to committing murder by the experience.

Banning guns won't fix it. Requiring schools to post the 10 Commandments in the hallway won't fix it. It's the way we run our schools that hast to change. Right now they're basically like prisons, where the strong prey more or less freely on the weak.

Lloyd,

Of course it is true. As to how "I" will make good on this. I already have.

1. I have negotiated a peace with Bob Youngblood, KT4TR.
2. I have been in contact with Frank Todd for many months and we have buried the hatchet.
3. I have accepted an apology from George Ashley, W4FQF and given him the same.
4. Marty Chittum and I have also buried our little war (W9XN).
5. Jim Obrien (W4AMP) and I have also negotiated a peace between us.
ETC.ETC.

There is no need to continue this Lloyd, you can verify this with anyone you see that I have mentioned. You see Lloyd I AM SINCERE ABOUT ENDING THIS STUPID CHILDISH WAR.

I congratulate you on "seeing the light". Now lets see if you can do it. (Keep the peace). That is the hard part. Don't let the comments of others goad you into falling back in the same ole attack mode. Think before you speak or post. Think of the betterment of amateur radio, and just STOP. It is HARD not to attack those that have done me wrong. It is HARD to put it all aside. But to me the choice is simple. I love amateur radio, it has been good to me. I CHOOSE not to be a part of the problem any longer.

Dan/W4NTI

Ham Radio University - HRU2000
Babylon Town Hall Annex
Phelps Lane & Miller Ave
North Babylon, NY
Sunday January 23, 2000
9:00 AM - 2:00 PM

This is a special day of education for amateur radio. Many ham radio Clubs and organizations from the New York City-Long Island Section will have information booths. This is your opportunity to meet the local clubs and organizations and learn their activities, meetings and membership. There will be a free tune-up clinic, DXCC & WAS card checking, eye-ball qso room, a full VE session along fifteen technical forums with guest speakers from the NLI section.

Donation: $2.00. Spouses and children under 12 will be admitted free.

For more information via Internet: http://arrlhudson.org/nli/hru2000.htm

Contact: Phil Lewis N2MUN (631) 226-0698

FORUM SCHEDULE
10:00 - 10:45 AM
Session 1A -Amateur License Restructuring - George Tranos N2GA
1B -Packet- John Papson WB2CIK & Bob Anderson K2BJG
1C -RFI & SWR - Sid Wolin K2LJH
10:50 - 11:35 AM
Session 2A -DX - Marty Miller NN2C
2B -APRS - John Blowsky KB2SCS
2C -YL Forum - Diane Ortiz K2DO
11:40 AM - 12:25 PM
Session 3A -Introduction to Contesting - Mel Granick KS2G
3B -Amateur Radio Satellites - Ken Ernades N2WWD & Bill Scheibel N2NFI
3C -QRP - Norman Wesler K2YEW
12:30 - 1:15 PM
Session 4A - Antenna(s) - Mike Kozma WY2U
4B - A.R.E.S. - Tom Carrubba KA2D
4C - Kit Building - Neil Heft KC2KY
1:20 - 2:05 PM
Session 5A - Tower Regulations - Mike Anderson N2TX
5B - QCWA - Herman Milatz W2TLC
5C - Purchasing Amateur Equipment - Phil Lewis N2MUN

THE W8MMQ WIRE

Welcome to the all new W8MMQ Wire! This newsletter is distributed weekly by W8MMQ, and is available free to all radio amateurs.

Subscribe to the newsletter! Just email w8mmq@email.com, and ask to be put on our mailing list. Be sure to include your name and email address. If you are receiving this newsletter now, you are not on the mailing list. This is simply an introductory issue. You must email us and let us know that you would like to subscribe, or you will not receive future issues of the newsletter.

AMATEUR RADIO RESTRUCTURING IS COMING
By now, most hams around the country have heard about the changes coming to amateur radio on April 15. The FCC has unveiled its controversial new changes to the service, which include the elimination of the 13 and 20-WPM Morse code requirements for access to the HF bands. Also, after April 15, the FCC will no longer issue Novice, Technician Plus, or Advanced class licenses.

The announcement of the changes, which came on December 30, 1999, has sparked debate throughout the amateur radio community, both on and off the air. The ARRL Board of Directors will be meeting January 21 and 22 to discuss the changes, and look into what implications may result.

Be sure to visit http://www.arrl.org/ for complete information on the restructuring issue, and for any news which may develop.

-- W8MMQ

AMATEUR RADIO ENFORCEMENT IN THE NEW YEAR
As the new year gets under way, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth hinted he might have to break bad on hard-core offenders this year. He explained that poor or lax FCC enforcement in the past led him to be more forgiving of rulebreakers during his first full calendar year in the enforcement chair. Now, those who persist in operating outside of the stated basis and purpose of Amateur Radio "are beginning to try our patience," he said. "I can't say we're going to be as compassionate this year."

Hollingsworth said he expected to continue his focus on incursions into the 10-meter band by unlicensed operators, especially as propagation gets better, and on equipment certification issues. "We're very concerned about the illegal equipment we see for sale at hamfests," he explained.

Overall, however, malicious interference remains "the basic problem," as he put it. "We're going to use the High-Frequency Direction Finding Center at Laurel [Maryland] more this year" to track down rulebreakers, he said. In addition, Hollingsworth now has enhanced monitoring tools at his Gettysburg office, allowing him access to the HFDF Center's 14 antenna fields plus VHF-UHF "pods" that can be moved around as necessary. "We have dial-in capabilities to all of our antenna fields and to the pods, so we can cover HF, UHF, and VHF anywhere in the country, right here from the Gettysburg office," he explained.

"It's a force multiplier, so to speak," Hollingsworth said of the new capabilities.

Hollingsworth also says he's upbeat about the future of ham radio and the FCC's Amateur Radio restructuring plan announced December 30. "I'm really optimistic about it," he said this week. "I think that it's a good idea to simplify things a little bit as far as the number of license classes," he added, referring to the new three-tiered system.

Hollingsworth said he believes Amateur Radio needs more young blood to keep it going in the future, and he thinks the new licensing system that becomes effective April 15 might help in that regard. He declined, however, to comment further on the specific policies and rules the FCC's Wireless Telecommunications Bureau laid down in its Report and Order, saying it would not be appropriate.

-- The ARRL Letter, January 7, 2000

Editor's Note: Hollingsworth, an amateur radio operator for 39 years, will be speaking at the Dayton Hamvention, on Saturday, May 20.

AMATEUR RADIO CLASSES IN MID-MICHIGAN
The Central Michigan Amateur Radio Club, and the Michigan State University Amateur Radio Club, are sponsoring new amateur radio classes, which will be held from January 29 through March 4.

The classes, which will be held in the Michigan State University Engineering Building, will cover basic electronic theory, FCC regulations, and operating practices. There will also be a 5-WPM Morse code class available.

There is no cost for the classes, but a book must be purchased. The book being used for the class is Now You're Talking, which costs around $20.00.

For more information, contact Don Rickerd, W8BQD, at 517-339-8496. You can visit http://msuarc.egr.msu.edu/class/ for additional information.

-- W8MMQ

LONG-DISTANCE MORSE CODE RESCUE
Gene Nailon, K5DLE, reports a ham in the Rockies has a fellow amateur in Oklahoma and the Morse code to thank for helping after he fell ill during a QSO December 17.

Larry Watson, W5EIU, in Oklahoma City answered a CQ on 3710 kHz from the Wyoming ham. They had been talking for about 15 minutes when the Wyoming op

told Watson: "I think I'm having a heart attack, and I can't get to the phone." After that, his transmission broke off, and Watson was unable to raise him further.

About the same time, Jim Caldwell, WJ0C, of Waterloo, Iowa, broke in. WJ0C was able to look up the full name and location of the Wyoming ham and relay the information to Watson, who called the police in the Wyoming town to alert them to a potential medical emergency. It turned out they were right.

The Wyoming ham -- whose name and location were unavailable -- was hospitalized, and the prognosis was said to be good. Watson, first licensed at age 13 in 1954, says this was a first for him. (By the way, both Watson and Nailon belong to Central Oklahoma Chapter 63 QCWA).

-- The ARRL Letter, January 7, 2000

THE W8MMQ WIRE IS BACK
After a several month break, the W8MMQ Wire is back. The Wire, which ran under various names through 1998 and 1999, is a weekly amateur radio news and information newsletter, available free to all radio amateurs.

The newsletter is now expanded, offering more news, and an expanded Contests and Events section.

If you would like to subscribe to the W8MMQ Wire, send your name, email address, and callsign, if any, to w8mmq@email.com. Your email will be read and answered as soon as possible.

THE WEEKLY DX REPORT
Look out for 8Q7WP and 8Q7ET from Kuramanthi Island in the Maldives until the 18th of January. They are operating two stations on bands between 80 and 10 metres, using CW, SSB and RTTY. QSL is via PA5ET. This counts as AS-013 towards the RSGB Islands on the Air awards programme.

A group of operators from the University of Yonsei in Seoul [pronounced 'sole'] will be signing HL0Y/2 from Kangwha Island until the18th of January, on bands between 80 and 10 metres. QSL via HL0Y or via the bureau. This counts as AS-105 for IOTA.

YL operator Sarah will be active as KC4AAD from Siple Dome Station, Antarctica, for the next few weeks. QSL is via K4MZU.

Special Event station 3Z8IMA [India Mike Alfa] is active on bands between 160 and 10 metres using CW, SSB, RTTY and AMTOR from Lublin, Poland, until the 31st of January.

W4ZYV will be active as T32DA from East Kiribati until the 25th of January.

-- RSGB News and 425 DX News

UPCOMING CONTESTS AND EVENTS
Visit the ARRL Contest Calendar at http://www.arrl.org/contests/ for complete contest information.

The North American QSO Party, phone portion, sponsored by the National Contest Journal, will run from 1800-Z January 15 through 0600-Z January 16. Work stations only once per band.

The 2000 CW QRP Contest, sponsored by the Michigan QRP Club will run from 1200-Z January 15 to 2359-Z January16. Operate CW only, on 160, 80, 40, 20, 15, 10, and 6 meters only. Work stations once per band for QSO points and Multipliers. Visit http://www.tir.com/~k8dd/miqrp.htm for more contest information.

If you know of an upcoming amateur radio contest or event, send it to w8mmq@email.com, and we will include it in this section. Be sure to send it at least a week in advance. Thanks!

AND ... IN CLOSING
Thanks for reading this edition of the W8MMQ Wire! This newsletter is produced and distributed each week by Dan, W8MMQ, and is available free to all radio amateurs.

Information from the following sources was used in the production of this newsletter: the ARRL Letter, RSGB News, eHam.Net, and other published reports.

An online edition of the newsletter is available at http://w8mmq.net/. All content on the W8MMQ.COM and W8MMQ.NET web sites is Copyright (C) 1999, 2000 by Daniel Hicks, Jr.

Message-ID: <85o92c$70j$1@nntp4.atl.mindspring.net>
Source record: 121715

Hello Dan, Rich, Rube and all the rest of the GREAT GUYS. Yes, the "Docster" is back on rec.radio with a different server and I want everyone to know that it is a complete lie that K2IVX and KY4TR are "serving " you about tbeir getting me tossed off AOL. Balderdash!! They have as much shareholder pull as a zit. I have nothing against AOL per se. The tech help is fine and they are number one for a good reason-they earned it. I was having problems connecting and staying on and so forth and so on therefore please don't write to me asking if you should get off AOL. No server or ISP is perfect and keep in mind that AOL is really an Internet within an Internet and offers a lot of jazz and hash and mash and a lot of people dig it. So I say unless you have a very good reason to leave, stay on it. I am not a paid employee of MINDSPRING but do enjoy their services. I have just one number on which to connect-it does it the first time even at peak hours-I never get a warning box and never got bumped off line. Furthermore, I sweat it's true; I have access to over TWENTY THOUSAND NEWSGROUPS thru MindSpring and over ONE THOUSAND through Microsoft. You should feel privileged I choose this rec.radio thing over the other 20K. Well getting back to matters on the farm, I will now make it short because in a few minutes I am going out for dinner with my wife and a couple named Harris. I sincerely want to thank all of you who have written to ask about me and to encourage me to post again. To those who haven't, geh cockin' afinyam, you're worthless. By the way I do also post under the name "goodbyeherbiesaysdoc" which is most fitting even though the Herbster has mellowed quite a bit and I might write to the FCC on his behalf. That means they should just cut the left one off if indeed he still has it. And so for now, I shall bid all of you nice guys a fond adieu but I must flip the bird in the direction of Port Washington and Vero Beach(not at you Bobby Leger). In time both the Shill and the Pill will be VERY embarrassed about besmirching my reputation with wonderful AOL. Your time is coming, peckerheads. Just wait.
Great 73,
Doc,AF2Y

>

The initial idea of 10-10 was dreamed up some years back to promote use of 10 meters during low sunspot cycles. Not a bad idea, but it has gotten out of hand and gone way beyone 10-10 numbers. They now have these crazy numbers for everything you can think of and if you want to have a qso with a number hunter, forget it. The extent of their contacts are "here is my (high-roller, steal town, social security, drivers license, or whatever) number, good for xxx points." They are only interested in collecting as many of these meaningless numbers as they can to write down in a log book. Someday they can show their grand children, "look at this, I got four 100 page books all filled with these numbers, isn't that great!!"

I don't think the question pools are available for purchase.
On the other hand, our volunteer examiners probably have a bit of a
collection from all the exams they've run in the past.

I haven't heard of corruption in the VE process here, and we don't
have the medical exemption for Morse either.

Tired of downloading shareware ham software for the Mac? Black Cat Systems has placed its entire collection of Mac software, as well as software from Dog Park Software and Nedbalek Enterprises on a CD-ROM.

Each CD is burned to order, so it always contains the latest available version of each program.

If you'd like to take a look and see which programs are contained on the CD, please visit this page:

http://www.blackcatsystems.com/software/cdrom.html

The CD is just $12, which includes air mail shipping world wide.

If you know of any other Mac ham related shareware/freeware programs that should be included, or have written one yourself, please contact me, and I'll be glad to add your program to the CD.

Ten-Ten International is an amateur radio club that does little more than swap ten ten numbers between members... and ultimately they have succeeded in making the 'novice voice' subband a members only club... Many 10-10 members won't give you the time of day if you do not have a membership number... whenever I operate 10, I do one of two things: make up a number (usually 4 digits ought to do it), or stay out of the Novice section if you can (although they often creep up in the General portions, too!).
They pretend to represent ALL of the ten meter band, but I have NEVER heard a 10-10 member on 10 meter CW bands, and as I recall, the organization never really came around until the mid eighties 'Novice Enhancement' gave ten a 'boost'. n4trc@prodigy.net

Was about the same when I was in those grades around 30 years ago and
was the same way 30 years before that. But, only recently has things
like Columbine begun happening. Guns and explosives where even far, far
easier to get.
But, thanks to the social experiments that they push on our school kids,
and the entertainment industry churning out movies and shows that
glorify such behavior how do you expect kids to behave?
Good God, the president of the United States can lie under oath and get
away with it. How do you teach your kids that "telling the truth" and
taking personal responsibility for your actions is the right thing to
do.
Recently there was a tragic car crash that killed two teenagers and
seriously injured a mother and daughter in another car. The 18 year old
driver was DRAG RACING in a Mitsubishi 3000 GT when he lost control.
What really made me angry was after that the press and the parents of
the deceased driver wanted the driver of the other car, a 17 year old,
to be charged with manslaughter and sent to jail for a long time. Like
the whole thing was his and his alone fault. That their son was in no
way responsible in his own actions of participating in the race as a
cause of the acccident. Plus, they had no responsibility in the fact
they gave a high school senior a high performance car that was built for
one reason, speed, and expect him not not use it for that. And he, being
18, was the only LEGAL ADULT of the bunch.
And, now one of the Columbine killers parent's want to sue the sheriff
for not warning them that the other kid might be a "bad influence" on
their son!!!! No personal responsibility.
No, I personally feel that parents now days rely on the school system to
not only educate but form the values of their children and be their baby
sitter. I coached softball and basketball for pre-teen girls. I had
parents who never came to practices or games. I was a baby sitter for
them to dump their kids on.

2164. Power Connectors

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-14 00:00:00 UTC
From: Ken Mirabella <kjm@flo-bin.com>
Message-ID: <mmQf4.250$p_4.21954@typhoon-la.pbi.net>
Source record: 121722

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive"
Anderson Powerpole connectors that have become (or are becoming) the most
popular power connector for interchangeability in the emergency community
along with Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with hearing the concerns of hams across
the country in newsgroups of "where to purchase these connectors" and other
"hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low
price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure
source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "one ham helping another" is now extended from my web site
to you.

Ken, KM6YH

That's right. Major AOL sbareholders KT4TR and K2IVX wielded so much influence that the C.E.O. had to accede to their demands or else face bankruptcy. I should have known to have never crossed paths with those two supermen of perspicacity and power. I've learned my lesson and will now treat the two bums with the greatest respect.

Hi;

Repair shops / tube audio gurus / radio buffs take a look!

One lot of tube shields for the 9 pin miniature tubes (12ax7,
12au7...etc) these are the twist-lock spring-loaded type used in
radio and tube audio gear.

There are over 300 in the lot and the current bid is $15.50. I have
seen these go for over a buck a piece at hamfests and over $3.00 each
on the net.

Stock up now!

Don't miss out on this one!

Dear K0MB,

I understand your concerns about the fate of the bands, but I was a
little disturbed by your somewhat unwelcoming attitude towards
newcomers. I think it's important to let newbies get involved in
ongoing QSOs between "regulars" as a way of cementing their interest in
the hobby. Otherwise, they'll go away feeling rebuffed, lose
enthusiasm, and will be less likely to continue operating. This is
particularly important on 2m repeaters, since that's often a point of
first contact between new people and regulars. It's also important on
HF bands, since we've all been "selling" the idea of license upgrades in
order to "earn" the right to use these bands. If the reward is to be
ignored or shunned by those already on the bands, then the upgrade
doesn't seem to have much value. Let's make sure we don't turn away
converts!

That's certainly true. The only paperwork required to buy a gun when I was growing up was counting the pieces of paper with pictures of dead presidents on them. I could go down to the local hardware store, pick up a gun, ammo, and a case of dynamite without the clerk blinking an eye (and did do that more than once). Most of the pickups in the parking lot of my high school had gun racks, with guns on them. It was no big deal. But we didn't have mass (or even single) shootings at school. No one tried to blow up the school. Etc. The most that ever happened was the occasional school yard fist fight. We knew guns and explosives weren't the way to solve school problems. We had intimate acquaintance with death, and knew that wasn't an appropriate solution to a non-life threatening problem at school.

The problem with many of today's kids is that they don't have an intimate acquaintance with death. They've been shielded from it, had it sanitized, or tucked away out of their view. Many have never watched a friend or relative or even an animal die. Most think meat comes from a supermarket. They don't realize a living thing had to die in order for them to enjoy their hamburger. We knew. We often pulled the trigger or wielded the knife to put food on the table. We sat with dying relatives, we helped put them in the ground. Death was a constant companion, and it made us appreciate the value of life.

Many of today's kids live in a fantasy world where death isn't permanent. Cartoon characters spring back to life, movie heros are alive again in the next picture, relatives are wisked away to the hospital and "go to heaven", etc. That's their only acquaintance with death. We knew that wasn't the way things really happen. Though we enjoyed those violent cartoons and movies as much as anyone, we knew they were only fantasy. We knew dead things rot.

Hmmm I'm thinking more like 50.000 to 50.100 MHz, and 144.000 to 144.100 MHz. The only two I know of that are CW only. 160m includes phone from 1.8 to 2.0 MHz

You're missing the point. You don't have to shoot down the F-16s or Apache choppers or knock out the tank. A well organized resistance movement will not allow the F-16s, Apaches, or tanks to shoot at them!! Let the aircraft and tanks use up their resources with little or not return.

Cecil wrote about Vietnam and Afghanistan. He neglected to list Korea. Go to the library and get some books on the effects of airpower on the Korean War. While you're at it, read about Vietnam and Afghanistan.

Will --

If you really want to do something to save lives, why don't you start a campaign to ban the automobile? They sure as shootin' kill more people every year than guns do!!

Then you can work on the primary factors for heart disease. Why not start a campaing to ban all lifestyle elements that lead to heart disease.

How about abortions? I haven't checked the stats recently, but I'd lay a plug nickel that killing babies (oh excuse me, viable tissue masses....) by "govenment approved" abortions results in more murders than killings by guns.

Please provide a quote where I said any such thing ... I have
REPEATEDLY stated that I have no agenda to, nor would I
support, ANY move to ban the use of Morse (your "traditional"
mode, per your own comments).

What I HAVE said is that it's time to make room for and stop
erecting unnecessary barriers to the introduction of new technology.

If people decide that the new technology is better and decide
to abandon the use of "the traditional modes" that's fine with me,
but it will, as far as I am concernced, be a voluntary choice on
their part(s).

I have made mention of the fact that the FCC has mandated
spectral efficency standards in the commercial services and
they could well slap the same requirements on the ARS if we
continue to waste huge amounts of VHF/UHF spectrum with
inefficient FM repeaters, many or which lie dormant 95% or
more of the time, yet "occupy" a channel (pair) to the exclusion
of other uses. Those comments were intended to stimulate
thought about adopting new technologies before they are
forced on us by the FCC, with a possible loss of amateur
spectrum as another threat.

At very close quarters that's true. I've dispatched many a serpent with a
sharpened spade. But I much prefer to do it from a safer distance.

>There are probably more shovels in circulation than there are guns.
>Why aren't more people killed or injured with shovels?

I expect that's partially because most urbanites don't have a good
sharp spade at hand when the need arises. But I would note that
knife attacks are more often fatal than attacks committed with
firearms. When at such close quarters, attacks are often pressed
home much more vigorously than is the case when there's a bit of
breathing room between the combatants.

I've been shot 3 times, but the only time I came close to dying was
when I faced a machette. I really don't like it when the bad guy gets
that close. He's all pumped up and doesn't realize he's dead until
after he's done you some real harm.

The only potentially valid reason is that ITU Radio Regulations S25.5
requires
a demonstration of Morse proficiency (but a NO specified speed) for amateur
licenses granting privileges in the bands BELOW 30 MHz.

But Bobby....if you are such a great shareholder of AOL then explain why you don't use it as your server? And the same for MindSpring. You actually believe you had anything to do with my exchanging MindSpring for AOL? You? For cryin' out loud, you barely can get a complete coherent sentence out on a newsgroup. You know me Youngblood-I'm vindictive when hurt and you can bet your sweet patootie I'd be knocking hell out of AOL if it had mistreated me. My problems of inconsistencies stem from months ago. One of the basic problems is that I live in the crowded northeast and although I have five access numbers, it can take me twenty minutes to log on. And if I get bumped offline by one of several reasons, once again it can take me quite a while to get back on. However AOL generally speaking for the services it provides is excellent. In fact I suggest you try it if of course you can afford to. Don't you use a rather cheap ISP down there, something regional? And Rileygotcha Polly is another hypocrite who boasts of all that bread and he doesn't use AOL either, right? For all I know you could have TRIED to write something about me to AOL although I'm sure the recipient had a hard time following it and you are entitled to think you had impact. You're a joke. What's eating you alive is the fact that I took legal action against you during the time you were harassing me by phone. Remember that Bobby Boy? I wonder if Harrison knows about it? And then I got a death threat and the next thing you knew was that you had to fork over some loot to retain a lawyer in Paterson. Remember how I went to court and your lawyer asked, "If I give you this letter of apology from my client, will that be satisfactory." I suppose that bit of supplication plus the requests for mercy on your behalf by Lenny Schaier "got" to me. They shouldn't have and the next time they won't. There will be a next time because of your nature; you can't keep out of the personal lives of your fellow man. And when you finally tick off the wrong guy, he will take you to the cleaners because the only thing you'll have left will be your boxer shorts. And I have a feeling that guy might be me. Jimmy Dale should have sued you and so should have Bob Leger but both felt sorry for you. What a shame! And how about how hard you tried to get Don Anderson tossed off ham radio by calling his probation officer while fabricating stuff about the fellow who had admitted his guilt and was on the road to rehabilitation? Did you know that for every call you made to hurt him, I made one to help and MINE worked? The reason you're sore at me is because I can read you as well as a smart quarterback reads defense. And once again, be a sport. Get on AOL or MindSpring or another major ISP instead of talking about them. The proof of the pudding is in the eating so grab a spoon.

Hi David

Don't feel bad. I've been a Ham for some 41 years now and never understood why they ever had a code requirement over 5 wpm anyhow.

I worked 40 meter CW for about 25 of those 41 years, then I burned out on CW entirely.

Those who want to use CW and enjoy it, more power to them, but in this day in age, perhaps a typing test would be more appropos that a code test.

Sure, guns can kill. So can knives, fire, cars, poisons, household chemicals, paint, ladders, electricity, bathtubs, swimming pools, animals, reptiles, doctors, medicines, etc. These things do kill more people than firearms every year.

Three key facts that are routinely ignored by the anti gun crowd:

Less than .1 (1/10th of 1) percent of all legally owned guns in the US are ever used in a crime.

Thousands of machineguns have been registered and legally owned by private citizens in the US since the 1930's. To date, not one of these weapons has ever been used in a crime.

Without exception, in every state where people can legally carry a gun, the violent crime rate has been reduced significantly.

If the antigun crowd was truly concerned with saving lives and not just disarming the public, they would be vastly better served by going after those in the medical profession. The number of annual deaths caused by medical malpractice outnumbers deaths by firearms by a factor of 10 to 1. But since the AMA is strongly aligned with the liberal agenda in congress, and since facts do not serve the selling of the anit-gun hype, this fact is conveniently overlooked by the left.

You can sure tell that 40 years of the liberals' efforts at "dumbing down" the common man is working. Just look at all the people who actually believe that guns cause crime. It's not their fault (boy, doesn't that sound familiar) though, the ability to independently reason and logically analyze an issue was "programmed" out of them years ago by the public schools and the media.

Glad to see our Second Amendment Militia training in such a
rigorous fashion. But what's the upper limit of our nation's
militia? Isn't it 40 years old as defined in the CFR? If so,
it seems that gun-ownership would be limited to those under 40.

>Remember, shooting guns is an olympic sport. Nobody killed there.

There was a fellow here who participated on his high school rifle
team; he was an expert shooter. Twenty years later he walks into
his workplace, Xerox, and kills seven of his fellow workers.

Those who thought the internet will be the great marketing tool are wrong. It has neither the needed bandwidth or reliability to use it for anything other than spouting off on newsgroups, sending email to avoid toll calls, chating like some sort of TTY CBer or reading the news and weather, or other "official" information.

The ARRL thinks ham radio is dying because of the internet, not because of the lousy attitudes of many hams, its own lack of advertising in public, and high equipment prices, should cool its liberal reformist impulses now and wait. Of course, that won't sell more "study materials" as the M.O. site gleefully declared this week after the 5 wpm welfare license was announced.

==========
Internet entreprenuer can't give money away

United Press International - January 14, 2000 22:27
By JOE FASBINDER UPI Business Writer LOS ANGELES, Jan. 14 (UPI) --
Internet marketer Mike Enlow
recently performed a bizarre experiment to prove how hard it
really is to make money on the Internet.
"I've always said that if you don't do everything exactly right
in your online sales campaign, you can't even sell hundred dollar bills,
let
alone a normal product," Enlow said. "People don't seem to believe me,
so I
decided to put it to the test."
Enlow tested his theory by putting up a web page offering free hundred
dollar bills for
several months to anyone who would pay the postage to have it mailed to
them -- without a single taker.
Enlow, based in Magnolia, Miss., says he's not surprised, saying he's
tired
of all the hype surrounding the Internet. The Internet, he says, is
causing unsuspecting
entrepreneurs to spend their money on a mistaken "pipedream," instead of
using the classic, proven marketing methods that can lead to success.
Enlow says he is now on a mission to correct the false beliefs that
exist
about the Internet as a marketing medium.
But the days of free hundred-dollar bills are over.
"Unfortunately the plain truth is it's hard to sell anything on the
Internet," Enlow said.
"And if you don't mind my being blunt, I'm going to tell you the main

reason
people aren't buying from you: They don't believe one darned word you
say.
"Literally. They're sick of being lied to and misled. Tired of
outrageous
offers, unsolicited E-mail spam, products that don't work as advertised
and
people who hide behind fake names and fake E-mail addresses."
Of course, there's a reason Enlow has been trying to give hundred dollar
bills away. He's selling a service -- the Masters of Marketing Inner
Circle,
which helps entrepreneurs make money on the Internet -- without having
to
give money away.
Full details on this strange experiment can be found on his Web site at
http://www.enlowcircle.com/go/fullstory, as well as a free report on how
to
maximize your profits online immediately.

Yessiree Bob, a little 'Kentucky Windage" with muh Glock .45 and I'll
blast that F16 that's trying to strafe me out of the sky ... Then I
dress up in my bear costume and with my semi-auto 'Ought Six' I shoot
down a couple of attacking Apache choppers ..... Then as nightfall
comes in I sneak up on that tank , roll a big rock in between the
track and the sprocket and pour flaming gasoline into the air vents as
the tank helplessly moves in a circle and blast the hapless govm't
agents as they make a flaming exit. Yessiree Bob with muh Glock and
Hollywood on my side I have No Fear !!!

Exactly! And, why would I (who has used just exactly that method to get ready for a ham test) be so indignant about its use? My indigence is more directed at the attitude that says the written exams are good just the way they are, while saying that CW should be a mainstay in the testing process to keep the hobby technically oriented. One has nothing to do with the other, and the tests are NOT a measure of technical knowledge, either!

I know my license was not difficult at all to get. I know more of the material now than I did at the time of the test because, at the time of the test, I knew nothing more than a right answer with a question. Indeed in many cases even the test made no sense to me.

In my case, CW is/was also an impedance to my desire to go any further in the hobby. MAYBE if I had studied for 13wpm or 20wpm up front it would have been different. But things are as they are, and I have never used CW since I had to learn it for a test. CW did nothing to make me feel any more determined to go further in the hobby than the man in the moon. I have also heard this from many, many hams who entered the hobby around the same time I did.

Dislike the way I got into the hobby all you want. That is not the point. The point is: don't use the fact that the "tests are hard enough" and that CW is the guardian of technical knowledge in the hobby as an argument. I am just one of I suspect many who are examples of why they are not.

Oh, and Dick? This isn't directed necessarily at you--but to the topic in general, and to those who believe as I stated.

Big guns, little pistols.

I'm always positing reasons other than the ARRL battle cry that the web is killing ham radio and therefore they need to make the license structure one which can accomodate three year old, not the current crop of five year olds and GED holders who are hams.

Did the contesters running the ARRL ever stop to think that perhaps it's just too damn unpleasant to get started these days inn ham radio ? AndI don't mean 3950 or 14.313.

I mean, who wants to get on then find they need an amp or tower and beam to compete on the weekends, when the contesters are out with their leukemia causing signals ?

Sure, duirng the week you can work Europe with 5 watts on CW, but notno the weekends when most hobbyists are available.

Some weekends, you can't work DX with 100 watts due to the splatter from the big guns.

If the ham hobby didn't thrive on a bunch of middle aged geeks who think that owning a KW makes them a man or technical guru, perhaps more people would be attracted to it, or woulds have upgraded within it.

It's an arms race. Almost everyone with an amp uses it.
If station A can't work XZ0A, he cranks it up to 1001 watts... from there it's station B who swtiches in the high stack of phased yagis, then station C puts the KW into his high stack.

Meanwhile, the 100 watt and a wire station gets disgruntled and takes up model railroading.

Then ARRL points to the lack of upgrades as evidence the requirements are just too darn hard, by golly, by gosh, golly gee.

Your question about why the ham bands are nothing like CB is a good one. In my opinion, two things:

1. Testing. The real dirtbags lack the discipline.

2. The ham "culture." Most people want to fit in. This is a human trait. Almost all hams, except for a few well-known clusters on 80M and 14.313, are very courteous and "professional" in the way they operate, and simply do not want to QSO with people who behave as "CBers."

The real question is why did CB get the way it is? I don't have the answer to that. No licensing at all is plainly part of the answer, but perhaps not all.

Kim is exactly right. The ham "culture" tends to socialize people to behave as other amateurs do, i.e. courteous, professional, etc. It isn't just testing, CW or theory.

Listening a lot on the bands is far and away the best way to ensure
that you are operating properly. That and knowing the band
restrictions and how to put out a clean signal. It isn't hard. Enjoy
the hobby. Congrats on your license.

Gun critics ALWAYS conveniently place a modern army group against an opposing citizen group isolated in some log cabin, armed with deer rifles - like the Montana bunch... SURE in such an isolated and STUPID scenario, the citizens have little chance...

BUT, merge a few hundred terrorists or other dissidents with the "ordinary" citizens walking down the streets of any major US city - from which they are free to strike out at will - and THEN describe to me exactly how marvelous those smart bombs, tanks and supersonic fighter-bombers are going to be!

What good is a fully outfitted aircraft carrier against a dozen scattered/hidden dissidents in Manhattan?

What are you gonna' DO, kill EVERY citizen in order to get the small percentage of REAL "revolutionaries" or terrorists? I suppose that "mentality" DOES make sense to the SAME folk wanting to disarm ALL citizens in order to reduce the FEW actually abusing guns in our current society...

In England, the IRA has been a thorn in the side of the British for DECADES - WHY haven't the Brits simply overwhelmed them, wiping them out with their "superior firepower"? INSTEAD, the steady, resolute dedication of the IRA has finally forced the British government into serious discussions recognizing the demands of the IRA, and active steps to correct them - would that have happened WITHOUT force of weapons by the IRA? And what is the VERY FIRST counter-demand by the Brits? Why, they want the IRA to disarm - can we guess WHY?

Dedication, stealth and determination CAN overcome VAST amounts of "superior firepower"!

As long as the *battlefield* is carefully selected...

Then why must we be tested for code to access 160M?

Is this what you tell the lawyer that is representing you in the "Cut
Coax" incidence?

Or did I get the wrong Steve again (not that either one is ever right)?

2205. A TIP OF THE CAP TO K3EKO

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-15 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <85qgarqnd1@nntp4.atl.mindspring.net>
Source record: 121502

At one time there was considerable friction between me and Frank Todd, K3EKO and I'm sure quite a few would like to see it continue. It ended. For more than a month he and I have been communicating privately or as privately as the Internet allows and I've grown to really admire him. I learned a lot about that fine young man much of which will remain confidential and for all who do not know what I know about him, I'm saying he's highly intelligent and courageous and deserves the respect of every ham on the air and on this board which I own. I want to openly apologize to him for anything I had written negatively which includes the episode visiting Herbie on Saint Croix. There must be some good in everyone and I therefore thank Herb and Monika Schoenbohm for giving Frank a fine Caribbean vacation which he richly deserved. We hams hear voices and read posts and draw conclusions which oftimes are off base. For instance when Frank was being "wined and dined" by Al Abernethy, K3QAM and others whom I didn't particularly like, I saw him as a mere pawn who was being trained to use ham radio unlawfully. Frank was coming across abrasively and insolently which made me view him as nothing more than a punk. Something happened which put things into focus and I'll be darned if I can remember what it was but suddenly I saw him quite differently. We began e-mailing one another and I'm sure he then saw me differently too and now our friendship is etched in stone. Once again I will not divulge certain elements that changed my opinion of Mr.Todd but this I'll say. That fellow attends one of the best higher centers of learning in this nation, a school of which I'm especially proud, Penn State University. He is not in good health but is determined to take one day at a time and come through the siege. And fellow hams; he WILL-that's the kind of guy he is. And furthermore I'm going to attend his graduation and if I have to sit with "Queenie" to do it, that's just fine. Frank's welfare and success transcend any personal dislikes I have. A tip of my cap to you Frank Todd and God bless!

No, but when the ARRL decides that it's Hiram Maxim's birthday,
we can all go around signing "stroke 200"? Who the hell is the
ARRL to decide stuff like that? If they can decide, or if they
can ask the FCC for permission to identify this way, why can't
we (the 20+ WPM, 1-percenters, Extra Class pre-April 15th) request
the same?

Joe K7JOE "stroke 20"

I do believe the rules do NOT say "HF" like TLB did. The rules
say "below 30MHz". RF frequencies below 30MHz include 10KHz to
3MHz which are NOT HF frequencies. These include VLF, LF, and MF.

That's exactly the function of an entrance exam which is an absolute
MINIMUM entrance requirement. Now that Dick is in, he seems to me
to want to make the exams close to impossible to pass (even for him).

You're wasting your time, Brian. Americans were stupid enough to
believe that a decorated, disabled war veteran (Bob Dole) was a greater
evil than Clinton in '96.

Doc,

You owe Herb Schoenbohm a thank you for helping put Frank on the correct path. One day Frank was on 20ssb from Herb's station. I was on frequency and broke in to say hello to Herb. Herb said would I like to talk with Franky, I declined. He asked why...and I told him I didn't appreciate how he treated me on the air without him even having a callsign (at that time). A short pause later Frank came on the air and apologized to me. I accepted and from then on have been in contact with him via e-mail.

As for him talking with you and some of the "others in our camp" ...he and I discussed it and he made the proper moves..with some minor help from me.

Frank Todd is a good young man now, and a asset to amateur radio.

WHY SHOULD ANYONE NOT SPEAK HIS MIND BECAUSE YOU GO TO CAPITAL
LETTERS???

The FCC changed its mind in lowering the code standards. There is nothing to keep it from doing the same with written exams. A step at a time, Carl.

Strive for mediocrity!

right)?

Dear Pinky, glad Lennie saw fit to send you to the market for more of
his Prep H and Depends.

I didn't need no stinkin lawyer for this. Why call someone like little
Roger B, defender of the drug pusher and child molester when it was so
simple to handle myself. Anyway, the admitted vandel has made
sufficent restitution and the new Yaesu 1000MP is doing really REALLY
great. So much better than that old 940 that "died" because the SWR
protection circuits failed.

As to your final comment, the truth be know, is that both Steve and I
can change and be right all the time, you must suffer with the
knowledge that no matter what you do, you'll always be a little wiseass
butt kisser. Must suck so much to be you. But then again, you could
be PortaJohnnie, the merely great KC2FNG or that wonderous spell
checker, W5(breast), who seems to spell a great deal wrong. Still, all
in all, I know no one who'd want to be you.

Ok Pinky, Len needs changing. Seems he's on his historical "I've been on HF" kick and you know he pees like a puppy when he gets excited.

Back to work Pinky...I'm back up the hill for a bit of night skiing. Conditiond great but a tad chilly for some of the low landers. The geeks are amazed al the people running around in the backyard having a snowball fight in their swim suits, but then again, the hot tubs set for 110F. It's only $$$$

toodles Brain. Glad you maintained that childish demeanor into the new year. Heavens knoes what we'd do if you actually turned sub-human

Give my regards to the geezerly one. glad he made it. Reminds me of elmer fudd that old one does. Always trying to catch the wabbit but never can. Can't pay enough for the entertainment the two of you funsters provide. never change

"Brad Dyson" <n4trc@prodigy.net> wrote:

> Ten-Ten International is an amateur radio club that does little more
> than swap ten ten numbers between members...

Every one is entitled to an opinion, even a wrong one. Since a
fundamental part of all 10-10'ing activity is the exchange of numbers
(much like exchanging signal reports in DXing, but more demanding)
including the nets, the QSO parties, and number collecting, etc., you
are partially correct, but misleading.

> and ultimately they have succeeded in making the 'novice voice'
> subband a members only club...

If you want to fish, you go where the fish are. But I think your
characterization of a "members only club" is inaccurate. Of course since
the whole of your amateur existance is comprised of only one solar
cycle, I can see why your experience during two nadirs would lead you to
believe that only 10-10ers are there. Doing what the organization was
founded to do.

> Many 10-10 members won't give you the time of day if you do not have a
> membership number...

There are lids on every band. I'm sorry you feel as if you've been
treated that way. It's not been my experience.

> whenever I operate 10, I do one of two things: make up a number
> (usually 4 digits ought to do it),

Hmmm, would you characterize that as an honorable action? Or something a
lid would do?

> or stay out of the Novice section if you can (although they often
> creep up in the General portions, too!).

I believe that sub-band is often referred to as the Novice/Technician
subband, although amateurs of every class are authorized to use it.
Oddly enough, Generals and above can operate above 28.500 MHz. Even if
they have 10-10 numbers.

> They pretend to represent ALL of the ten meter band,

They do no such thing. Their raison d'etre is to promote 10 meter
activity. Their sole arena is 10 meters. They don't claim to represent
anyone.

> but I have NEVER heard a 10-10 member on 10 meter CW bands,

Doesn't mean they're not there, and what does that have to do with anything anyway?

> ...and as I recall, the organization never really came around until
> the mid eighties 'Novice Enhancement' gave ten a 'boost'.

Well, the organization was formed in 1962, in the bottom of the sunspot cycle. The 11 meter band had only recently been reallocated which many hams were very upset about. With little activity on 10 during the nadir of the cycle (then as now) the organization strove to kick it up a notch so that we didn't lose 10, too.

Of course during the sunspot peaks (1968, 1979, 1990, and a couple of years either side) the 10-10 group wasn't needed to spur activity; there was plenty. but in the periods in between, early 70s, middle 80s, middle 90s, they provided a lot with nets, QSO parties, and paper chasing activities.

The 10,000th number was given out in about 1976, the 25,000th number in about 1981, and the 40,000th number in about 1985, so I guess there was *some* activity before Novice Enhancement in 1987 (I call that "late 80s", but why quibble) which was about when you were first licensed. Coincidentally, the new cycle was on its upswing about then. Do you think the 'boost' in activity on 10 was a product of that, and not Novice Enhancement? Or a combination? Or might your perspective be a bit skewed?

Name the "communication giants" who wish to take our HF frequencies.

>WE HAMS ARE STRONGER IN NUMBERS!

Stronger to do what? We received our present-day HF allocations with
less than half the licensees we have now. More HF spectrum is being
considered for us as we speak (NTIA proposal).

I would like to know just how the FCC just hands it down? He either passed or didnt pass! If he is licensed to go there then it is obvious that he passed his test and was "Granted Priviliges" for that band or is listening through a receiver!

It is apparent that some ones opinion hurt someone elses feelings. I will add my opinion as well, 10-10 # to me kinda sounds like a CB ten code. Are they trying to bring the CB to ham?

Heh! It's not a stupid thing, but the fact that they chose 10-10 could have room for discussion! Just because an individual or group discussion is boring to you doesnt mean it is boring to all.

GG, why not solicite some opinions from the good folks on here about your pasttime, "Vintage Radio," i.e., tube-type gear. Care to bet that it's not everyone else's "cup of tea"? Will your grandchildren be any more impressed with your boatanchors than with the books filled with numbers that you speak of?

Filling 10m, with its 1.9 MHz width, with lots of happy operators should not be condemned by anyone.

Well my pasttime is not boatanchors, although I do have a vintage Collins AM station, but it is vintage broadcast radios of which I have over 75 right here in the room with me. All restored and working. Nice cathedrals, tombstones, Bakelite, and sets that date back to the early 1920's. And yes, my grandchildren are impressed with them, and yes, I know they are more impressed with the old radios than they would be of a book full of numbers, they are young, but not stupid.

There is a world of difference between 5 wpm and 13/20 wpm.

At 5 wpm you can still get away with thinking about each letter after it
is transmitted. By 13, and quite definitely by 20, you had better be well
integrated with the code, recognizing the "sound" of patterns, or you will
fail quite miserably.

Such CBers exist. You also hear hams say "What's your QTH?" - which
means "What's your what is your QTH." Just as bad, poor usage abounds
in both radio services.

Tom,

I've worked on 100s, 200s, 220s and many other portables over the years. All of them can be a bear to work on if you are not experienced with working on portable equipment. Hey, the first time I worked on a piece of equipment with surface-mount stuff I cussed up blue streak (my language darn near desoldered the parts without the soldering station :)). Now, it is second nature.

I'll totally agree with you that most modern handhelds have poorer RF performance than the 70s vintage radios like the 220, both TX and RX. However, those "bells and whistles" is what sells radios.

Honestly, relax and back up a bit from things and try to acheive a detached
perspective.
This restructuring will do no more harm than the no-code tech. change did.

Things will go on largely unchanged after 4/15/2000. Don't panic.
About the only real change will be that Extra and General licenses won't
mean quite
as much as they used to. Dumb, lazy, or slothful people will still be kept
out by the
5 WPM requirements.

Don't forget the FCC's jamming of a ham radio station durring the government attack of that church at Waco.

No, I'm really not bitter. I just feel that lowering the bar with respect to anything is the first step on a slippery slope. Look at the American public School systems.

I have my ticket, I only spend time on the CW bands so it really doesn't effect me directly. I'm just trying to get people to think about things, and I'm not saying there is a right or wrong answer.

Peace to all!

On HF, the "special band segments" in which CW/RTTY/FSK/digital modes only are permitted are as follows. (All frequencies are in Mhz.)

28.000 to 28.300
24.890 to 24.930
21.000 to 21.200
18.068 to 18.110
14.000 to 14.150
10.100 to 10.150
7.000 to 7.150
3.500 to 3.750
1.800 to 2000

have a whole lotta stuff for sale. Its a moving sale, and everything
must GOOOOOOOOOOOOOOOOOOO!!!!!!!!!!!!!!!!!!..

All this equipment will be at the TRW Swap Meet on Saturday 1/29/2000
the swap is on the corner of Aviation Blvd., and Marine Blvd in the
city of Manhattan Beach, California times 1/29/00 Saturday 7:00 -
11:30 AM.

TRANSCEIVERS.............

1. YAESU FT-902DM HF TRANCEIVER VERY NICE $460.00
2. ICOM 211digital display, built-in p/supply 10 watt all mode 2 meter

transceiver, works good $220.00
3. Kenwood TS-700S digital display 10 watt 2 meter all mode

transceiver, with a Communication Specialists TE-64
selectable PL/Encode Unit. Built-In power supply, Kenwood
hand microphone, and manual, WORKS great $275.00
4. YAESU FT-127RA 220 MHZ mobile transceiver rig works $85.00
5. ICOM IC-22S 2 meter mobile transceiver, turns on $50.00
6. SWAN CYGNET 270 transceiver works OK $75.00
7. COURIER GLADIATOR 40 CH CB SSB/AM $89.00
8. TEN TEC 22 MODEL 579 20 WATT CW SOLID STATE TRANSCEIVER
10,15,20,30,40,80 meters. With # 979 matching power supply .

Optional accessories # 679 keyer kit, and # 226 crystal
calibrator, condition is Very Good, I don't do CW so have not
tested it $200.00
9. ICOM 25 H 45 watt 2 meter transceiver with comm spec pl unit in
microphone with bracket mic, and power cable $95.00
10. TEMPO commmercial line CL 146 15 watt 2 meter transceiver works
manual no mic $59.00

11. COLLINS S-LINE 32S-1 TRANSMITTER, 75S-1 RECEIVER, AND
HOMEBREW POWER SUPPLY, THEY LOOK GREAT ALL ORIGINAL
PAINT, KNOBS, AND FEET. THE FRONT PANELS LOOK FANTASIC
WITH CABLES, AND MANUALS....$650.00

ACCESSORIES........

12. YAESU FV-901DM synthesized scanning VFO $159.00
13. YAESU YO-901 Multiscope $159.00
14. YAESU SP-901P external speaker $75.00
15. YAESU YC-500J Frequency Counter $59.00
16. YAESU black series 601 external speaker $39.00
17. HEATH SB-220 AMPLIFIER $ 485.00

18. PALOMAR P310X Preamplfier $50.00
19. COURIER PORT-A-LAB mod/power/swr/field strength $37.00
20. HAL ST-5000 $30.00

WATTMETERS......

21. BIRD 43 with case $175.00
22. BIRD 100C $40.00
23. BIRD 5OH $40.00
24. BIRD 100H $40.00
25. BIRD 250H $40.00
26. BIRD 1000H $60.00
27. BIRD 5000H $80.00

28. PALOMAR PT-407 300 watt antenna/tuner $75.00
29. AMECO 621 VFO 50/144/220 MHZ $39.00 untested, nice
30. AMECO TX-62 $30.00 untested

POWER SUPPLIES

31. ICOM PS-30 $175.00
32. ASTRON RS-20A $60.00
33. ASTRON RS-20A $60.00
34. EPS-20M 20 amp power supply $60.00
35. SWAN PSU-1 power supply/speaker $40.00
36. 2.5 amp power supply $9.00

KEYERS.............

37. AUTEK MK-1 electronic keyer $35.00
38. LITTLE KEYER $10.00
39. HEATH ELECTRONIC KEYER $25.00
40. AEA MORSEMATIC KEYER $40.00
41. TRANS-KEY # TKM-2 C.W. MONITOR & OSCILLATOR

RECEIVERS....

42. NATIONAL SW-54 untested fair condition $25.00
43. HALLICRAFTERS S-95 untested fair condition $20.00
44. HYGAIN Proscan scanner $20.00
45. COLLINS "SOMETHING ????"

PADDLES........

45. HAM KEY $40.00
46. BENCHER BY-1 NEEDS SPRING $30.00
47. VIBROPLEX OLDER....$50.00
48. OLD PADDLE NO NAME $40.00

ANTENNA SWITCHES

49. 6 POSITION
50. DAIWA CS-201 2 POS.
51. ANOTHER 2 POSITION

52. DAIWA 2 POS

53. YAESU LANDLINER BLACK 301 PHONE PATCH $30.00
54. PALOMAR NOISE BRIDGE
55. PALOMAR NOISE BRIDGE
56. (2) HEATH DUMMYLOADS CANTENNA
57. YAESU CLOCK $35.00
58. YAESU BLACK SPEAKER $25.00
59. KENWOOD MS-1 DC DROP IN FOR TR-2500
60. KENWOOD SMC-25 SP/MIC
61. ICOM HM-46 SP/MIC
62. ICOM SM-6 DESK MIC

ALL KINDS OF METERS, WATTMETERS, FIELD STRENGTH METERS, LOTS OF TVI FILTERS, MICROPHONES, ANTENNA SWITCHES, SOLID STATE AMPS, ROTOR BOXES, RACK MOUNT, MISC.....EVERYTHING.....

DO NOT MISS THIS TRW SWAPMEET ON 1/29/2000 SATURDAY

I WANT TO TAKE THIS STUFF TO THE SWAPMEET FIRST, BUT WILL ENTERTAIN ALL OFFERS.....

THANK YOU, & 73,

ALL PLUS SHIPPING CHARGES.....

Thank You & MERRY NEW YEAR..

Part 97 doesn't specifically address suffixes except
in question of "instant" upgrades where valid CSCE
holders can use specific suffixes to indicate that
they hold examination credit to use certain band/sub-
bands not encompassed by the current FCC-issued license
they hold. I wouldn't encourage such practice, to me
it would be simply a sour grapes response to the FCC's
elimination of the higher speed code elements.
The elimination of higher speed code elements is a
DONE deal, no "sour grapes" response within the
amateur community be it form of amateurs attemping
to identify themseleves on the air as "real" hams
because they passed a 13 or 20 WPM code element or
those that advocate VE's boycott participation in
the licensing process after April 15th is going to
make the FCC reconsider their action and restore
higher code speed elements as part of the licensing
requirement.

A gun is just a tool, just as a shovel is just a tool. A shovel can be every bit as effective as a gun, used as a killing tool. There are probably more shovels in circulation than there are guns. Why aren't more people killed or injured with shovels?

The facts are clear and reflect the true reason that AF2Y is no longer on AOL. AOL was contacted by stockholders and the information went directly to very high level executives and the situation was acted upon. Mindspring has also been sent copies of e-mail documentation and if this bum reverts to his past behavior and postings then it will be dealt with swiftly. AOL is a great company and us stockholders acted in the best interest of the public and AOL,

That "TV special" was an NRA infomercial. I have viewed the very scene a half dozen times now, as the whole thing airs twice a night on various channels.

This sort of thing makes you understand why it is necessary for the words "Paid Advertisement" or the like to appear when they air these things, and even so some are still taken in by what is cleverly crafted to give the appearance of news reportage.

> ham radio?

Jeff,

Its abundantly obvious that you and a few others are really bitter
about the FCC's decision to step down its Morse recruiting
campaign which you've relied on for so many years to bring
new CW ops into ham radio.

However, the "No-Theory" stuff is VERY old GARBAGE
which has been thrashed about by the PCTA for a LONG time.

The FCC has also QUITE SOUNDLY made it clear that they
DO view the ARS as "a primarily technical service."

"We are persuaded that because the amateur service is fundamentally
a technical service, the emphasis on Morse code proficiency as a
licensing requirement does not comport with the basis and purpose of
the service. We note, moreover, that the design of modern
communications systems, including personal communication services,
satellite, fiber optic, and high definition television systems, are based
on
digital communication technologies. We also note that no communication
system has been designed in many years that depends on hand-keyed
telegraphy or the ability to receive messages in Morse code by ear.
In contrast, modern communication systems are designed to be
automated systems. Given the changes that have occurred in
communications in the last fifty years, we believe that reducing the
emphasis on telegraphy proficiency as a licensing requirement will allow
the amateur service to, as it has in the past, attract technically inclined
persons, particularly the youth of our country, and encourage them to
learn and to prepare themselves in the areas where the United States
needs expertise."

Thus, is is INCONCEIVABLE that the FCC would entertain ANY
plan for a "no-theory" license, becaue it would be DIRECTLY counter
to their primary goals for the service.

SO GIVE THE PCTA FUD A REST, OK???

> >So I look at it like this. In the long run this is going to create

HF broadcasters, all sorts of point-point data operations, etc.

> >WE HAMS ARE STRONGER IN NUMBERS!
>
> Stronger to do what?

Survive ...

> We received our present-day HF allocations with
> less than half the licensees we have now.

Yes, Jeff back in the distant past (where you still live).

If the establishment of the ARS were just being considered
today, it's highly unlikely that we'd ever get such extensive
allocations as we now enjoy. We have been lucky to hold
on to what we have. I doubt that we are going to see any
significant expansion in the future, due to the economic and
political realities arising from the demand for (and incredible
value of) spectrum for commercial services.

> More HF spectrum is being
> considered for us as we speak (NTIA proposal).

Unfortunately, that's a stretch, Jeff ... the NTIA proposal is
simply a thought, given almost in passing, that the abandonment
of certain small segments of HF spectrum might allow an
amateur allocation there ... there are competing services, as
stated above who would like more HF spectrum ... and they
would be willing to PAY for it at auction ... something we could
never compete with.

Don't get me wrong, as a soon-to-be-Extra, I'd certainly love to
see us get more spectrum at HF ... I just don't think it's nearly as
likely as you imply and that even if we do get something it will be
minimal chunks at best.

Anyway, PLEASE put the "no theory" stuff in the trash can where
it belongs ... it 'aint gonna happen, so it's just useless FUD.

Comeonguys... This isn't worth the time and trouble! Don't you think FCC has a lot more to do than move child pronography, etc. FCC employees are a lot more knowledgable re: communications equipment, sofware, internet than you and I. They are certainly aware they can rather easily be tracked-down for posting porn, etc. on the internet. Especially thru FCC connections! I work for a sensitive government agency, and the NSA guys are on our tails every minute.

According to Johnny Come lately KC2FNG, the people who bring you 1200 baud HF email are chomping at the collective bits to take over our HF allocations. The satellite people are just dying to develop our HF bands into a cellular phone system (imagine a little phone with a 1/4 wave antenna on it :-)

from a recent Johnny on the pony tirade..

> yet you apparently know
>> nothing about the work of WA6IVA, KE6RK, DL1ZAM, and others in the

>

According a here unmentioned NCI BoD member, the Lucents and the AT&T's of the world are looking to develop HF Internet access so people can download their smutty pictures while on the way to work.

I think PortaJohnnie knows best. He's been swl'ing for 33 years and has a true handle on the situation. Heck, he's training his dog for a general license.

Feel free to contact him or his psycho-ego snapper mower 1 for more details.

Replace "shovel" with any number of non-gun appliances, and
the answer is "They are!".

The fact is that the liberal press, IE, opponents of
private gun ownership, choose to ignore all that and give
all the (negative) press to violent crimes involving
firearms alone. And virtually *none* to the vast numbers of
cases where citizens ward off crime and violence by the
simple fact of owning -and making it known at the right
time- a firearm.

So removing all firearms from private individuals will
solve such prolems? Surely you're not that obtuse. That
didn't start it nor will it stop it. Look what the "war on
drugs" has done to stem the flow.

All this push to destroy private ownership of firearms has
done is to polarize society. It won't get any better. A
friend told me recently that he heard a fellow who just
retired from the Marines say that he got out because
officials had warned them that they would someday be using
all that military training and hardware against fellow
Americans...

But those limitations apply to RTTY/digital, not to CW. Here are the
actual HF ham frequencies on which CW is allowed.

ALL and BTW, 1.8 is not HF.

Unhuh. So ask your fellow NCI BOD guy about his intent to
get rid of the theory testing as "unnecessary". And his
positioning himself on the VEC QPC so as to "be there", in
position when FCC illegally abdicated its responsibilities
to the QPC, which is accountable to NO ONE for the content
of the written tests.

> needs expertise."

Yeah. Then they pointedly ignored NPRM comments blasting
the question pool writtens as totally ineffective at
determining technical learning and knowledge of successful
examinees *WITHOUT A SINGLE MENTION* IN THE R&O.
Sure, they're interested in "maintaining the ARS as a
technical service". In **LIP SERVICE** ONLY.

He still has to pass a code test to get on 10 meters. For all the hoopla
after the FCC R&O, passing a Morse code test is still (and will be even
after 15 April) required to get on HF.

That was the whole point of his "I guess I can cheat" post a couple of
weeks ago.

Yeah Cockroach, you are back. If you slander people on Mindspring like you did on AOL, Mindspring will cut you loose like a burning ship when the complaints and copies of your workmanship start rolling in to their abuse line.
Also,
Your days on Amateur radio are running out if you keep qrming. Riley H has been contacted about your latest diliberate interference gig.

All your skankey buddies are on 14275. join them there, Rube , Donny , Dean,(etc) pukey maggots all group together. Thank you Bob and Lenney for giving this creep the bums rush off AOL!!

Proof that "our economy is the direct result of Reaganomics"?

As an aside, quite a few folk benefitted, i.e. those that had low
(6 %) fixed interest rate, 20+ year mortgages, from the
pre-Reagan inflationary policies of the seventies. OTOH, some of
us younger folk are having to pay off the national debt without
ever having received any benefit.

> Again because of the private sector innovation. Nothing the government runs
> is either cost effective or productive.

Actually the same can be said of the private sector in industries
where there simply isn't a lot of competition.

> You would worry too if you knew that you could not back the currency you
> print with anything of real value. The country was taken off the gold
> standard by the Government to make it easy for them to manipulate the value
> of paper money to hide their deficit spending. But it's a "house of cards"
> and if they lose control the scheme will be exposed with drastic results.

You really need to take an economics course. What "backs" the
currency is the potential "value" of the good and services one
can purchase with it. Complying with the gold standard merely
fixed the money supply -- it wasn't allowed to grow or shrink.
The problem with this is, for example, in a growing economy this
would be deflationary. Interest rates would rise and banks would
be tight with money. This would make it difficult for
entrepreneurs to borrow money and would inhibit further growth.

> > Welfare roles are shrinking.
>
> Because many states took it upon themselves to reduce or eliminate their

I agree with your reasoning but why is this always a good thing?

> > Verdict on eight years of Clinton is obvious; he's effective.
>
> Sure, he's an effective lier,

Yep, he's a liar. So far, I don't think there is a politician
who has let me down in this regard.

> > Dole was a spokesman for the old failed ways.
>
> Sure, he represented those old failed values like honesty, integrety,
> respect for his country, the people, the military, and the office of the
> President.

This is posture. Success requires detailed policies. Few of
these detailed policies are the brainchild of the actual
President.

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

JANUARY 2000

Jan 2 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Jan 9 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Jan 23 (Sun): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Jan 23 (Sun): Cicero, IL - Wheaton Community Radio Amateurs Mid Winter Hamfest - 2000 at the Chicago Motor Speedway. 3301 S. Laramie, Cicero. Located between Central and Cicero, between the Ike and the Stevenson. Tickets $5.00 in advance with 4 stubs. Free parking. Talk in on 145.39 (-.600) 107.2 or 103.4 Hz PL and 444.475 (+5.0) 114.8 Hz PL. Info: www.w9ccu.org or send email to hamfest2k@hotmail.com.

Jan 23 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

Jan 30 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

FEBRUARY 2000

Feb 26 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6,

or $5 with discount coupon available at WebSite.

Feb 27 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

MARCH 2000

March 19 (Sun): Sterling, IL - Sterling-Rock Falls ARS. info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL 61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

Mar 25 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

March 26 (Sun): Grayslake, IL - Lake County Fairgrounds. North Shore Radio Club. http://www.ns9rc.org. ALL INDOOR, Radio, Electronic and Computer Swapfest V.E. Testing 9AM to Noon, Door Prize Drawing Every Hour, Admission $6 at the gate / $5 in Advance. Door Open at 8 AM. Set-up at 6AM. Free Parking. Cafeteria Open. Talk-in Simplex 146.52 & NS9RC Repeater 147.345 +.600. For NS9RCfest Information Call (847) 291-4160 until 10 PM. Info: Jacob Fishman, KF9ZF, PO Box 1066, Highland Park, IL 60035. Phone: 847-291-4160, Email: kf9zf@lightwriters.com

APRIL 2000

Apr 15 (Sun): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Apr 29 (Sat): Stickney, IL - DuPage ARC. http://www.w9dup.org, Info: Ed Weinstein, WD9AYR, 7511 Walnut Avenue, Woodridge, IL 60517. Phone: 630-985-9256. Email: DARCHamfest@aol.com

Apr 30 (Sun): Arthur, IL - Moultrie ARK. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937. Phone: 217-873-5287. Email: rzancha@one-eleven.net

Apr 30 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

MAY 2000

May 20 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

May 28 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

JUNE 2000

Jun 4 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at gate. Talk-in 146.955, -600, PL103.5 Hz. info: AL Erbrederis, tel. 1-815-498-9675, 262 Easy St., Somanauk IL.60552. ERB.N9PIB@juno.com. http://www.qsl.net/w9mks. E-mail: w9mks@qsl.net. (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 11 (Sun): Wheaton, IL - Six Meter Club of Chicago. http://cyberconnect.com/orion/smcc.html. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 630-963-4922 or 708-442-4961 . Email: wa9rij@mc.net

Jun 24 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Jun 25 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

JULY 2000

Jul 9 (Sun): Peotone, IL - Kankakee Area Radio Society, http://www.w9az.com. Info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. Tel: 815-939-7548. Email: k9nr@juno.com

Jul 15 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Jul 23 (Sun): Sugar Grove, IL - Fox River Radio League. Waubonsee Community College. http://www.frrl.org/hamfest.html Info: Maurice Schietecatte, W9CEO, 813 Cindy Lane, Sandwich, IL 60548. Tel: 815-786-2860. Email: w9ceo@arrl.net (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2000

Aug 12 (Sat): Quincy, IL - Western Illinois ARC. http://www.qsl.net/w9awe. Info: Jim Funk, N9JF, PO Box 3132, Quincy, IL 62305-3132. Tel: 217-336-4191 . Email:

jfunk@adams.net

Aug 13 (Sun): Peotone, IL - 66th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $4.00 in advance with double stub, $5.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Christine Mack, PO Box 2161, Oak Park, IL 60303. tel. 708-358-1786, email: christine1@mediaone.net. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 19 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Aug 27 (Sun): Danville, IL - Vermilion County ARA. Info: Gary Denison, KA9SKS, 14704 East 2750 North Road, Danville, IL 61834-5610. Tel: 217-759-7389 . Email: gdenison@danville.net

Aug 27 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

SEPTEMBER 2000

Sep 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Sep 16 & 17 (Sat & Sun): Peoria, IL - Peoria Area ARC. http://www.w9uvi.org. Info: Jim Williams, N9HHU, PO Box 3508, Peoria, IL 61612-3508. Tel: 309-692-3378. Email: jimn9hhu@juno.com

Sep 23 & 24 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. http://www.chicagofmclub.org. Info: Mike Brost, WA9FTS, 5127 North Monterey Avenue, Norridge, IL 60706. Tel: 708-457-0966, Email: mbrost@cin.net (the biggest and best hamfest in northern IL - AJ9S)

Sep 24 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

OCTOBER 2000

Oct 14 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Oct 22 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

NOVEMBER 2000

Nov 18 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Nov 26 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

DECEMBER 2000

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

>mode, per your own comments).
>
Then why did you and Coffman come up with your utterly brilliant
concepts of HF cw contesting via digital "simulation" vs. using
existing band space for the existing analog cw mode?
>
>What I HAVE said is that it's time to make room for and stop
>erecting unnecessary barriers to the introduction of new technology.
>
What barriers are currently in place or under consideration which are
preventing the introduction of new technology, Mr. Stevenson??
>
Let's get down to some nits and grits: Pick a band, any band, say
3.5-4.0 Mhz. for discussion purposes. Given your druthers and the
freedom to do so how would you remap that spectrum space to accomodate
both the traditional modes and the room for new technology?
>
>*If* people decide that the new technology is better and decide
>to abandon the use of "the traditional modes" that's fine with me,
>but it will, as far as I am concernced, be a voluntary choice on
>their part(s).
>
That's obviously not up to you but aside from that what's new about
modes being accepted or rejected by the users of ham spectrum space?
At one point measurable NBFM was in use on HF but it didn't suceed in
the market which finally standardized on ssb as a better way to go
than AM. Numerous digital modes are out there right now competing for
users and I expect that eventually one or some will supplant RTTY as
the dominant digital mode. The mode marketing opportunity has always
existed so what's the problem?
>

VHF/UHF is an entirely different topic.
>
>Those comments were intended to stimulate
>thought about adopting new technologies before they are
>forced on us by the FCC, with a possible loss of amateur
>spectrum as another threat.
>
The FCC is not going to mandate any ham modes. It's not a matter of spectral efficiency, it's a matter of utilization and the results of that utilization. If a lack of band occupancy makes it obvious that any underutilized space would better serve the public by being handed off to some other service then so be it and we did it to ourselves. Technological changes won't increase the number of guys using two meters and/or increase the value of ham radio to the public.
>
In fact, a high level of spectral efficiency might bring the FCC to the conclusion that they can compress our space without any loss of our benefit to the public and therefore take the unnesessary space away fron us on that basis.

Nope, that's not incorrect. In addition to being an "HF transceiver"
it is also an MF "transceiver". An IC-706 MKIIG is an "HF transceiver"
even though it also works on MF, VHF, and UHF. "HF transceiver" is
inclusive as opposed to *exclusive*.

I've often wondered about the A-1 Operator's Club---is it another off shoot of some fraternity. How does one get into it---nominated? How... by brown nosing (or !) another A-1 op? I remember back when there was comotion within the ranks regarding that no new A-1 ops were being nominated and it kinda turned into an insiders club. I think that the requirements for the A-1 Op Club should be reduced and issued maybe for 10 contacts with Rag Chewers Club members and maybe endorsements for suceeding groups of contacts.

How about the Woof Hong club/society/secret fraternity? Maybe that ought to be brought into the light as well.

Most people use "theory exam" and "written exam" interchangably.
So you think technical theory will be eliminated from the written
exams and rules, regulations, and safety will still be kept on it?

Since the written exam is an *entrance exam* and not a
graduation certificate, isn't knowing rules, regulations,
and safety all that's required for a beginning ham? When
I got my conditional license in 1952, all I really "knew"
were the rules and regulations. I rote-memorized word
associations and schematics for the technical part. There
were not many questions on safety at all way back then.
Yet I was awarded full operating privileges as a conditional.

You forgot some other "basic classes," one of which is the regular military, who looks down upon the Second Amendment militia as a pitiful collection of ragtag wannabes and posers, dressing up in mock fatigues, pretending an NRA decal is some kind of badge. The dictionary provides a well-established definition:

"Irregular: Not belonging to the established army organization; not forming an organized military body (1856)."

Irregulars. Perfect description.

Now, having traded insults, let's get back to radio. ;)

Jeff

: > years.
:
: Unlikely. But even if it's true, what's your point? So will a lot
: of Techs, Generals, Novices, Advanced, and even people who never
: had a license at all.
:

Ok. Who are the hams we see here in the NGs protesting the reduction
of code requirements? Mostly older hams, with Extra class licenses. These
are the same ones in my local club that fight any and all changes.

Given that the average age of the members of our hobby is 50, time will
solve the problem. Just look how our ranks have decreased over the
last 10 years due to SK's.

This does not mean that many Extra class hams are not technically forward
thinking how see the need to modernize the hobby. But still there are a
number
of folks, especially here in the NGs, that oppose change.

:
: No, I'm really not bitter. I just feel that lowering the bar with respect
: to anything is the first step on a slippery slope. Look at the American
: public School systems.
```

You sound like the bitter old farts in my local ham club. They want
everything to stay the same as it was when they first got into radio.
Sorry life changes. And most of them will be dead in 10 years.

As far as the schools go, look there is a decrease in the number
kids. We went from having 30 million kids turning 18 in the '60s
to only 9 million in '92. The top 10% of 30M is 3M. For a population
of 9M is less than 1 million. We just have fewer kids thus the dumb
ones show up more frequently. If you want the situation to change,
then encourage the rich and the smart to have 11 kids per family
and make the poor get sterilized.

: I have my ticket, I only spend time on the CW bands so it really doesn't
: effect me directly. I'm just trying to get people to think about things,
: and I'm not saying there is a right or wrong answer.

We are not making it easier, we are simplifying. There were too many
license classes and too many exam elements. Now the tests are much
harder (about double the number of questions). It is just that code is not
as necessary as being technically knowledgeable (the knowledge of the
law is even more important).

Look at the German license structure (I am also DA4NWO). Only three
classes. Class C is like our no-code Technican. Class A is a limited
HF license and Class B is full HF. There is only one code exam and
one written test. Class C has to only pass the written test at 50%.
Class A passes the written at 50% plus the code test (10wpm). The
Class B is a 70% pass on the written plus the 10 wpm code test.

Simple but still it tests.

And the German exam is considered harder than the American exams.

It's been this way since I was licensed (a long time ago) and countless hams have
worked DXCC, even honor roll with low power.
When band conditions are good, I have no trouble working Europe, Asia, Africa,
etc. with 100 watts and a beam. Most of the stations I work are using dipoles and
verticals. Of course all this activity is on CW, not phone.

As a confirmed liberal, I found myself nodding while reading your post, Dan. You are correct - the economic policies of any President take some time to manifest themselves.
At the core of the "Clinton problem," as I like to think of it, is a lack of character and priciple. I simply don't like the man. I never have trusted him. The public knowingly voted for him, so apparently trust isn't an issue?
Or could it be...that at age 31, I am becoming a conservative?
Didn't P.J. O'Rourke say something along the lines of, "Anyone younger than thirty who is a conservative...is heartless; Anyone older than thirty who is a liberal...is brainless." ?

73s, Dan, and cheers on a well - thought - out bit of writing...

Kissenger used to play good-cop/bad-cop with the North Vietnamese in
regards to them not abiding by some concession, saying something like,
"My boss, Mr. Nixon, has discussed using a nuclear device on Hanoi..."

There are other methods in place of air power in achieving a desired goal.

Here here! AF2Y is absolutely right. I always thought of ham radio as being sorta like the freemasons (only woman can join, thank goodness!) -- age, sex, race, class, size, country of origin, color of skin, sexual preference and so on didn't matter one whit. All that should matter is a love of radio -- and lord knows there's enough to do in ham radio so that all can be satisfied! C'mon, people, like AF2Y said, wise up!

I'm a "member" of the A-1 Operator's Club but the club doesn't do anything except see to that you are sent a certificate of memership. Oh, yeah, that and 50 cents gets you a cup o' joe at your neighborhood McD's (if you can call their "coffee" "coffee"!). I was nominated back in 1978 by a member in the section I was then living in, Northern Virginia, and by a by a second fellow some six years later. In turn, I have nominated a number of people myself, but with one exception, I don't know whether or not they are members. There is no club, of course, but the "club" supports good operating -- whether on CW, sideband some other mode -- which includes being considerate, forming code clearly and cleanly (NOT speed!) and in general being an all around nice guy. But the only benefit of the "club" is being a member, that's all. Hey, you don't know if you've got a nomination on file and are just waiting for that second one!

> How about the Woof Hong club/society/secret fraternity? Maybe that
> ought to be brought into the light as well.

Aw, that's silly -- I mean, I joined the "Royal Order of the Wouff Hong" in 1966, at the tender age of 16, while at a division convention in Tarreytown, New York. It's really just a joke, at least the "secret handshake" and what-not are. If there is anything serious about it, I sure don't know!

Now, I would be curious about the Rettysnitch and whether there is a secret organization around it -- something like the "Knights of the Templar Rettysnitch" or some such organization! *That* strikes me as ominous (!).

73,

Joe, W2RBA

I work all over with 100 watts and wires or veticals, even netting rare stations during the week at lunch.

The problem starts when the weekend warriors arrive and cause pileups on British or French stations (for example) that call CQ until they're blue during the weekdays.

And it's not just the increased numbers... if everyone ran 100 watts or less (into any kind of antenna- I'm not for regulating antennas as that sort of "experimentation" is part of ham radio), everyone could work more.

Instead there are the residual contesters about, with the overkill stations.

If you have a TH-7, you don't need to switch on your amp... unless you're another one of these "I want it now" people. In that case, you probably will be going for a welfare license too.

As in an arms race, someone has to take a step back.

I have one. And in its ideal form the "club" is an OK idea, and should
work as you say.

But since its resurrection, as I 've said (and at least in the East) it
has become a who's who of ARRL employees, ARRL "position" holders,
contesters who know them, and contesters who are ARRL people.

If ARRL and FCC can claim 13 and 20 don't make good operators, neither
does ARRL membership. Yet how many A-1 ops are not affiliated in one way
or another ?

> economic policy shift takes several years to manifest itself to the common
> man. All Clinton did was take credit for the conditions he inherited.

They may have contributed but it was Bush and, mostly, Clinton who were the guys held responsible for the "boom" we're in. You know, it's really interesting: you conservatives hold Carter responsible for the lousy state of the economy which he inherited from Nixon/Ford yet you deny Clinton's responsibility for the good things that have come along. Figures.

> Nothing the government runs is either cost effective or productive.

Um, have you noticed that the "government" does the things that would otherwise not be done by private enterprise? What's your metric for determing whether or not they are effective or productive?

73,

Joe, W2RBA

:>just sit here idle as you do a great injustice to the hobby.
:>
:>Do you even realize what you just did??? You tried to get that
:>person to side with your cause and in the process of it trying to
:>get him to think that we hate and maybe envy him. Thats wrong your
:>wrong and you should be ashamed of how you approached it.

: I have no cause. I just commended him for his hard work and I hope he doesn't listen to
the
: hatred for his hard work. If you don't agree, well, I guess that's your problem, not his
mine or
: anyone else's. Too bad you can't commend him also.
: Dale
: KC8FAQ/20

Dale, If you have no cause then why tell him that all of us who will
be getting a license after the 15th of April was going to repress and
hate him because he passed his code. We're not the ones whining, its
the people who have the 20wpm who are complaining, or have you not
noticed? We're the ones being attacked. He should have no reason to
receive hatred for his hard work. I'm glad he got it out of the way
believe me if I could I would do it too, I took the test 3 times and I
have not passed it yet. If I could take it I would right now, not because
I want to call myself a pre-April ham either, but because I'm just so
ready to get in on the action, I like contests, and I enjoy ragging to
but if I could of passed it I would of by now. Its not happening for me
so I'm left with the April 15th change then I can start breathing new
life into the hobby for me thats been basicly dead and boring for the past
7 years.

I did commend him, you just looked over it, and I'm commending him in
this followup as well. I hold nothing against those who have passed
their 20wpm past or present, Pre-Aprilist. I commend you for being able
to accomplish something I could not because of choice, but because of
ability. I missed the guy's handle and callsign but if he does happen
to read this I'm am glad for him and I hope he's enjoying his new areas
of operation.

Now here is something interesting, I ask you to commend me when I pass
my General Written and Extra Written Post 15-April. How about it Dale?
Are you going to commend me when I past my new tests???? Or are you
going to just harbor the hatred you hold towards the Post Aprilists?

Jimmy, KB5FSV

Burn her, she's a witch! And how do you know she is a witch?
She turned me into a newt! Ahhhh newt? I got better.......

Source record: 121326

Bodu, I don't know, I'm not speaking for everyone else, I'm only speaking for myself. I have no shame in not being able to pass a test I have attempted in the past. After the first 2 times I gave up on studying because I just couldn't get it. I tried it a third time again just the other night and once again didn't get either the questionaire or the straight minute of code. I tried damn it, I did but I just can't do it. I have no shame, I tried, and if I'm going to be branded a Post-Aprilist then so be it, I'm not going to hide that fact, and if you want to QSO with me then great, if its a problem for you then either move off freq or I'll move off freq but I'm not going to need that 13/20wpm hump under my belt to make me feel like a complete ham. I've done my bit for this hobby already for 12+ years and thats what makes me proud, I've performed in emergency, in contests I've elmered, I've helped people when help was needed and I promoted the hobby through public precence. I can't pass the 13/20wpm code, so what, BIG DEAL. Its just a thing, nothing more, I'm no better or worse than you or any other ham out there.

I never said the people who have passed the code are ones with egos, if thats the impression you got from my post, sorry, its not intended and that is not what I was implying. I think its great that people have the code under their belts. They should be proud that they accomplished it and should hold honor in their hearts that they were the pace setters, but now we're moving into a new era and a way, and the people who have 13/20wpm should now prove themselves not to be bastards of the hobby but be the Hams of old and embrace the Hams of new and help continue to build up the hobby so that we may be strong again.

I just feel sorry for someone who is afraid to go into ham radio post aprilist because of persecution. I don't think its going to be that big of a deal on-air. There sure have been a lot of attacks here on the newsgroups and hopfully thats where most of it is going to stay on the groups and not on the air. But even if they are on the air, I'll just let it one ear out the other and move on in life still enjoying the hobby, still promoting it, still evolving with it. All I ask is that the FCC don't take away our privilages and then I'll be ok. They have made a huge morale booster for me recently so thats why there is no way I see fault in this move, it feels good, I feel alive again and I'm all excited, even planning to put an HF mobile in the truck, and thats something I've never considered before. I'm giddy over it but I refuse to have an ego trip or panic attack over the oncoming battle between the pre and post aprilists. :)

You know something? If you hate so much about amateur radio...why
don't you just get out of it? And another thing moron....I contest, I
use 100 watts and a dipole. Check QST for my results. So much for
your "theory". The most power I can use is 700 watts output..TO A
DIPOLE. I do just fine, thank you.

Wow, this ABuzecky guy, unlike many White Americans who believe the lies about race that endlessly spew forth from their Jew-controlled TV programs, really understands the TRUTH about race in these dying days of America.

Apparently, speaking the TRUTH about racial matters makes one a racist. Go figure!

But then again, I guess telling the truth is considered old-fashioned and mean-spirited these days in the land of Clintonia.

Boy I'm really glad you brought this to light...Its so unfair to have any organizations or awards that take effort to achieve. The ARRL should include with their membership card the following

DXCC certificate
WAS certificate
A-1 op certificate
Rag Chewers Award

the list goes on and on. They all take too much effort...and there are so many people who feel bad cause they don't have these yet..surely its cause the requirements are too tuff.

Just a thought

Yes, I agree that Demi Moore as G.I. Jane, and we go out
target shooting together, would be really great!!
Heck, she could even join my partner and I.

(if you look at my ham station in the QRZ link below, you'll
see why this makes sense!) ..

Of course I'm outing myself to the public-at-large
regarding my preferences in relationships..

But... what the heck... It's fun being honest
about what one likes :-)

Also, I'm NOT available.. Am in a solid relationship
for the past 14 years and she is listed as my domestic
partner with my employer, so she gets the appropriate
benefits..

Ditto...I use a new Radio Shack HTX-10 and have a blast with my 25 watts and a Wilson 100 mag mount, mobile. I have talked, literally, all over the world with it. The radio's "christening" weekend was the most recent contest in, I think, November.

Yeah, if someone's that frustrated with the hobby, it's their choice to keep beating themselves up over it or go find something else to do.

I have a square loop of bare copper 18 gauge wire.

Thru the use of a grid dip meter, I have determined that the loop is resonant at 145.710 Mhz.

If I run this wire thru PVC tubing of approx. 3/4 inch inside diameter, will the resonant freq of the loop rise, or will the resonant freq decrease?

Would the change be a tiny change.....such as now resonant at 146.000 Mhz.....or would the change in resonant freq be much more.....such as a change of several Mhz??

Thank you.....KA0FPJ

At a recent trade show 'inside the beltway' catering to
the so-called 'clandestine security industry', Ramsey was
selling lowpower audio and video equipment which operated
on amateur frequencies, and the target market was NOT hams.

When asked about it, the Ramsey booth personnel responded.
"Keep your nose out of it. Nobody cares what frequency it's
on." Looks like there a lot of "sheep" reading 2600 too.

2351. PARG 2000/2000 Project: Update on repeater linking & access.

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-16 00:00:00 UTC
From: Innocent John!! <jmackey@NOpargSPAM.org>
Message-ID: <uLqg4.1177$_G1.21868@news1.sttls1.wa.home.com>
Source record: 121394
Cross-posted to: alt.radio.parg,rec.radio.amateur.misc

Current status of the PARG 2000/2000 project.
(Linking 2000 miles in the year 2000)

This week the Oregon Division & the Mid-west Division of PARG have been conducting extensive testing of repeater linking & repeater access between the two divisions. As all should be aware, the repeaters are seperated by roughly 2000 miles.

This last week KS0F has been in Oregon & regularly able to access a PARG Mid-West Division repeater via the INTERNET PORT (Port 2) of the repeater. The repeater operates on 443.575 MHz (Port 1) under the call of KS0F. Multiple
contacts have been made on nearly a daily basis. The only problem at this time
appears to be packet loss in the Internet Telephony end of the connection. Usually
Microsoft Netmeeting & occasionally Vocaltec I-Phone are used for this connection.

For several days of the last week the 147.435 MHz repeater in Portland has been
occasionally linked with the 147.435 MHz repeater in the Midwest Division via 10
meter FM. This connection has been sporadic as band conditions permit. On January 12th KS0F & K0NH conducted a lengthy contact on the two individual 147.435 repeaters when they were linked at roughly 1 PM Pacific time via the 10
meter FM link.

These innovative high-technology plans & actions by the PARG Repeater & Techincal Committees under the joint guidence of the PARG Oregon & Mid-west Divisions are very cutting edge in the communications world and in the amateur radio
world. Such activities make us PROUD to be PARG MEMBERS!!!

Further questions should be sent to the PARG Public Information Officer (PIO) at
PIO@PARG.ORG

I share Scott's approach. As said elsewhere on this group, I passed the Novice exam for the third time in my life yesterday, drawn back to ham radio now that my difficulty with 13 wpm is soon irrelevant. I'm an attorney, and just have a tech interest that lately has been well-served with computers. So, the reduced code requirement will bring in some quality along with the rabble (we all can agree that a PhD is good for the art, but a lawyer is debatable).

It was just an illustration of one technique which could be used to
support 20 million simultaneous users on the amateur HF bands
while maintaining a familiar operator interface for those accustomed
to using 20 WPM Morse (though of course a Morse user interface
isn't essential to the technique).

We haven't begun to fully exploit what we can do with modulations
and codings on the amateur bands. We could support a much larger
number of users while maintaining a familiar user interface if we
chose to do so. Or we could have much larger throughputs with a
somewhat smaller number of users if that's what we desired to
do.

Neither Carl nor I were pushing this as *the* way we should all be
operating. It was simply an illustration of one way that we could
operate successfully with a much much higher user occupancy
of our spectrum. There are many other techniques, or mixes of
techniques, which could be used instead.

From my viewpoint as an experimenter, I wouldn't like to see us
confine ourselves to any single coding technique, or any small
set of coding techniques. Having people experimenting with a
large variety of techniques is more in character with our service.

>>What I HAVE said is that it's time to make room for and stop
>>erecting unnecessary barriers to the introduction of new technology.
>>
>What barriers are currently in place or under consideration which are
>preventing the introduction of new technology, Mr. Stevenson??

The 300 baud speed limit, and the 1 kHz occupied spectrum limit
are two. Another is the requirement to use one of only three ISO
alphabetic codings for message text. Those barriers are very

limiting with respect to implementing a number of techniques
which exploit the Shannon relation in non-traditional ways.

>Let's get down to some nits and grits: Pick a band, any band, say
>3.5-4.0 Mhz. for discussion purposes. Given your druthers and the
>freedom to do so how would you remap that spectrum space to accomodate
>both the traditional modes and the room for new technology?

Ideally, fully mixed usages would be permitted, but I realize that isn't
a practical solution for some legacy modes. So I'd like to see the top
and bottom 50 kHz of the band be set aside for non-traditional modes,
and let the rest of the band be divided up any way traditional users might
like. (I want use of both ends so some diversity modes can be exploited
that can't be done in a single small segment.) Importantly, I'd like this to
be handled by gentlemen's agreements, not cast in stone by regulations.
I'm deliberately patterning this roughly after the SSB/AM partitioning that
was used in the 50s and early 60s on this band.

>>*If* people decide that the new technology is better and decide
>>to abandon the use of "the traditional modes" that's fine with me,

>than AM. Numerous digital modes are out there right now competing for
>users and I expect that eventually one or some will supplant RTTY as
>the dominant digital mode. The mode marketing opportunity has always
>existed so what's the problem?

RTTY has already been displaced from the top spot, but there are a
number of other techniques that current regulations and band plans
don't permit to be used at all. The market can't fairly decide when
regulatory fiat doesn't allow the modes into the marketplace.

Actually it's the net regulars that get in the way of my contesting. I guess it's a matter of perspective.

> Sure, duirng the week you can work Europe with 5 watts on CW, but notno
> the weekends when most hobbyists are available.

This is absolute rubbish and I'll be glad to prove it to you ANY weekend (providing propagation that is)

> Some weekends, you can't work DX with 100 watts due to the splatter from
> the big guns.

More rubbish, additionally contesters avoid the WARC bands, if 20 is open most likely 17 is too. Since we've decided NOT to use that band is it unreasonable that you move there duing a contest?

> It's an arms race. Almost everyone with an amp uses it.

2365. Liberty Net mentioned in the SPOTLIGHT!

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-16 00:00:00 UTC
From: Lloyd Davies <n0vfp@bellsouth.net>
Message-ID: <Lcvg4.9025$8z5.113475@news4.mia>
Source record: 121408
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

The Censors March On

This edition of The SPOTLIGHT will be the very first one thousands of you will have seen. A substantial number of you will have Internet access and will visit our website, also for the first time.

But some of you will be filtered out or "blocked" from our site by censoring software which is always promoted as a means to protect children from sexual pornography. No one can argue with that objective. However, a filter as a means of blocking access to sites"any sites"is a form of censorship which is already being abused. Some of these filters do not block all pornographic sites as advertised, but do block sites that an unelected elite considers politically or culturally incorrect.

This often includes The SPOTLIGHT site which is a reflection of the populist philosophy of this newspaper and its publisher, Liberty Lobby. SurfWatch software censors The SPOTLIGHT under their category "Violence/Hate." Do you find any violent or hate spewing articles here in The SPOTLIGHT? I-Gear, a software al ready in use by many government, school, library and corporate entities, also censors our site. Another filter, WebSENSE, labels us "Politics" but it is unclear if we are censored by them. Can you imagine filtering every site that can be labeled "Politics?" CyberPatrol, another software censor, claims we are not on their "CyberNot" list at this time.

The fact is that police agencies of most countries know precisely where pornography is generated on the Internet but they do not crack down on it. This raises a question of the true motives of the media barrage against pornography on the Internet. The fall of the Soviet Union has often been attributed to information spread over a fax network that the government could not prevent. Internet information is hundreds of times faster and more prolific as homes all over the world come "on line." A necessity and reason for censorship must exist if undesirable truths are to be eliminated from the Internet by the powerful elitists who want absolute control of all means of communication. Therefore they are using the guise of "fighting obscenity on the Internet" as a clever cover by which to launch censorship of dissident political views and opinions on the Internet that threaten the power and control of that establishment elite.

Although parents and others are being encouraged to use censoring software at home, filtering software is being promoted for use and mandated by local laws on public computers in libraries and schools all the time. In fact, George W. Bush, in a recent presidential debate, said he is an advocate of using filtering software in schools and public libraries. If he becomes the

next president, will he propose any institution of learning that receives public funding employ some type of censoring software or risk losing money?

It is also becoming a sales gimmick to ?bundle? censoring filters on new computers as one of many ?free? software programs in the package. The SPOTLIGHT is interested in spreading truth, not censoring it. We ask our readers to cooperate with us to keep truth alive on the Internet. What you can do is write or e-mail us anytime you find our site, or similar sites, blocked. Give us the details, including the software used if you can determine its manufacture.

Until the advent of the Internet, amateur ham radio was virtually the only free and independent means for large numbers of people to communicate and to trade ideas and opinions without censorship. Now, some powerful special interest groups are using their high-level political clout (not to mention their influence among some ham radio operators) to attempt to censor and jam ham radio just as these same interest groups are also trying to censor the Internet.

One of the most popular ham radio forums over the past 30 years has been the Liberty Net, which originally started out as a group of radio operators who all happened to be supporters of Liberty Lobby, the populist Institution in Washington, D.C., that publishes The SPOTLIGHT. In fact, the Liberty Net actually preceded the launching of The SPOTLIGHT in 1975.

In recent years the Liberty Net has been targeted by the high-level censors and now even the Federal Communications Commission (perhaps influenced by the special interests) has been siding with those who are trying to disrupt free and independent discussion on ham radio.
These remarkable developments were described on the July 18, 1999, broadcast of The SPOTLIGHT?s weekly radio talk forum, Radio Free America with host Tom Valentine.

The guest was Bill Lauderback, a veteran ham radio operator who is also widely known as the inventor of the ?tiny tenna? that many short-wave radio listeners utilize to increase the power and reception for their short-wave radios. (For more on the ?tiny tenna? and other products of interest to ham radio and short wave radio, write: Catalogue, P.O. Box 66, Hanover, Mich. 49241.)

The story you are about to tell us is very interesting because it tells a lot about the nature of the politics in this country and how special interest groups are trying to suppress freedom of speech in all of the independent venues of communication, such as ham radio (as well as the Internet).

I wasn?t really a participant in the Liberty Net per se. There were a couple other nets on 3.950 megahertz that I participated in during the week. But generally on Saturday nights I would listen for a short while and then turn in.

What has come down the pike is a problem that started seven years ago with a gentleman out of Evansville, Ind. This guy is David O. Castle. He took it upon himself seven years ago to enlist some help in trying to purposely jam and maliciously interfere with the Liberty Net which was on the 3.950 lower sideband.

That channel at 3.950 was the channel that ham radio operators talked on to other ham radio operators all over the world.
Most people who have shortwave radios are capable of picking this up. So people can listen in to the Liberty Net.

Now the Liberty Net was actually founded as a result of the work of Liberty Lobby, the publisher of The SPOTLIGHT and the sponsor of my program.

Yes. Approximately 30 years ago a group of amateur radio operators found that they had a common bond. They were all members of Liberty Lobby. So they gathered up on the 75 meter band, which is what you call the frequency range between 3.5 and 4 MHz, the amateur radio section that the Federal Communication Commission (FCC) has granted to ham radio operators to talk on, and they decided to put together a discussion group which "met" once a week over the air.

Over the years this group grew and grew and incorporated people from all over the political spectrum. There were people from the hard left and from the hard right and a lot of people in be tween. They would banter back and forth talking about current events.

However, as I noted, there was a man named David O. Castle of Evansville, Ind., who decided that he didn't like the political speech that was going on and he decided to take it upon himself, along with others, to harass and to otherwise jam the discussions on the Liberty Net every Saturday night. They were getting away with it. However we filed complaint after complaint after complaint with the FCC until it reached the point where just about every communication on that frequency was being disrupted.

I used to have regular evening conversations with Harvey Heinz and we used to get in there and chat around 7 p.m. every evening. Mr. Castle would come in and berate me and my business and would try and jam and interfere with my conversations.

I got nowhere with the FCC. I contacted my attorney and we sent Mr. Castle a letter, mainly in hopes of putting him on notice, but also in hopes of getting the FCC to do something about it. We sent copies to the FCC and to the American Radio Relay League, which is kind of like a lobby organization for amateur radio. This had absolutely no effect whatsoever. I took a tape recording down and my attorney heard the jamming and the obscenities. So we had this continuing interference problem to the point that Castle was recruiting people from other radio frequencies to come over on Saturday night and there were times when the Liberty Net just couldn't function. When the moderator, Vic Misek, tried to move the conversations to another frequency, these people would follow and jam there. It was an orchestrated effort, and a well-orchestrated effort, and it seemed there was no relief in sight.

However, about a year ago the FCC finally announced that they were going to have somebody come in to enforce the amateur radio bands. We were happy. The gentleman appointed was W. Riley Hollingsworth and he is an attorney and also a ham radio operator. We gave him the benefit of the doubt and figured that he would make a sincere effort.

Sure enough, one of the frequencies he decided to clean up was 3.950 MHz, the Liberty Net frequency. We saw Mr. Castle approached by Mr. Hollings worth. There was an investigation and Castle was given a two-year suspension from the short-wave spectrum. He was permitted to go up on the shorter distance UHF and VHF frequencies, but he was ordered to stay off the short-wave spectrum.

That was the federal government ordering Castle to cease and desist.

Yes. However, during the second week of July 1999, that whole thing was reversed all of a sudden and the FCC went after Vic Misek, the moderator of the net control station of the Liberty Net, and instead falsely accused Misek of jamming. According to Hollingsworth, it was "retaliatory jamming." He also made some accusations that I frankly didn't understand, one of which was that Misek was "broadcasting" [as though he were a commercial station]. Nothing could be further from the truth. This was just an on-air conversation between ham operators amongst themselves.

But to justify that this was "broadcasting," Hollingsworth of the FCC said that Misek had a web site set up to advertise this to short-wave listeners. In fact, there was no such web site. So the FCC was grasping at straws to make Vic Misek out to be the bad guy when, in fact, he has been the victim for seven years of this onslaught. Vic is a real gentleman on the air and has been a valuable asset to the ham radio community over the years.

Who is this guy Castle who has been causing these problems? Has anyone confronted him?

Yes. I've spoken to him and he's a very unreasonable man. I even spoke to his lovely wife on the telephone but she was oblivious to everything and she just said: "Oh, he's just having fun." However, now the FCC has given him a free ride.

The sort of things that Castle is doing is similar to people who try to disrupt Internet chat rooms and news groups.

In fact, just recently on ham radio operators' news group, someone who doesn't like you or The SPOTLIGHT got up and posted a message saying he hoped that the FBI would shoot you, Tom Valentine, before you ever got to your microphone. The guy's name is Doc and his call letters are AF2Y. I believe his last name is Schwartzbarr. He's a strong supporter of the Anti-Defamation League (ADL). [The ADL is one of the leading groups promoting censorship of the Internet."Ed.]
He's one of the people, by the way, who was encouraging David Castle to jam the Liberty Net. When Castle first got his suspension, he got on one of the radio frequencies where "Doc" hangs out and said, "If I go down, I'm going to take a bunch of you down with me because you guys helped to coax me into

doing this.&#65533;

These people are trying to stop any kind of intelligent discourse, whether it is on ham radio or whether it&#65533;s over the Internet chat rooms and news groups.

On the Internet they do what is called &#65533;spamming,&#65533; that is, putting up numerous nonsense messages or they try to change the topics of discussion.

At least on ham radio there is a voice you can identify.

What you are trying to express will get out on the Internet, but on ham radio, if you&#65533;ve got several powerful stations grouped together, they can jam the discussion as they&#65533;ve done on the Liberty Net.

One of the things they have tried to do, Mr. Castle, in particular, is to go on the air prior to the Liberty Net discussion and to grab the frequency. Some of these guys on the West Coast would get on at five o&#65533;clock in the afternoon and say that they had the frequency and that the Liberty Net couldn&#65533;t go on. On the night of May 1, 1999, Mr. Castle got on and couldn&#65533;t raise up any of his cohorts to join him, so he literally broadcast, speaking a monologue, which is against FCC rules, for a good 50 minutes. Finally, some people from the Liberty Net came up and started into their conversation while Mr. Castle went on in the background in his monologue, talking to absolutely no one.

About 10 minutes prior to when the Liberty Net discussion was supposed to begin at 10 pm, some of Castle&#65533;s cohorts came on and pretended that they had the frequency and that the Liberty Net people had come in and taken it from them. In the meantime, on the alternate frequency at two and half kilohertz down, another anti-Liberty Net was trying to block that one so that the Liberty Net couldn&#65533;t move there. It was a strategic, well-planned orchestration to stop the Liberty Net from taking place that night.

You mentioned the ADL, which has been in the forefront of trying to silence The SPOTLIGHT and all other dissident voices in America. It is an illegally unregistered lobby for a foreign nation. Now here&#65533;s Bob calling from Virginia:

Bob: This guy Castle has personally threatened me. In fact, we had a meeting of about 50 people in Evansville in 1995 and I met Castle in person there. He figured out a way to get in where we were meeting.

When my show wasn&#65533;t even 11 weeks old back in 1988, I was out in my yard at my home in Iowa chopping down weeds and there was a guy across the street taking pictures of me. I found out that it was Daniel Levitas. He has been affiliated with the ADL and the Southern Poverty Law Center of Morris Dees. He came all the way to Iowa City from Des Moines to spy on me because I was broadcasting this radio program.

Bob: That&#65533;s remarkable, but not surprising. This guy &#65533;Doc&#65533; mentioned earlier has gone on record on the ham radio operator&#65533;s news group on the

Internet boasting that the FCC is going to take the Liberty Net off the air.

That's illustrative of the power of the ADL.

Bob: I've become unpopular with some Liberty Net people by telling them that, in my opinion, they won't get any justice out of the FCC. I believe that the FCC is operating on a directive from the ADL and/or some of these higher-ups in government who want to shut down the Liberty Net or curtail it.

Here's Tim calling from Las Vegas.

Tim: The Liberty Net is listed on the Internet as a "hate group" alongside the National Alliance and the Ku Klux Klan.
I've seen those postings on the Internet. There are even some Christian churches that his postings accuse of being "hate groups."

The people like the ADL who can't stand the facts have to call names and try to censor people, whether its on ham radio or on the Internet.

2366. A Good Source on Antenna Design?

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-16 00:00:00 UTC

Yes, what's a good book or reference on antenna design? I'd particularly like to know more about
waveguides, helical, parabolic, yagi and other designs. I'd also like to know how one designs an
antenna to receive at a given frequency?

Insurance fraud
> is a crime, not that you would go to that extreme.

E-Bay?? Please. a bunch of crap that somehow gets bid up by the owner
in an attempt to make it look like there's interest. I suppose you are
proficient at that sort of thing. Normally I take it to a local
hamfest.

And what insurance fraud numbnutz?? I didn't file an insurance claim,
so there can't be any insurance fraud. I listed the damage as a direct
result of the vandalism done to my property in the amount in excess of
$3500 (the current replacement cost
of a 940, now a 950), which makes it a much more bad thing than just
cutting up $20 worth of coax. The "gentleman" who did the damage made
the restitution in part of plea bargain (seems he's not been a ggod boy
in the past). The 940 is now part of a working ham shack at the local
scout camp.

>
> And the retraction of the NCI slander and lies comes when?

NEVER. The weren't slanders and weren't lies based on the evidence
provided by the "gentleman" Whether or not he lied or produced
erroneous evidence to support my claims, well, water under the dam. Be
happy to produce everything and continue the legal process. All one
has to do is have the other party agree to it. I am sure a double dog
dare will do. But what's the beef? You and he are convinced nothing
incriminating exists. The decision is his. Personally I could care
less. I got a brand spanking new HF tranceiver out of the whole thing
and it works as advertised, although I am thinking about one of those
new fangled computer controlled rigs.

Thanks for playing Pinky. I hear Lennie the Brain is calling, best you

The following "A-1 Operators" stations were heard operating a North American contest in the DX Windows listed:

(Times listed are representative)

1835.3 W4AN 0227 16 Jan
1838.0 K3MM 0259 16 Jan
3791.0 W9RE 0216 16 Jan
1835.3 W4AN 0257 16 Jan
1839.0 N2FF 0330 16 Jan (Hudson Division Director)

The facts speak for themselves.

Note that N2FF, an ARRL DIRECTOR, can't even follow his own band plan.

The true A-1 Ops are those who know they are courteous, obey the Gentlemen's Agreements, and don't run their ham stations like commercial traffic stations, relying only on quantity derived from automation and voice recorders.

I notice for all the gas coming from a collection of assorted gas bags, those Pork Butt suckboys were pumping out about making 14275 their new base of hate and operation. Guess what? They were all back on 14313 qrming away today.

It looks like they can't stand each other (I don't blame them) and they miss the stink pot they were stirring up on their old qrming freq.

So much for that group of social misfits, they are all back at the same old location , 14275 was open all day long. 14313 was a madhouse as usual. Maybe AF2Y getting back on this forum was the pipers song leading them back to Their old ways.

Make up your mind "Suckboys"

As usual, your standard sucker bet. OF COURSE there'll be
written exams. Only unlike today when they ostensibly have
technical content, but no one is required to actually know
any of it to pass, the technical questions won't even be
present. Might be a good thing- all those newbies won't have
to kid themselves that they actually pased a technical test.
As with Kim, some now realize it. Many seemingly do not.

Eight years of Clinton, and we're looking at the lowest unemployment
figures in modern times. Structurally, we've got an economy that's far
stronger than anything "Reagonomics" ever created. Real wages are going up for
the first
time since 1973. (Put another way, real wages were going down during the whole
so-called boom of the 80's.) American productivity is the envy of the world.
The Fed is worried that working people might be making too much money!
Violent crime rates continue their gradual decline.
Welfare roles are shrinking.
Verdict on eight years of Clinton is obvious; he's effective.

So, looking at the "bread-and-butter" issues in 1996 (and 2000),
it's obvious why we elected Clinton. We like success.
Dole was a spokesman for the old failed ways.
The American public is not dumb at all.

> stronger than anything "Reagonomics" ever created.

Our economy is the direct result of "Reagonomics". The effect of any major economic policy shift takes several years to manifest itself to the common man. All Clinton did was take credit for the conditions he inherited.

>Real wages are going up for the first time since 1973. (Put another way,
real >wages were going down during the whole so-called boom of the 80's.)

Again, the cause and effect of "Reagonomics", private enterprise in the TelCom and computer technologies,and the fact that Congress has kept Clinton from doing any real harm, like Socialized medicine, etc. The current danger lies in the fact that those in the White House stay up nights trying to figure out how they can control, regulate, and tax these new found sources of private wealth.

>American productivity is the envy of the world.

Again because of the private sector innovation. Nothing the government runs is either cost effective or productive.

> The Fed is worried that working people might be making too much money!

You would worry too if you knew that you could not back the currency you print with anything of real value. The country was taken off the gold standard by the Government to make it easy for them to manipulate the value of paper money to hide their deficit spending. But it's a "house of cards" and if they lose control the scheme will be exposed with drastic results.

> Violent crime rates continue their gradual decline.

Which proves the Clinton gun grabbers have a hidden agenda. The violent crime rate is declining because the current generation of criminals are growing older - out of the target age group for violent crime. However, the next generation is just now coming into this target age group (18 - 35). With the past 8 years of liberal BS in the court system, the after effects will begin to be felt in the coming years.

> Welfare roles are shrinking.

Because many states took it upon themselves to reduce or eliminate their welfare programs. You can thank the conservative Congress for that one - in

spite of all the roadblocks Clinton tried to put in place to stop them.

> Verdict on eight years of Clinton is obvious; he's effective.

Sure, he's an effective lier, he's effective in taking credit for other's work, he's effective in diverting the public's attention from his criminal actions, he's effective in causing major damage to our military, he's effective in making the Office of the President a joke to the rest of the world, etc. How much more of this "effectiveness" can the country take ?

> So, looking at the "bread-and-butter" issues in 1996 (and 2000),
> it's obvious why we elected Clinton. We like success.

Who doesn't ? It's just unfortunate that many were hoodwinked into thinking Clinton was responsible for any of it.

> Dole was a spokesman for the old failed ways.

Sure, he represented those old failed values like honesty, integrety, respect for his country, the people, the military, and the office of the President.

> The American public is not dumb at all.

Not dumb, just misinformed. The majority just receive their daily programming via the media and takes it as Gospel. They have lost the desire and/or ability to analyze and differentiate between truth and "Spin".

Hey, no problem Lloyd. The only reason we all pick on you is because you always have tried to impose your beliefs on ALL others. Quit that and some people will learn to like you. As far as BARF is concerned, how many members do you have?

Others are right, disband or re-write your other web links too, to show that you are a REALLY changed person. When people see that, they will believe you and accept you.

>73, Cecil, W6RCA http://www.mindspring.com/~w6rca

Then my FT-840 is incorrectly called an "HF transceiver" because it works on the 160 band.

Do you go to restaurants and pick the mosquito shit out of the pepper before you use it as well?

Guess CB radio is toast. With the new ham rules coming up soon, most of the CBers will be migrating to the other high frequency bands. Only ones that will be left will be the truckers. Possibly it might become a fun place to operate again.

Modern air power is brutally effective against a conventional military
opponent. The proof is Desert Storm. The Iraqis were beaten before
the first Coalition tank crossed the start line. But air power is of little
value against a guerrilla insurgency. The US dropped more tons of
bombs on Vietnam than were dropped in all of WWII, Korea, and
Desert Storm, but they weren't a decisive factor in the conflict. The
Soviets learned a similar lesson in Afghanistan. Powerful conventional
forces are of little use when the enemy won't cooperate by giving
you high value targets to hit.

It is also by no means clear that if a rebellion were to occur in the
US that military units would remain loyal to the central government.
The Civil War gives us a counterexample. West Point graduates
led both sides. Many changed their blue for gray. In some cases
brother literally faced brother across the lines.

Insurgencies aren't primarily about firepower, they are about will.
The side to lose heart first loses the conflict, no matter what
advantages it may or may not have in terms of conventional forces.

No way. CB'ers are CB'ers. If they were going to get a license at all, they would have at least gotten a no-code tech. If they didn't want to put forth the effort for that, what makes you think they will all of a sudden decide to put out more effort to learn CW and take a more difficult written test ?

If the day ever comes that they can get a license with no effort at all, maybe it will happen. But until then they will, for the most part, remain on the chicken band.

Yes, those dirty business people. All they want is money! Funny how
Radio Shack started the Family Radio Service. Just think what would
have happened had RS gone after 80/40/20 mtrs.

Speaking of the old days--when is the last time anyone bothered to FIX a TV. They all end up in the landfill, and you know the *greenies* hate that. Where is a TV repairman when you need one?

As soon as you credit Jimmy Carter's Administration
and policies for the entire boom of the 80's, under your
bizarre "economic lag" theory,
then I'll gladly allow Reagan/Bush to take
credit for the boom of the 90's. You can't have it both
ways. If you are like 99% of all so-called
Conservatives, you were trumpeting the success of
Reagonomics during said 1980's. I repeat, you can't
have it both ways.

Fact is, there's nothing except your wishful thinking
to back up the idea that economic conditions can "lag"
major policy changes by as much as eight years.
Money supply changes, tax changes, energy price
spikes (that's what hurt Carter), all have relatively
immediate consequences.

The voters looked at conditions and decided to credit
Clinton's administration for them.

My point stands. The American public is not stupid,
and a great deal less deluded than your typical gun-nut.

2405. Poor Mistreated Strom

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-16 00:00:00 UTC
From: mwbryant@aol.com
Message-ID: <20000116064236.01108.00000183@ng-cl1.aol.com>
Source record: 121479

Open response to Peter Maus:

1. I am delighted to see we agree that the holocaust was real and that it is silly to blame Jews for media problems.

2. I disagree that Strom should not be held to task for posting holocaust denial links. To argue that he doesn't support them 100% is a laughably weak argument. We choose what links we hang. Strom brags about his own writings, which support the evil ideologies he provides links to. Peter, do you think Strom does not support 100% of his own writings?

3. I am not attempting to censor Strom. I oppose removal of his webpage, even though I do believe he should be held accountable for his own writings, at a minimum. I am urging EVERYONE to go and read Strom's page and make their own assessments. Make sure to check out his FEMINE BEAUTY links and make up your own mind.

4. Maus argues that I am "harrassing" Strom. First, after 40 years in the media, Peter, you didn't learn how to spell harrassment. It only has one R. Second, I'm wondering why you choose to keep closing your eyes to the harassment coming from the Nazis? You pretend you have no "proof" that Strom has attempted to have me fired by going to my administrators. Despite the fact that he openly defended his actions on the NG. So, who's done more real world "harrassment"? Third, You never seem to notice that my tirades always follow Strom's denounciation of minorities. I never do more than respond. Finally, all I'm suggesting is that Strom should be held responsible for the links he deliberately chose to hang on his web, in addition to his own writings which use the same ideologies. And all I'm suggesting that should be done is for everyone to read Strom's page on their own.

5. Free expression is a two-way street. Strom has the right to hang his webpage. I have the right to ridicule and mock the ideologies he supports. You have the right to call me juvenile for fighting with Nazis. Everyone has the right to their own opinions and everyone has the right to ridicule anyone else for they beliefs being advocated.

6. Your dismissal of Strom's wife's interview employs faulty logic. You suggested that we not extend much credibility to her because of her prior involvement in supremacist activities. Really? First, that seems to totally undercut all of your free expression/opinion discourse which you so carefully extend to Strom. You do understand the problem with argumentative inconsistency, don't you? You argue we should not judge Strom because of the ideologies he has previously worked on behalf of, but you totally dismiss this poor woman because she was already in the National Alliance when she met Strom. That's really weak thinking. Second, the fact that she is explaining, in the interview, why she came to realize that the Nazis around her were all personal

losers seems to be conveniently ignored by you. I think that her credibility is high and saying that is my free expression right, isn't it, Peter?

I once thought Peter Maus was a pretty bright guy. But his recent deterioration in logical reasoning seems to make him far more interested in protecting the poor Nazis from my harassment than in using his far superior persuasive skills to counter their horrid propaganda. That's his choice, but I'll have the right to highlight his inconsistencies as long as he applies his free expression critique only in my direction.

BTW, Mr. Maus, I've spent a great deal of time in Evanston and I am aware that there are racist white-only clubs in this Jewish enclave. I am not defending the Jews as the master race. You tirade me for making assumptions about your arguments, but you seem to have little problems with the quick assumptions employed by yourself.

I am not engaging in this discourse just to be debating. I was simply using my free expression rights to counter Strom's initial statement. I'd rather be talking about shortwave. I am appalled at what Strom believes. I have a right to express my disdain in whatever non-violent fashion I choose. I think Maus and I agree almost totally on substance and disagree primarily on process grounds. I have no taste for his genteel approach to Nazis even if they are bright and engaging. I don't want to discuss the pros and cons of race purity over tea and crumpets with the likes of Kevin Strom. I am not preaching "love and hugs." And those are my rights.

Offended out of any desire for ribs,

Bryant

Guess you do not listen to 7.258 MHz, lower freqs on 10 meters or 2 meter simplex freqs. I tried using MIDCARS this summer but, it sound more like an organized truckers net rather than what it used to be years ago.

I have heard truckers down the CW portion of 10 meter and on 2 meter simplex channels when traveling. They use call signs that do not match what the FCC issues. In one case I heard a W8FUK, check that on WM7D'd website.

If all leaves 27 MHz then it will be dead but, we do not have to worry about that most CBers do not even want to fool around learn what little it takes to get a No-Code Tech License. They are appliance operators, they go to Rat Shack buy a 10 or 2 meter radio and antenna plug it in and talk. They pick a call just like they do for a handle on 11 meters and go. No muss no Fuss as the very old clique goes.

You're right that contesters don't want to use better techniques.
It wouldn't be "sporting". I can understand that, hunters don't use
precision laser guided munitions for the same reason. But you're
also right to note that contesters are only a small fraction of the
world's 3 million amateurs, and as amateur radio activity grows,
are likely to become even a smaller fraction. So these sorts of
operating techniques aren't addressed toward the radio gamer.

>some direction or another. I'll pass.

We are facing a looming demographic crisis over the next decade, but
hopefully it won't always be so. If we succeed in attracting healthy
numbers of new amateurs in the coming decades, we'll need techniques
to allow them to operate without excessive mutual interference. (We're
very unlikely to grow to 20 million, but the technique Carl and I proposed
could accommodate that many, or allow more throughput for a smaller
number of operators.) We should be exploring those techniques now,
and not waiting until chaos occurs on the bands. We have the luxury now
of being able to take some HF spectrum and use it to test out these
techniques without adversely impacting current incumbents. That may
not always be the case.

>>Or we could have much larger throughputs with a
>>somewhat smaller number of users if that's what we desired to

>Problem is it ain't RADIO, Gary. We're in it for the radio, not the
>throughput rate.

Radio without content is just noise. You may have nothing to convey to
another person beyond an unvarying contest exchange, but hopefully
others do. Otherwise, amateur radio is just a noise generator. Therefore
throughput *does* matter. It always matters when information is transferred
from one person to another, whatever the means. For some sorts of
amateur contacts, 20 WPM seems to be an adequate throughput, and
Carl and I proposed a system to accommodate that for a *very* large
number of amateurs. But other sorts of amateur activities aren't satisfied
with a throughput that low. The equivalent of voice communications requires
a throughput on the order of 120-200 WPM, and graphical content requires
a higher throughput yet. I'm very confident that there will be amateurs who
can exploit whatever throughput we can make available to them.

>>From my viewpoint as an experimenter, I wouldn't like to see us

>game and hasn't been since spark days.

Analog operation has dominated amateur radio for many years,
primarily because that was all that was available within amateur

means. That's no longer true. You're living in the past and refuse
to examine the impact that newer technologies can have on the
future of amateur radio. As the Amateur's Code says "An amateur
is progressive" . Rather than looking to the past, you need to be
looking to the future. We need to be preparing the ground today
for what amateur radio will be like 10 or 20 years from now.

It was primarily shortsightedness that led to the decline of US industry.
People looking at only the next quarter can't see the larger trends
that must be accommodated for long term success, and ultimately
get left behind, become obsolescent, backward, and irrelevant.
We should not fall into that trap, but unfortunately we are at present
doing just that. The radio communications world is changing rapidly,
but we aren't. That's not a healthy set of circumstances for amateur
radio.

>>>What barriers are currently in place or under consideration which are

>>a practical solution for some legacy modes.
>>
>You got that right! Don't tell me "Oh, just turn on yer noise blanker
>and we won't bother you" like Stevenson said. When pigs fly.

Yes, the legacy modes are not very robust or efficient, and must be
given some protection from more robust techniques. It is a necessary
political compromise. SSB faced the same problem 50 years ago in
amateur radio. The legacy users couldn't deal with it, so we had to
de facto partition the phone bands to accommodate that.

>>So I'd like to see the top
>>and bottom 50 kHz of the band be set aside for non-traditional modes,

>>and let the rest of the band be divided up any way traditional users might
>>like. (I want use of both ends so some diversity modes can be exploited
>>that can't be done in a single small segment.) Importantly, I'd like this to
>>be handled by gentlemen's agreements, not cast in stone by regulations.
>>I'm deliberately patterning this roughly after the SSB/AM partitioning that
>>was used in the 50s and early 60s on this band.
>>
>The lowest 50Khz has been cw dx country globally since before either
>of us were born and there is absolutely no way on the face of this
>earth by gentlmanly agreement or any other mechanism those segments
>will be given up by the mass of us for the sake of experimentation by
>a few. Ditto the lower ends of the phone segments.

Actually I proposed the top end of the phone segment, not the bottom.
For what I have in mind, maximum frequency separation is desirable.
The 80m band is a perfect case for this since it is virtually empty from
3525 up to 3750 most nights. That's 225 kHz of very under utilized
spectrum. Low baud narrow digital modulations can be used there
now, and are to some extent, but we can't do a lot to exploit diversity
in the center of the band, particularly under current emission rules.
Having the band edges, and a change in emissions rules, would allow
us to do that much more productively, and that underutilized spectrum
in the middle of the band could be used to accommodate legacy users
without extra crowding.

Note that we needn't take the entire 50 kHz at either end at first.
But we should plan to grow into that spectrum. Again this is similar
to the AM vs SSB situation which once existed on 80m. Other bands
have other concerns, and might not be suitable for this sort of
arrangement. But 80m is a very good place to test the sort of systems
which can exploit very wide shift diversity.

But I see you expressing a total intransigence to that idea. It is as if you
considered most amateurs to still be using crystal controlled radios,
and unable to shift up or down a few kHz to accommodate newer methods.
That dog in the manger attitude, and lack of vision, are major stumbling
blocks to amateur progress.

MLK listened. He described himself as a Marxist, though the boobs
are seldom informed of that. A documented article on the subject is
available at my site (url below), and you can also visit:

http://www.martinlutherking.org

>
> > 2) Comparing MLK to other known philanderers like Teddy Kennedy.
>
> Name a conservative icon of your own who *hasn't* been a "philanderer."
> There are darn few, conservative or democrats, who have been "pure." Gee,
> you folks like Thomas Jefferson a whole bunch but he philandered with a
> *black* woman. How do you like that?
[...]

Despite the high hopes of the Jefferson-haters, that hasn't been
proved by their much vaunted tests. Even _Nature_ magazine, and the
original author of the misleading article (Eugene Foster), have
backed off considerably from their original statements.

But, for the large number who accept the media image as reality,
it's an "established fact."

Just as is the near-sainthood of Communists Mandela and King. In my
site's lead article you can even see an icon-like carved idol of
King now attached to one wall of the National Cathedral.

Note followups.

With all good wishes,

Thanks for your response. Well, two people who have told me it's a quote from Groucho, so it must be
so, right? I just looked in my Harper book of quotes, and see about 8 Groucho quotes but not that one.
Well, now my interest level is up. You are correct. Take a look at
<http://www.therightside.demon.co.uk/quotes/groucho/>. I'll make the change.

You hit on the very point I have been wanting to make for several days. That is, that I as just a regular Joe Blow can walk into pretty much any Ham Shop and lay my dollars down and walk out with whatever gear I want to. No questions asked. Whether there be a 5 WPM standard or the current 5-13-20 WPM standard. If one had the money for the gear, then it would be a moot point to try to use CW as a quality filter since the gear is obtainable by ANYONE.

The last 2 trancievers I purchased, I wasn't even asked so much as my callsign.

Two books I own, an old brown edition of the ARRL Antenna Manual, and
W6SAI's Quad book are never far from my reach.

It sounds like you may be aiming at VHF/UHF....can't help you there.

If is it 160/80/40....from my view, ON4UN's book "Low Band Dxing" is SUPERB.
Since there are features of my "low band black hole QTH" that make 160/80
virtually useless, I only borrowed a copy. But is was GREAT.

FS: WONDERBAR RADIO FOR '57 CHEVIES - EXCELLENT!!!

www.ebay.com item 238999733

FS: Radio for a '57 Chevrolet Belair, 210 and all related
models. It is in near-Mint condition! It has very recently been
totally restored electronically. All new circuits, capacitors,
tubes and totally checked overy by professional radio repairman.
The chrome is in very excellent condition - extremely shiny!
Everything works on this very rare radio.
All metal is in
really great condition. No rust. All checked out and ready to play
in your classic car. ..
I can send along the receipts I have for all work done. It is still in
original box from repairman. Due to the age it i sold AS IS. However, if
it fails to work when
installed it can be returned to the repairman to be fixed at no
cost except for parts.
Chrome is truly excellent but it does have a couple of tiny 'specs'
on the knobs. No fading at all on the chrome. Very shiny. Black
buttons are mint. Needs nothing! Tops of tubes have a nice shiny
chrome on the glass. These were not chrome plated but are a natural
part of many tubes. Lettering on "Wonderbar" switch is perfect.

Hey Willy,

You can find what your looking for at www.qrz.com

What you do with your radio is up to you. All my gear is modified, but I exercise good judgment in using it in ways it was designed actually designed to work, and not in such a manner which causes any problems. And don't worry about all those smart comments from other people. They sincerely mean well, but come across in the wrong manner. I mean, its not as if you can't get the mod info if no one tells you here !! Lets get real . . .

How did you know that the radio failed to meet FCC spectral-purity requirements? If the Review addressed that, but then went on to review the rest of the radio, I see that as fair and balanced. Which radio was this? I recall a radio that had a spectral-purity problem at reduced power, but that met the FCC spec at 5 W. I recall another that was spec'ed at 5 W, but put out just over 7, but met the FCC 5 W limit, but not the -40 dBc requirement for power > 5 W. In these cases, the Review reported on what was found and then went on to the rest of the issues wrt the radio under Review.

It absolutely amazes me that these people claim that a reduction in the regulations or the code requirements are a plot to get rich by Fred and others by selling more books and study materials. It does not take a genius to figure out that even if the new regulations bring many more Amateurs into the ARS. The fact that the FCC reduced the license classes down to three and the code down to five words per minute means there is actually less to sell since the reduction means three less study manuals ,videos and two less code tapes to sell.

It seems if these people were interested in getting rich selling us all those goodies, the smart move would have been to support the status quo since it would have meant double the opportunity to sell all that material.

Maybe you should give it a bit of a chance. IIRC the net wasn't made
public until 1992 and most of us are still communicating on it via old
copper phone lines the technology behind which dates to what ? late
1800's early 1900's? Wait till they roll out more of the fiber optics
in next 3 or 4 years along with DSL / satellite etc. I think we're
just seeing the tip fo the iceberg wrt changes the net will bring.

Much of the information for hams is found in the material that ARRL publishes. If you compare the prices of ARRL books to other similar publications, you will see that the League material is quite reasonably priced. The ARRL Web page is loaded with information that is not part of "a publishing house."

> They get more giddy members, lose a few pissed off hams who wasted their

And whom at ARRL gets to keep all this money? I would LOVE to see such a technical certification program be self funding, or even raise a few $$$, as long as I got to spend it on attending a few more industry committee meetings. There are things going on with xDSL, home phone networking and numerous other places that I would love to stick my fingers into. Yes, the League does indeed have to consider the financial implications of what it does, but I would be mighty disappointed if they did not.

On that we agree , Amazon has never made a _penny_ in profits they've
always been in the red, but it's valued at ~ 22 Billion. If Ebay was
valued at the same (P/E) price to earnings ratio as GM (8) it would
sell for 16 cents instead of $134.00 ..... Just for grins the other
night I did some rough math and for Ebay to stay at its current price
and get to a P/E of 20 using current conditions they would have to
host ~ 1.2 Billion items or roughly about 12 items for _every_
household in the US ;)

Not a bad plan, acutally. The League now offers DXCC and code proficiency awards for operating achievement, and both are reasonably popular programs. On the other hand, they offer nothing for technical competency--perhaps the most important area of all. If it's a bad deal, people won't buy the books anyway, so what's your panic. If it is a good deal, perhaps people will learn things above and beyond entry-level and the common good will be served. Get your thumb out of your butt and lighten up, OM!

The last thing I need is another RFI project, but I want to add audio clips to the ARRL's web pages on RFI. (http://www.arrl.org/tis/info/rfigen.html).

We can probably create a number of them here in the ARRL Lab, but if anyone has any RFI sources that can be specfically identified (power line insulator tracking, furnace ignitor, switch-mode power supply, etc.), please either send me an audio file or a cassette tape. We want to put these on the web pages so hams who hear a noise might better be able to identify it.

Instead, the world is hip-deep in an excreted material of a different nature....

The Internet is not a "service" owed to anybody. It is a collective and a cooperative not unlike what HAM radio once was (and can still be). I can contact just about any host I want to, and set up a machine to do just about whatever I want. THAT is the Internet. It certainly doesn't exist so the cretinous masses can applaud and say "Whee!"

It is a magnificent marvel of modern technology, self-healing, expandable, infinitely upgradeable, and it will be what the minds that help make it what it is, make of it.

And when things don't go 'just so' we look for someone to hang the blame on. And if that someone is a horse, well, then, the glue factory. If its a person or company, we jeer, sneer, and sue.

No wonder there's so many problems in the world....

Tip#1: The media, which is totally clueless and a slave to the dollar, can't "control" the Internet. They report hype because it keeps an audience between commercials. They will hype anything about the Internet because folks will watch, which sells commercial airtime. You've probably been misled into thinking it was a panacea. It's not. It's just another tool, like a car, or an egg timer. Use it or abuse it, but it is what it is.(NOT what a salesman or media drone tells you it is.)

Tip#2: An analogy to the Internet might be the interstate highway infrastructure in this country. It was not constructed so we could all jump in the vinyl woodgrain station wagon and go to Yellowstone with ease. It was designed for mobility of military hardware and personnel; the benefit to the citizens was a side-effect. Yes, we pay for it through gasoline taxes. But it has never been a "service" for us weenies to applaud.

Tip#3; The Internet is evolving, and it is young. The corporate free world hasn't figured it out yet. Bugs and glitches exist, especially with so much technology moving at mind-blowing speed. It's amazing--this vast wonderful tool and all we can do is hold out our hand, pay some pocket change for equipment, and then when it's not 'just so', damn the thing to Hell.

Tip#4: If we don't like the "service", I say "change it". Make something else happen. With technology like the Internet, understand there is no "fat cat" or "editor" or "boss" or "committee" or "company

policy" to stop you. YOU have the power to make it happen.

I don't know of anything in life where we can just sit back and shake our heads, and then suddenly and magically everything happens perfectly, and for free.

(I do realize, though, that Americans are more and more turning into this. No responsibility, always some else to blame, sue, sue, sue)....like the lady suing over late delivery of Christmas gifts for her son. Send 'em to Russia for a while....make them realize just how good they HAD it.

Tom I won't even begin to compete on this subject because I don't know enough, but the handbook or some antenna book had plans for 6 and 2m J poles which were to be installed inside of PVC and there were specific comments made about tuning after the antenna was installed because of large tuning differences between being inside and out and even more so with the type of PVC being used. I'm looking to see if it was an ARRL book I found that in :)

Doc, For my part, I check this daily. Anytime I see a discussion I can augment, I do.

Soon, however, it'll be like old times. My 75 foot tower is being manufactured as I write. The tower guys are ready. This time it's gonna be a three or four element quad. The interior is being designed specially with circular operating panel for the ham and the FM station.

So, am looking forward to like QSO's to the ones we shared more than a decade ago. I wish I could make more of a contribution here than this strictly personal excitement.

Well, lets see, Nelson Mandella is a self admitted communist, and the
Democrats love him.

MLK walked very close to this line with the friends he had all around
him.
Democrats idolize him.

Castro is a known commie, yet Clinton wants to warm up to him this year.
Democrats feel the need to be friendly with another communist.

Red Chinese accept our technology (nuclear) in return, Comrade Clinton
gets some DNC millions.
Democrats now dealing with communists.

Why Do Democrats Love Communists So Much???

Actually my interests are sort of outside the normal amateur radio. I'm pursuing amateur radio
astronomy and trying to get a better understanding of some of the many diverse designs that people
play around with in that hobby. Actually the most popular antennas seem to be satellite dishes.

Actually my interests are sort of outside the normal amateur radio. I'm pursuing amateur radio
astronomy and trying to get a better understanding of some of the many diverse designs that people
play around with in that hobby. Actually the most popular antennas seem to be satellite dishes.
Thanks for your response.

Good point. If that is the only way to tell the difference, then
there is no difference. Well, we knew that...

By the way, I'm an extra with a 1X3. How does this fit into your New
Order of Extra Class Licenses?

Jeffrey Herman wrote
>Several of us did pose that scenario to the FCC a few years ago and
>each caller received the same response.

That's in Cecil's skeptical range. Any direct documentation that says it's OK to use your ham station to purposely *jam* an intruder?

>Don't throw test carriers; instead, call CQ in an attempt to begin a QSO
>with another ham.

So you say jam by pretending not to jam? Why would you do this if it was legal to jam? Probably because it's not...

>It's no different than carrying on a QSO under key clicks emanating
>from someone located 20 kHz away. It's no different than carrying on
>a QSO on say, 14020 kHz, on top of a harmonic emanating from a station
>transmitting on 7010 kHz. Key clicks and harmonics are unauthorized
>emissions.
>Ever transmit through 2m intermodulation products?

None of that would be defined as jamming...

Message-ID: <38841092.3C486FBA@usa.alcatel.com>
Source record: 121277

OM,

The logical flaw in your argument is that operating HF does _not_ stop us from operating on VHF, UHF or even microwave; I do it myself. Sometimes all at the same time, from the same car.

Different bands have different characteristics, which lend themselves to different styles of operating and to different activities on the air. That is not a drawback. It makes Amateur Radio more attractive.

If anything, people who are attracted to Amateur Radio will not only join us because of the joys of HF DX, but will also move onto the VHF and higher frequency bands, increasing our population there as well, and making it less easy to expropriate them.

Cheers,

Cortland
(ka5s@saber.net)

PS: 144-146 MHz is a worldwide Amateur allocation, too.

PPS: Prices of good (not fancy, just good) HF rigs are in the $700 region. Getting started has not been easier! With outfits like SGC and ElecTek in there, the competition will KEEP prices low.

Actually, Radio Shack didn't create the FRS, they revived something
that has existed since 1947. In the old days, the FRS was called
"Class A Citizen's Band". It had kind of gone into a state of non-use
because darn near no one knew it even existed. Have to give Tandy and,
to a lesser extent, Motorola, for reviving it.

>thirty who is a liberal...is brainless." ?

PJ may have said it too, but I believe Winston Churchill gets credit
for first saying this. As best I can remember, he said it as such:

"If you are not a liberal before you are 30, you have no heart. If
you're not a conservative after 30, you have no brain."

Most folks don't realize that, in his younger days, Churchill was a
member of the Liberal Party in Britian. The Conservatives never really
did trust him, even during WW2, especially with the Beverage Plan for
the social welfare state drafted by the Churchill government in
1943-44. As a matter of fact, what got Churchill defeated in 1945 was
that he would not implement the Beverage Paln fast enough - the
Liberal/Labour slogan against his was "Beverage NOW".

P.S. BTW, who was the last President that was a licensed ham? My guess
would be Hoover (1929-1933), though I don't know if he held a license
while he was in the White House. He did in later life I know I
remember him as having worked either for or with the ARRL promoting
ham radio in his later years, and remember when he died in 1964 the
ARRL had his picture on the front cover.

Last presidential candidate I know of that was a ham was Barry
Goldwater (K7UGA/K3UIG) in 1964. Still remember my one and only on-air
contact with him in 1966 on 20M. Unfortunately, don't have the QSL
any more.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

.....

Current Events:

SACRAMENTO, Calif., Jan. 6 /PRNewswire/ -- The Y2K Bug is gone but the supplies you purchased to get ready for the New Year should stay. The Governor's Office of Emergency Services says that if you want to be prepared for an earthquake, severe winter storm, or fire then you need to hold on to your canned goods, water, batteries and other preparedness supplies you purchased for Y2K.

``Y2K was a terrific opportunity for California residents to practice preparing for the many emergencies and disasters that have plagued our state in recent years,'' said OES Director Dallas Jones. ``If you prepared for Y2K then it was money well spent. The supplies you set aside will serve you well in the event Mother Nature strikes your home or neighborhood.''

Within the last 10 years every part of California has suffered the effects of natures wrath. From major earthquakes, severe winter storms, and wildland fires, residents across the state have had their lives disrupted to some degree.

``No matter where you live in this State, you are not immune from disaster,'' added Jones. ``This is why it is important to keep your Y2K supplies on hand or get the necessary supplies to help you get by for three to seven days.'' Suggested items include:

* One gallon of water per person per day

* Plenty of nonperishable food

* Alternative cooking sources (i.e., campstoves, outdoor grill)

* First aid kit

* Batteries

* Warm clothes and blankets

Excess perishable supplies from Y2K preparedness kits can be donated to a local food bank or other charity.

For more preparedness information, contact your county Office of Emergency Services or visit the OES Web site at www.oes.ca.gov.

California Governor's Office of Emergency Services

EMC219 Y2K and GOOD TIMING 2/2 For release 1/10/2000

Continued quotation from an article in SYNCHRONICITY NEWS 6.0 - December 1999 newsletter by Paul O'Brien:

"So, what is the secret to manifesting our desires? It's the last thing one would expect, another paradox. The secret is Acceptance.

"As counter-intuitive as it may seem, Acceptance is the most powerful catalyst for change. For example, when you unconditionally accept someone just the way they are, that acceptance gives them the space to change according to their true nature and their natural desires (and it makes them want to be around you!). Whether you are trying to direct it or not, change they will. But when we try to force change upon someone, to get them to change according to our attachment to the way we want them to be, they change with a generous amount of twisting, and resistance to our controlling efforts. We might consider this kind of growth beautiful in a bonsai tree, but it is behind most of the big problems in relationships.

"Taking a Taoist approach on this one,I try to regard myself as a "fledgling warrior of acceptance," because acceptance can be so challenging. As media relentlessly reflect our collective shadow, we are exposed to all kinds of negative information -- usually labelled 'news' -- that can be difficult to accept or downright scary. (Some of it -- Y2K paranoia, for example -- may even emanate from our own community and be spread via "the peoples' media" of the Internet.) In any case, icreasing levels of anxiety are the result of our struggle with the fear-mongering propaganda bombarding us on all sides.

"To take refuge in the knowledge (i.e. "Faith") that there is a Plan, according to which everything is perfectly unfolding, is not easy. First of all, it demands that we let go of our attachment to knowing the Plan, to being able to figure out WHY things happen the way they happen, to making things happen or even demanding explanations. How often have you seen someone insist on coming up with an explanation about why something happened, what they did wrong, etc. -- because what happened was not what they had in mind. But designing the Plan (or calculating karma, for that matter) is not our job. Our job is to play the cards we are dealt -- to first of all ACCEPT the hand, and then play our cards as well as responsively as we can.

"To stay in the flow of the game is the challenge we are called upon to make in the face of Y2K, symbol of Change. As long as we make our choices in sync with Divine Providence, Destiny, Fate -- or whatever you want to call It -- you can feel secure in the knowledge that you are doing the best you can and that you will be provided for. All you have to do is stay in sync!

"Faith, patience, insight and acceptance -- these are the qualities that help us manage Change and leverage perfect timing in our lives. Remember, you WILL get everything your heart desires --it's just a matter of timing. Another word for this is Grace.

"May the grace of perfect timing be with you, and may this special New Year inspire you to let it guide you in a graceful way."
(end of quotes.)

Marty Roarke <M13069@aol.com>
Fulton, NY

Hello, I am currently a member of our local R.A.C.E.S. in Oswego County. I've been a ham since 1991 and enjoy helping where help is needed.

George Richardson K6HOZ <k6hoz@sbarc.org>
Santa Barbara, CA

I have been a licnsed ham for over two decades and very active with the Santa Barbara Amateur Radio Club, (SBARC). I'm also the current EC for the South Santa Barbara County ARES team. Looking forward to keeping in touch with others interested in emergency service.

.....

Current Events:

ARRL PURCHASES COMMUNICATIONS QUARTERLY

The ARRL has purchased the Amateur Radio technical journal Communications Quarterly from CQ Communications and will merge the publication with the League's technical journal QEX. The change becomes effective for subscribers starting with the March/April issue of QEX. The new combined publication initially will serve a joint readership of more than 7000. The magazine will bear the legend, "QEX, incorporating Communications Quarterly."

ARRL Executive Vice President Dave Sumner, K1ZZ, said the League is pleased to have the opportunity to demonstrate its ongoing commitment to technical excellence in Amateur Radio through the combined publication. "Merging Communications Quarterly into QEX provides a rare synergistic opportunity to turn two good publications into one that's even better," he said.

The purchase arrangement followed extensive discussions with Communications Quarterly publisher Dick Ross, K2MGA. Conversations about the viability of Communications Quarterly and of QEX as standalone magazines--combined with the League's commitment to maintaining a publication devoted to technical and experimental topics--resulted in an ARRL offer to purchase Communications Quarterly. Ross called the deal "a win-win situation." The purchase price was not disclosed.

Published for the past nine years under the editorship of Terry Northup Littlefield, KA1STC, Communications Quarterly has billed itself as "the philosophical successor of Ham Radio magazine." Littlefield was Ham Radio's editor when CQ Communications purchased the magazine in 1990, incorporating the general-interest portion of the magazine's content into CQ and launching Communications Quarterly as a venue for more highly technical material. Ross said he regrets that neither CQ nor the League has an opening for Littlefield, who is exploring new opportunities. "We're going to miss her," Ross said.

QEX Editor Doug Smith, KF6DX, will continue at the helm of the combined publication. Smith called the pairing of Communications Quarterly and QEX "a logical economic move" that

ensures the availability of a top-quality technical forum for experimenters. Smith invited technical articles as well as specific suggestions for articles or topics to be covered in future editions of the magazine. Submit articles or suggestions to Doug Smith, KF6DX, kf6dx@arrl.org; QEX/Communications Quarterly, ARRL, 225 Main St, Newington, CT 06111.

Current Communications Quarterly subscribers will receive the combined QEX/Communications Quarterly every other month, and subscriptions will be extended according to a formula spelled out in a letter to subscribers. A subscription to the new, combined QEX/Communications Quarterly is $34, discounted to $22 for ARRL members. Direct subscription questions to Circulation Department, ARRL, circulation@arrl.org; 860-594-0355. (The ARRL Letter)

.....

What's New on the Net:

Attention: RACES/ARES and Emergency Communications Groups

I have started a new web site to sell the hard to find and "elusive" Anderson Powerpole connectors that have become (or are becoming) the most popular power connector for interchangeability in the emergency community along with Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

http://www.powerwerx.com was started with hearing the concerns of hams across the country in newsgroups of "where to purchase these connectors" and other "hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "one ham helping another" is now extended from my web site to you.

Ken, KM6YH
www.powerwerx.com

This week's EMCOMM Bulletin:

EMC220 Synchronicity and you?
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio

By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC220 Synchronicity and you? For release 1/17/2000

"Synchronicity takes the coincidence of events in space and time as meaning something more than mere chance." (Carl Jung)

"Carl Jung is the founder of what has come to be known as "depth psychology." His postulation of universal principles, or "archetypes" operating in the field of what he defined as the "collective unconscious," as well as the synchronicity theory, make for fascinating study. As for the latter, in his work "Synchronicity: An Acausal Connecting Principle" Jung explained

"This ...involves a certain curious principle that I have termed 'synchronicity', a concept that formulates a point of view diametrically opposed to that of causality. Since the latter is merely statistical truth and not absolute, it is a sort of working hypothesis of how events evolve one out of another, whereas synchronicity takes the coincidence of events in space and time as meaning something more than mere chance, namely, a peculiar interdependence of objective events among themselves as well as with the subjective (psychic) states of the observer or observers."

According to Jung, synchronistic thinking is "field thinking," the center of which is time, a moment in time. From a synchronistic point of view, the important question is not why has something occurred, or what factor caused this effect, but rather what likes to happen together in a meaningful way at the same moment. What types of events, including psychological events, happen together in time?"

"The Synchronicity Principle.

We have some notion of a tendency of events to cluster around a moment in time in our own culture, as evidenced by folk sayings like, "Good things (or accidents) happen in threes," etc. This only exists as a superstitious kind of popular awareness. Nevertheless, it has long been evident that there is a tendency for several scientists at the same time to make the same discovery completely independently. And, in histories of science, one can observe that there is a tendency for certain ideas and inventions to crop up in different places at the same time. Or, on a more mundane level, one has been known to wonder why the most needed library book is always the one already checked out?"

Quoted from Paul O'Brien and Visionary Networks, Inc. Portland, Oregon web page at http://www.IChing.com (end)

As managers and participants in EMCOMM units it well may

be that - IF we will allow ourselves to do so - we can benefit from looking more closely at events and see what timing and tandum events have to 'tell us' that we can use beneficially. Like the day I took a county RACES plan up to the State for its concurrence, and ended up being asked to become the State RACES Officer, which was something I really didn't want to do at the time. But events caused me to pause and look at the situation in a different way. That led to the eventual emergence of what today is our ACS program, which includes the RACES. Many was the time when Stan Harter (first paid staff coordinator of the RACES program) and I would come up with the same idea within minutes of each other. We learned those were powerful times offering new ideas and opportunities. Sometimes the change was painful but it always turned out for the better in the long run.
Cary Mangum, State ACS Officer, California. (W6WWW)

Submit suggestions, topics or constructive comments on the bulletins to cary.mangum@macnexus.org or cary_mangum@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a Landline BBS: 916-262-0856 (graphical & standard interface); and an Archive: ftp.ucsd.edu/emcomm or ftp.ucsd.edu/hamradio/races

.....

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and suggestions that will benefit everyone.

See you next week!

2462. Yaesu FT-1000 Fan Noise

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-17 00:00:00 UTC
From: CC <nowires@home.com>
Message-ID: <3882D136.455D97D5@home.com>
Source record: 121340

Does anyone know a solution for the FT-1000 "groaning" fan noise?

This apparently is common problem. I sent the rig to Yaesu asking them to replace the fan but they sent it back saying nothing was wrong with it.

I'm hoping there is an aftermarket fan or some other solution.
Otherwise it is a terrific radio.

Thanks.

Yep, here are some quotes from some other great visionaries:

" There is no reason anyone would want a computer in their home."
- Ken Olson, president, chairman and founder of Digital
Equipment Corp., 1977.

"Computers in the future may weigh no more than 1.5 tons."
- Popular Mechanics, forecasting the relentless march of
science, 1949.

"I think there is a world market for maybe five computers."
- Thomas Watson, chairman of IBM, 1943.

" I have traveled the length and breadth of this country and talked
with the best people, and I can assure you that data processing is a
fad that won't last out the year."
- The editor in charge of business books for Prentice Hall,
1957.

"But what ... is it good for?"
- Engineer at the Advanced Computing Systems Division of IBM,
1968, commenting on the microchip.

Dick, tell us, according to Part 15, in which ham bands may
unlicensed operators use low-power transmitters. Certainly not
on HF.

Jeff

Surely an amateur frequency would be the worst possible choice? We would

In the last few days K1BQT has resorted to death threats against me.

This is a VERY serious situation.

PLEASE! If you are a friend of K1BQT, or just an acquiantance, TALK WITH HIM!
Calm him DOWN!

The man has a gun collection, lives an hour from me, and is clearly sending
messages telling what he wants to do. ('Chips Final Act'; 'North End
Solution'; and so on).

PLEASE! For HIS SAKE--talk with him.

Thanks!

Chip N1IR

Asked question, answered same. Why the persistence Pinky? I thought you
said the evidence didn't exist, so what difference does it make?
However, the evidence does exist, the 1000MP does exist and the offer to
prosecute the other party remains a viable option should there be some
agreement as to what will happen. Since you are not that other party, I
think this particular divergence of the thread is over. Your questions
are of no consequence (much like most of your posts).

Best you should spare with Larry R. He's more your speed (molasses on a
winter's day)

toodles NARF

Gosh oh gee-what's happened to these once exciting pages filled with wit, satire, wisdom, wisdom teeth. puns, facetiousness and slap around silliness? The only thing of interest regarding .313 and environs is Mr. Cunningham's lampoons which are indeed poignant. The Vero Zero is gone not that he really contributed anything thanks to his U. of Miami English courses taught while surfboarding. And his shill, Studley Avotec from Port Washington is awfully quiet too. Polly as you know is parading up and down 20 meters in vestments preaching peace on earth and good will to all men who believe in evil; Billy Jack Moore is a 20 meter ghost; Whoa Whoa Cue has moved from LaBelle to God knows where and Herbie shows up infrequently screaming absudities about Ruth Carolyn Hoffman. Quite honestly I'm bored. Tell me-is ham radio a mere rehearsed procedure of calling CW, my name is, my QTH is, I'm running this, my antenna is this and please QSY? If it were, would you like it? Well folks this forum has become an archetype of it. If we can't have some more fun here; if we can't let down our hair even a few strands encouraged by Rogaine, then farewell. One can have fun without flaming but dammit what's going on here is drooling. I no longer get secret info from the Vero detectives-everything's become a gigantic prune. Too bad!

Congradulations on your values.

Good friends are a rare commodity.

QST is nothing more than a processed tree with ink
spattered all over it. run buy a bunch of incompitent sexist.

Now before any of you newbies disagrees, look back
about 15+ years and you will find cases of women who
tried to run for ARRL office and were DENIED because
of their SEX.. this happened somewhere in the Midwest.

Can anybody remember more about this??

Just my opinions

Bob

How about neither -- Ham Radio was in trouble until they started lifting the code requirements.

And be careful who you insult (referring to the "no code CB whiners") - after all, they could be at the other end of the conversation on HF, code or not and get you call sign, remember who you are, and conveniently forget to send the QSL...

After all, with talk like that, people might think you have a bad attitude!

I dunno, Jeff...Maybe you'd better read some of Ed Hare's
stuff on the Part 15 "wireless modem" problem he's been
working on. They transmit far greater distances than most of
the little bugs, and they sure are on HF, and legally so.
But I'd guess that Ramseys stuff is on VHF>. Why put that
stuff on HF? That just complicates the antenna problems
inherent with such gear.

Only time will tell if e-commerce is a success or a passing fad. Remember that the internet has been around for a long time. Long before anyone thought of doing business on it. It was, and still is, primarily a medium of exchange for information and ideas.

E-commerce companies such as Amazon.com, Ebay, Yahoo, and others, will have to start showing bigger profits each quarter in order to justify their overly-inflated stock prices.

2487. ARRL Secret Elections Coming

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-17 00:00:00 UTC
From: mf_luder@my-deja.com
Message-ID: <85vm3v$k24$1@nnrp1.deja.com>
Source record: 121365
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

At last, ARRL will be free of W6ROD, who is featured on the M.O. site this week in a pose resembling a cross between Napoleon and Hitler. Note that all three destroyed what they tried to "save".

Furthermore, those of us who are thinking persons, unlike the majority of those who respond to my posts, will find this amusing:

"In a related vein, the Board will hear the second installment of a report from ARRL Executive Vice President David Sumner, K1ZZ, on Amateur Radio in the year 2010 and beyond. Sumner's report will expand on one of the themes of his preliminary report delivered to the Board in July 1999: voluntary certification programs to encourage continuing education and skills development by radio amateurs above and beyond the licensing requirements."

There were too many licenses. There was no need for new Novices, or new Tech Pluses anymore. But get this, Extras. They destroy the licensing system with their "the sky is falling" panic, then propose this crap to sell even more books in the future, and cover up the fact they couldn't care less about the license structure. As if some home study crap they publish will compensate for the diminished federal test requirements.

Excuse me, I have to go clean off my hip waders after wading through that announcement...

2488. New Internet PacketCluster Site

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-17 00:00:00 UTC
From: nfivein@my-deja.com
Message-ID: <85voi2lvj1@nnrp1.deja.com>
Source record: 121366

You are welcome to connect to the New Internet PacketCluster Site at KC0DJO in Duluth Minnesota.

The IP address is 209.32.226.63

At your first check in you will be asked for your Call, Name and QTH. Please enter your QTH in the form: Chicago IL or Oslo Norway so that we will know where all our new friends are from! You will also be reminded to SET/LOCATION, that is optional but recommended. If you properly do set your location, then the cluster will calculate beam headings for you to various prefixes. For HELP on these commands you may type

HELP SET/NAME
HELP SET/QTH
HELP SET/LOCATION

To see what you have entered type: SHOW/STATION -your call-

You can correct any errors using the SET commands.

For more information on PacketCluster including a users manual go to this website:

http://www.cestro.com/pcluster/index.shtml

Ideally you should use your logging program to make your telnet connection. Its a huge advantage as then your logging program will monitor the dx spots and alert you to contacts you need.

However, here are very simple instructions using software already a part of Win95/98:

First connect to your ISP.
Click Start / Click Run
In the box enter: telnet 209.32.226.63
Click OK

You should now be connected to the KC0DJO cluster.

Enter your call. If it did not echo, then you will have to turn on local echo. Click on Terminal / Preferences.. and check Local Echo and then click on OK.

Now proceed as earlier described to sign on.

Try some common commands as:

SH/DX
SH/C
HELP

Welcome and 73 de Ron N5IN

2489. MLK Day: Time to honor a known communist sympathizer & adulterer

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-17 00:00:00 UTC
From: rfenforcer@aol.com
Message-ID: <20000117124022.01397.00000954@nso-ch.aol.com>
Source record: 121367

What are you doing to honor "the great" Martin Luther King today?

1) Reading The Communist Manifesto

2) Comparing MLK to other known philanderers like Teddy Kennedy.

3) Wondering aloud why MLK's birthday is a paid national holiday while the birthdays of George Washington and Abraham Lincoln are not.

4) Sending a donation to the Sons of the Confederacy in South Carolina to keep radical black activists from removing the Stars & Bars atop the Statehouse.

5) Wondering why we can have "Black History Month", "Black Pride Week", "Black Spring Break", etc...but not "WHITE History Month", "WHITE Pride Week", or "WHITE Spring Break."

6) all of the above.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

I sure wish the non-e-commerce commerce would do the same, but there are just too many dollars flowing into the market for that to happen. The old P/E rules of thumb are out the window.

Off subject a bit, but the awkward truth about Part 15 devices is, if WE interfere with them, it's held to be our fault; if they interfere with US, we are told to shut up. It's in our interest to see them kept off the Amateur bands.

2496. PSK31 and the TS-940

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-17 00:00:00 UTC
From: Bob Pierfelice <XYZ_p15218@flash.net>
Message-ID: <38836DD2.7B6EB710@flash.net>
Source record: 121374

---Problem: the Kenwood TS-940 does not allow selection of the narrow CW filter(s) in SSB mode and even if you modify it to do so, the frequency offset will be out of the filter's passband.
---Possible solution: use the FSK mode BUT the FSK mode does not appear to allow external audio as a modulation source, only the internally shifted carrier.
---Does anyone know if it is possible to use the Kenwood TS-940 in the FSK mode and inject external audio for modulation. I have no problem with permanantly modifying the radio's FSK mode to accept external audio.
Thanks and 73

Those who have asked me to post the entire text of this topic will find
that this quote is all that was said thus far.

The quasi-CEU idea is an obvious money maker. It likely is the result of
the YCCC mentality (K1ZZ is a member) which believes that all new hams
are incompetent boobs, yet the license requirements should always be
lowered. They want quantity in practice, but seek quality through
didactic ramblings.

Thus, YCCC sponsors "Contest Universities" where in all of a few hours
you are turned from a bumbling ass into a regular W6AW.

Since the ARRL will lose sales of 2 code practice CDs, and three license
manuals, they're covering their financial interests by pushing for yet
another book series.

This comes, of course, on the heels of the 5 wpm Extra, three license
class decision, which the FCC points its finger at ARRL as having pushed
for and the ARRL says the FCC would have done anyway, perhaps choosing
two licenses.

So, it's a win-win for the ARRL, which has, in the past 20 years, become
a publishing house, rather than a source of information for hams.

They get more giddy members, lose a few pissed off hams who wasted their time on the 20 wpm code test to suit the old guard, and will make even more money through this quasi- CEU stunt, by recycling their old license manuals.

When asked if it would be considered intentional interference
to transmit on top of illegal 10m "outbanders," the FCC responded,
"It's impossible to interfere with an unauthorized emission."
In other words, Aaron, they don't consider it as "jamming" if
the signal doesn't belong there.

Been there, done that, it has a few pointers that are true, but nobody
listens.

> 2) Comparing MLK to other known philanderers like Teddy Kennedy.

Name a conservative icon of your own who *hasn't* been a "philanderer."
There are darn few, conservative or democrats, who have been "pure." Gee,
you folks like Thomas Jefferson a whole bunch but he philandered with a
black woman. How do you like that?

> 3) Wondering aloud why MLK's birthday is a paid national holiday while the
> birthdays of George Washington and Abraham Lincoln are not.

Gee, is it really that hard to see why?

> 4) Sending a donation to the Sons of the Confederacy in South Carolina to
keep
> radical black activists from removing the Stars & Bars atop the
Statehouse.

SC must be a backwards state, that's for sure!

> 5) Wondering why we can have "Black History Month", "Black Pride Week",
"Black
> Spring Break", etc...but not "WHITE History Month", "WHITE Pride Week", or
> "WHITE Spring Break."

One of the benefits of the white majority in this country is found in not
having to rally around some "month," "week," or "break." Whites don't have
to -- *every* "month," "week," or "break" is a "white" "month," "week," or
"break." Blacks or other minorities are forced into "otherness" and as a
result have "months," "weeks," or "breaks" defined narrowly. In a more
perfect society, such distinctions will disappear; unfortunately, we're not
there yet.

> 6) all of the above.

Is it really that hard on you to celebrate Martin Luther King? I pity you
if it is.

Rog,

This Mf Luder is a world class grump. He hates everything about ham radio, he bad mouths the ARRL, he bad mouths contesting. etc etc. So what the hell does he like about ham radio? Apparantly nothing. We don't need his kind. Maybe he and Burt can get together and bad mouth together.

I've been licensed for 39 years. Only ONCE have I had a really decent antenna for DX. A homebrew wide spaced 3 element on 20. The rest of the time I've done it with wires. And you know something? I've had a ball. Stuff it MF Loser !!

>so I'm left with the April 15th change then I can start breathing new
>life into the hobby for me thats been basicly dead and boring for the past
>7 years.
>

1. I never said that people who get a license after April 15th would hate him.
2. You were exactly the people whining to change the code. Ok for you but not for those who
now
disagree?
3. You were one who called extras "elitist". In my book, that is considered a slur.
4. It is a falacy that ham radio is dying. Revisionism is of course very effective in any
political arena.

5. Glad you would have gotten your Extra if you could. Don't know why you didn't, and don't much
care why you didn't. You will have to live without the thrill and sense of self accomplishment
of not doing it. Your attitude towards others who did earn that self accomplishment leaves
something to be desired. Your above post doesn't abslove the fact that you couldn't just commend
the man for a good job. You had to qualify it and spin it.

>I did commend him, you just looked over it, and I'm commending him in
>this followup as well. I hold nothing against those who have passed
>their 20wpm past or present, Pre-Aprilist. I commend you for being able
>to accomplish something I could not because of choice, but because of
>ability. I missed the guy's handle and callsign but if he does happen
>to read this I'm am glad for him and I hope he's enjoying his new areas
>of operation.
>

I can agree with the commendation above, and I also again send my best congratulations to the
man.

>Now here is something interesting, I ask you to commend me when I pass
>my General Written and Extra Written Post 15-April. How about it Dale?
>Are you going to commend me when I past my new tests???? Or are you
>going to just harbor the hatred you hold towards the Post Aprilists?

No problem, I will give you exactly the commendation due. No more. no less. It will not be the
same as the man who did the 13 wpm as the requirements are not the same. I have no hatred for
post Aprilists as you so eloquently put it. I guess there must be as difference between the two
tho, since there is pre and post.

Of course you've had a ball. I run 100 watts usually, wires and verticals and you're the ass bitching that you CAN work everyone easily. There's logic.

Like about half of today's amateurs, you're a functional illiterate with a testosterone imbalance derived from the fact that your wife castrated you as a precondition of marriage. Go back and read what I use, I said it before this message.

Loser ? So what did you pick out of your closet this morning, the new plaid shirt you bought in 1982, a couple of HT's or just your gut ?

Of course you've had a ball. I run 100 watts usually, wires and verticals and you're the ass bitching that you CAN work everyone easily. There's logic.

Like about half of today's amateurs, you're a functional illiterate with a testosterone imbalance derived from the fact that your wife castrated you as a precondition of marriage. Go back and read what I use, I said it before this message.

Loser ? So what did you pick out of your closet this morning, the new plaid shirt you bought in 1982, a couple of HT's or just your gut ?

2508. Ham Licenses to be Issued on Blue (S)crap Paper !

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-17 00:00:00 UTC
From: mf_luder@my-deja.com
Message-ID: <85tvnkdln1@nnrp1.deja.com>
Source record: 121420

The FCC is borrowing a convention from the Social Security Administration, the premier welfare agency in the U.S. starting April 15, 2000.

As of April 15, the FCC will be using blue paper for new licenses. All amateurs who are upgraded after this date are urged to destroy these licenses IMMEDIATELY !

Do you want to go into a ham store, pull out your wallet and be recognized as a "ham radio welfare momma" ?

Show them you mean BUSINESS. If you receive one of these licenses, cancel it, throw it away, send it back to Gettysburg. Please, DON'T GET ON THE AIR !

You'll only embarass yourself when someone asks which size Beverage you run and you reply "in a 12 ounce mug"...

Typical; if you can't be wrong, you misrepresent.

The FCC has already started using the blue paper.

Is there any chance you will ever post anything positive?

No braindead....I don't have a problem in the wife area, not do I pick
out a HT instead of a shirt. What you seem to be unable to comprehend
is that amateur radio is a matter of LEARNING HOW TO OPERATE and
improve your skills....remember part 97? Probabably not. Look
dipshit.....since you obviously have NO CONCEPT of what ham radio
is...do us ALL A FAVOR and QRT.

Another series of stupid, idiotic comments from a world class grump.
How many times have YOU been asked to show a amateur license when you
went into a radio store? ZERO ! And your moronic comments about
someone not being a true ham after April 15th just shows your true
nature. Get a life MF Loser. What makes you better qualified? Can't
wait to hear this answer.

:
: Excellent point.
:
: Allow me to add that passing an exam only proves you have some idea of
: the rights and responsibilities of those privileges. However, knowing
: something and applying what you know are two different things.
:
: The world is filled with blithering idiots who can pass almost any
: written exam you put in front of them, yet when asked to apply what
: they "know" they are totally stumped.

The hardest exam out there are the 6 exams for the MCSE. Yet all
the questions are known. And it is still a bitch.

The GROL technical exam (element 3) also has all the questions out
in the open. Its 100 questions are a real bitch too.

> DIPOLE. I do just fine, thank you.

Dan, Dan, Dan. That's Mr_negativity. He doesn't have any "theory." He just complains about everything. He can't afford or can't build an amp, so he doesn't think anyone should have one.

He can't operate CW, or he would know better than to make an idiotic statement like, "sure, duirng [sic] the week you can work Europe with 5 watts on CW, but not no [sic] the weekends." Short of a SID or solar flare there probably isn't a time you CAN'T work Europe on 5W CW.

He blames the amps for the problem but criticizes the antennas, too. In another post in this thread he said, "I'm not for regulating antennas as that sort of "experimentation" is part of ham radio," but up above he posits the "escalation" as including someone's "high stack of phased yagis."

Of course if he understood anything about radio at all, he would know that propagation accounts for far more of the apparent strength of signals than any amateur radio amplifier and quite a bit more than any

reasonable antenna adjustment. But we can't let facts interfere with gloom and doom, can we.

He bemoans the death of ham radio but then wants to do anything to get more people interested (well, I guess that's what he wants; why else would he worry about someone taking up model railroading?). But he complains about all the activity on the weekends when, guess what, most people are available to operate.

Nothing makes this grump happy. However, I for one refuse to feel bad for using equipment I am authorized to use. And the last time I checked, I am allowed to use 1500 watts.

Say, you don't suppose he could actually cite some authoritative study that supports a link between leukemia and RF do you? Hah! But, lack of facts doesn't stop Mr_negativity from nattering on.

Frankly, he doesn't even have a ham license. What's his beef anyway?

I videoconference on a regular basis with people around the world using the free services of Visitalk.com with NetMeeting. The audio is often crystal clear. The connection is through a local number to my ISP (free call and free ISP) on a V90 modem. I have videoconferenced with people in Australia, Austria, France, Italy, Scotland, Ireland, Saudi Arabia...and the list keeps growing. I don't think the internet is dying.

>
The "familiar operator interface" in contesting is one's ears via
one's radio with the results highly dependent on one's cw and phone
operating skills and the Gods of propogation. Which actually isn't all
that different from non-contest operating. If we had any interest in
contesting by modem the technology would aready be on the Internet.
We're not and it isn't. I also need to point out that rudimentary cw
contest simulators are already available as downloadable freeware.
Decent practice as far as they go but they aren't the real thing, very
few ops bother with 'em. So much for simulators as a germain
discussion.
>
The biggest contests on the HF bands are the two annual CQ WW dx
bashes, supposedly around 50,000 ops get into it globally and we all
fit fine in the lower 40Khz or so of the low ends phone or cw which
leaves most of the spectrum open for non-participants. Where is the
market for a technology which could accomodate 20 million hams mucdh
less us contesters?? What 20million hams??
>
>We haven't begun to fully exploit what we can do with modulations

The inference seems to be that the ham bands are seriously overcrowded
and that there is a need to accomodate more users. Conversely, I keep
hearing that U.S. ham radio is suffering either zero or negative
growth. Something is outta whack here. Smells like agenda fodder in
some direction or another. I'll pass.
>
>Or we could have much larger throughputs with a

Throughputs of WHAT? Who wants to put what thru more and faster with
HF ham radio? My ISP already provides me with huge bandwidth for
$15/month and I can work the world with my $50 modem 599 both ways.
Problem is it ain't RADIO, Gary. We're in it for the radio, not the
throughput rate.

You just refuse to accept the fact that the character of HF ham radio
is in fact 99.9% station-to-station communications with just
unadorned analog radio. The guy in China ships a dit thru the magical
Ether with his radio, I hear the dit with my radio and that's what
it's all about. Experimentation is fine but it ain't the name of the
game and hasn't been since spark days.
>

>
I'm sure those restrictions can and will be relaxed for HF
experimentation and use just as the rules for 70cm SS were recently
relaxed to some extent to facilitate SS experimentation. But don't get
outrageous about it and expect the FCC or anybody else to hand you 1/3
of the 40m band so that a few experimenters can toss around some bits
and bytes which are interfering noise to everybody else.
>
>>Let's get down to some nits and grits: Pick a band, any band, say

>be handled by gentlemen's agreements, not cast in stone by regulations.
>I'm deliberately patterning this roughly after the SSB/AM partitioning that
>was used in the 50s and early 60s on this band.
>
The lowest 50Khz has been cw dx country globally since before either
of us were born and there is absolutely no way on the face of this
earth by gentlmanly agreement or any other mechanism those segments
will be given up by the mass of us for the sake of experimentation by
a few. Ditto the lower ends of the phone segments.
>
>RTTY has already been displaced from the top spot, but there are a
>number of other techniques that current regulations and band plans
>don't permit to be used at all. The market can't fairly decide when
>regulatory fiat doesn't allow the modes into the marketplace.
>
What you contend is regulatory fiat I contend are regulations which
are in place to avoid wide siganls (ssb, AM, FM) from interfering with
each other in narrow mode country therefore giving everybody an
equally fair shot at the limited space down the bands in which we
operate. Including the increasing number of qrp operations which is
another whole topic. The HF phone/image modes do not mix well with the
cw and digital modes thus the common-sense mandated phone/image
sub-bands.
>
I'm not a Luddite and while I'm not an experimenter I support
experimentation on the ham bands, I don't know a ham anywhere who
feels differently. I can easily envision a day when there very well
could be some wider digital modes in use on HF. But not to the extent
you guys are looking for at this point in history.
>
History is littered with tales of visionaries who didn't live long
enough to see their visions come true. It took more practical and
worldly developers who recognized the realities of the market and the
politics and human nature to move the vision into acceptance and use
at some distant time.
>
AM phone is still legal on the HF ham bands and it's as wide as it
gets by current standards and under current regs. So scale your
expectations back to something resembling workable reality and
petition the FCC to let you use the same bandwidth for experimental
digital modes and build from there. They'd have a helluva time defying
the logic. Or something reasonable along those lines. Else you and
Stevenson will most assuredly fade out of the scene as just two more
forgotten and frustrated visionaries.

mf_luder@my-deja.com wrote:
> So, it's a win-win for the ARRL, which has, in the past 20 years, become
> a publishing house, rather than a source of information for hams.

Well of course the League is a publishing house. On January 29, 1915, the Connecticut Secretary of State recorded the incorporation of the League under the following three articles:

"Article 1. The name of said corporation shall be The American Radio Relay League Incorporated.
"Article 2. The purposes for which said corporation is formed are the following to wit: The promotion of amateur radio, the organization of amateur radio stations, the promotion and regulation of amateur radio inter-communication, and the relaying of messages from station to station, and the printing and publishing of documents, books and pamphlets necessary to any of the above purposes.
"Article 3. The said corporation is located in the town of Hartford and the State of Connecticut."

Lucky for us that second article includes printing and publishing:
We participate in a self-taught technical hobby/service; not a day should go by without us gaining new knowledge WRT to electronics. The only publications I have always been able to turn to when questions arose which needed immediate answers were the League's pubs.

For some 85 years the ARRL has produced a handbook written so that even a novice can learn and understand from it. The government thought so highly of the Handbook that it was used to train military communicators during WWII. For the longest period, the Handbook was the greatest selling technical book ever published, in and out of ham radio.

During the 50s when SSB was finding its way into ham radio, there was no pub one could turn to to learn about this new mode except the League's SSB Manual. Also during that decade the FCC relaxed the regs regarding mobile operation - no one else published a mobile manual except the League (1955).

To whom could you turn to for the great ideas and techniques that appear in the Hints and Kinks booklets? Propagation and antennas: The Antenna Manual. Who else in the 60s produced a VHF Manual? And when that VHF crowd began exploring FM: The FM and Repeater Manual. The very first book in the 80s devoted to amateur digital comms was the League's Get Connected.

Publishing affordable technical books was one of the original goals in the League's charter; for 85 years they've made information available to the layman that was nearly impossible to find elsewhere. How in the world could you possibly find fault with this business side of the League?

Every ham shack I've ever visited in the last 30 years has had many League pubs on its bookshelves. We are (or at least were) a group with a voracious appetite for reading and learning. Luckily, the League has been able to feed us what we most desired.

Ham radio and reading are inseparable; and it takes a publishing business to do what the League has accomplished.

phil-news-nospam@ipal.net wrote:
> Does anyone have a list of the known cliques in ham radio?

Phil, someone told me a long time ago that a clique was something you didn't belong to. His point was that it is very easy to look at a group of people you think are doing something or enjoying something and think negatively of them because you aren't with them.

The thing is, throughout life there are going to be groups you aren't associated with; not because they are excluding you, but because you aren't in them. People sometimes want to put a negative light on associations, but without them there isn't much fellowship.

My advice would be to find some people you like or whose ideas you like and seek to join them and contribute. Then you won't have to worry about their *clique*; you'll be a part of it. One of the things you'll notice is that there is virtually never any organization or policy of exclusion in these groups you call cliques. Because it's a matter of perspective from the outside; negative perspective.

Be positive. Do what you want to do. Never mind what you think some group may or may not be doing. If you're interested in what they are, join them. If you aren't, move on to something else.

I've been in ham radio for a long time, and although there are groups to which I don't belong, and maybe even some I wish I did, I don't really think I could call them cliques. We just haven't gotten around to each other yet.

Aaron Jones <no@mail.com> wrote:
>Jeffrey Herman wrote

>>"It's impossible to interfere with an unauthorized emission."

>Can you reproduce the exact wording of that?

That is the exact wording. Call the FCC, ask for someone knowledgeable in Part 97, and present the scenario of a ham transmitting on the same frequency of an illegal "out-bander." They'll say the above, word for word.

Several of us did pose that scenario to the FCC a few years ago and each caller received the same response.

>I find it hard to believe that
>the FCC would authorize a vigilante ham throwing test carriers on every
>illegal signal he could find...

Don't throw test carriers; instead, call CQ in an attempt to begin a QSO with another ham.

It's no different than carrying on a QSO under key clicks emanating from someone located 20 kHz away. It's no different than carrying on a QSO on say, 14020 kHz, on top of a harmonic emanating from a station transmitting on 7010 kHz. Key clicks and harmonics are unauthorized emissions.

Ever transmit through 2m intermodulation products?

Jeff

Interesting that you should be such a staunch defender, Charles. Many of the so-called "black leaders" are outspoken adversaries of Jews such as yourself. Jesse Jackson's remarks concerning "Hymietown" would be a perfect example of this. Ditto for Al Sharpton, Kweisi Mfume, etc.

2528. FA: Philips DC 777 Car Shortwave Radio

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-18 00:00:00 UTC
From: D Bland <dwbland@my-deja.com>
Message-ID: <860qhreue1@nnrp1.deja.com>
Source record: 121140

On ebay at http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?
ViewItem&item=240434020

Philips DC 777 Car Shortwave AM/FM Radio Cassette Player
Picks up Shortwave 90M-13M Continous
Autostore 5 strongest stations on AM/FM
20 SW Presets, 5 AM, 5 FM presets
Security Code Theft Deterrent
4 Channel line-out
High power 4 stage output with fader
Wonderful Cassette player
Autoreverse tape transport
Clock
Direct entry keypad

This great sounding unit ships in original box with manual (not pictured), and all original mounting hardware and wiring. Unit is in excellent shape. All LEDs work with the exception of two on the preset indicator (not mission critical). LED's are not burnt out (press on the face gently lights them up again). An electronically inclined individual could repair this easily by soldering loose joints.
Note: Shortwave signals are more vulnerable to interference generated by cars. For an additional $5 I will include two filters that will help minimize interference. To test your car for interference, check how it does on AM when driving at different speeds, w A/C on, wipers on, etc. This will give you a rough idea of how the unit will perform in your car.

If you wish to inspect the unit more closesly, please email me, and I have much larger images I can email you.

Buyer pays Actual shipping and insurance, @ $5-$10. Money Order, or IESCROW acceptable. Buyer pays escrow fees where applicable.

Sent via Deja.com http://www.deja.com/
Before you buy.

2530. New Extra Class licenses!!!!

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-18 00:00:00 UTC
From: Innocent John!! <jmackey@NOpargSPAM.org>
Message-ID: <mJQg4.2280$_G1.35751@news1.sttls1.wa.home.com>
Source record: 121142

I believe there should be a end to the currect 1x2 & 2x1 Eextra class
call signs on April 15, 2000. Thus, there would be a way to know the
difference between real Extra Class holders who earned & proved their
abilities with difficult theory & faster morse code. There would be
a fairly clear way to recognize them as different & better than the
"Welfare Extras" starting the last half of April who have little skills
& abilities.

So where/what is the M.O. site?

>Furthermore, those of us who are thinking persons, unlike the majority
>of those who respond to my posts, will find this amusing:

It is amusing for the lack of any common sense.

>"In a related vein, the Board will hear the second installment of a
>report from ARRL Executive Vice President David Sumner, K1ZZ, on Amateur
>Radio in the year 2010 and beyond. Sumner's report will expand on one of
>the themes of his preliminary report delivered to the Board in July
>1999: voluntary certification programs to encourage continuing education
>and skills development by radio amateurs above and beyond the licensing
>requirements."

That should help satisfy those that need the ego self
gratification that comes to some that must have the
"paper certificate" to believe they are superior in some
way.

>There were too many licenses. There was no need for new Novices, or new
>Tech Pluses anymore. But get this, Extras. They destroy the licensing
>system with their "the sky is falling" panic, then propose this crap to
>sell even more books in the future, and cover up the fact they couldn't
>care less about the license structure. As if some home study crap they
>publish will compensate for the diminished federal test requirements.

I absolutely roll on the floor every time someone like
you places the "blame" on the ARRL. Seems the ARRL
did everything they could to keep the end result which
is now the actual R&O from happening. If you have
any belief at all that anyone (ARRL or any combination
of people and organizations) would retain code testing
at 13 and 20 wpm, then you have no clue at all.

>Excuse me, I have to go clean off my hip waders after wading through
>that announcement...

Let's see. The ARRL is damned because they
sell license manuals, and a lessoning of test

elements means a lessoning of sales of such manuals. That should mitigate complaints that ARRL is profit focused...BUT now that the ARRL recognizes that some people might want a special (non-FCC) certificate...well that's bad? Give me a break.

No cheers,
Bill K2UNK

Tram D201 in good condition, Unlocked VFO and manual $275

Johnson Messenger 250 Base, Astatic Golden Eagle D104 Mic like new condition in origianl box, $300.00

PDX400 eight tube 10 meter base amp, Brown with gold knobs and Browning Eagle on the front, looks very nice with a Browning. 700-1000 watts PeP, in good working order. $280.00 SOLD

Cobra CAM 88 Tube 23 channel base Working with a copy of the SAMS, no Mic but I have the hard to find mic connector. $70.00

Siltronics Model 90 -6 VFO, Good cosmetic and working condition $70.00

BBE 411 Rack mount Sonic Maximizer, Rack mount, 1/4" in and out, will work for voise or musical instruments $90.00

HomeBrew Meter, 20/200/2000 Watts. Reads forward and reverse wattage. Made from a
Goldline coupler and Large scale meter $25.00

ParaDynamics 3 Way, large scale meter, CB meter, switch between Power/Modulation and SWR. $40.00

Demco Modulator in good working condition with a Fentone Broadcast Style Dual crystal mic head mounted on a D104 G Stand. Works great, Nice smooth audio $200.00

Crown IC 150 Stereo Preamplifier, with paperwork $150.00

Motorola UHF Power amplifier Model N1275A 450-470 Mhz $50.00

Yaesu XF-32A SSB Crystal filter for the Yaesu FT101 $35.00

Bird 50-125 Mhz Slug, 5,000 Watt Peak/1,000W RMS $40.00

Bird 50-125 Mhz Slug, 10,000 Watt Peak/1,000W RMS $40.00

Realistic Navaho TRC 30A 23 Channel Base in good condition $40.00

Realistic cb Phone $25.00

HomeBrew 10 meter 3 tube amplifier, Uses 3 military 24 volt filiment versions of the
6146 tube (they are available from RF parts at a reasonable price) Fresh tubes ,
adjustable bias, adjustable input SWR tuning, Load/Plate/ SSB/AM 150 Watts + $150.00

Yaesu FTdx 560 10-80 meter SSB/CW transceiver, Excellent condition, Plastic still on the face, All tubes in excellent condition, Very Clean, with copy of manual $250.00

Gonset GSB 101 amplifier, uses four 811 tubes, Good condition, No internal TX/RX switching, Must be done externally using a Dow Key relay. Works excellent with copy of manual. Pick up only in So. Ca. $300.00

Icom IC230, 2 meter mobile transceiver 146-148 Mhz FM, intermittent VCO, comes out of lock easily, No time or interest for this project $30.00

Midland 79-290 Removeable face 40 channel SSB/AM mobile CB. A-F bands, Dual 2SC1969 final design $120.00

Palomar 225 Blue face amplifier in good condition, Set up class C $90.00

Penetrator 150 10-40 meter solid state mobile amplifier, with band switching and filtering, Class AB1 with removeable control head $175

Galaxy DX55 40 channel AM/FM/CW Export radio with extended coverage, Freq. counter, Connex Echo, 5 tone, Lots of swing at over 20 watts output $150.00 in great shape with original box.

Pics available for all items, Prices do not include shipping.
Items ship UPS ground after receipt of MO

| phil-news-nospam@ipal.net wrote:
|> Does anyone have a list of the known cliques in ham radio?
|
| Phil, someone told me a long time ago that a clique was something you
| didn't belong to. His point was that it is very easy to look at a group
| of people you think are doing something or enjoying something and think
| negatively of them because you aren't with them.
|
| The thing is, throughout life there are going to be groups you aren't
| associated with; not because they are excluding you, but because you
| aren't in them. People sometimes want to put a negative light on
| associations, but without them there isn't much fellowship.
|
| My advice would be to find some people you like or whose ideas you like
| and seek to join them and contribute. Then you won't have to worry about
| their *clique*; you'll be a part of it. One of the things you'll notice
| is that there is virtually never any organization or policy of exclusion
| in these groups you call cliques. Because it's a matter of perspective
| from the outside; negative perspective.
|
| Be positive. Do what you want to do. Never mind what you think some
| group may or may not be doing. If you're interested in what they are,
| join them. If you aren't, move on to something else.
|
| I've been in ham radio for a long time, and although there are groups to
| which I don't belong, and maybe even some I wish I did, I don't really
| think I could call them cliques. We just haven't gotten around to each
| other yet.

Nice words, but you totally missed the purpose of my question. I want to
know NOT for the purpose of joining any group or anything, but rather, for
the purpose of doing some analysis and study on the social groupings of
ham radio.

So maybe I should rephrase the question.

Does anyone have a list of known social groups in ham radio, besides those
which have formal organization?

That's what I meant by cliques.

2536. Why it is what it is!

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-18 00:00:00 UTC
From: n8wgm@aol.com
Message-ID: <20000118013519.02546.00001022@ng-cg1.aol.com>
Source record: 121148

The recent requirement changes for the FCC exams is in my opinion a
prelude to the loss of the uhf-vhf spectrum. The majority of hams are either
tech, tech plus or novice licensees. In order to move these people off of the
vhf and uhf spectrum, the FCC made it much easier for these people to get their
HF privaledges. By moving these people into the HF spectrum---the little used
uhf and vhf bands will be open and fair game for the commercial interests.
The federal communications commision cannot sell off the HF spectrum
for two very good reasons. First, the 10 to 160 meter bands are part of an
international agreement...they will be and remain in the future ham bands
because they are ham bands all over the world. Even if the FCC outlawed all US
hams on these bands.....they do not have any jurisdiction in the rest of the
world. Secondly--the HF bands are not very reliable----many times solar storms
and propagational problems plague the HF spectrum. 80 to 160 meters is not very
usefull during the day----and 10 to 20 meters is marginal at night. So there is
really no commercial interst in the HF spectrum other than short wave
broadcasters---as we all are aware of on 40 meters at night.
Now take the UHF and VHF spectrum and you have a whole new ball game.
These frequencies are most attractive to the commercial interests. Ideal for
sattelite communications---and the next generation of computers and cell phones
that have recievers to pick up the Internet anywhere in the world from those
sattelites and you have the making of a conspiracy to take over the UHF/VHF
portions of the ham bands. With the extra bandwidths needed for the cellular
phones and all the other money making ventures for these business interests
and the government's propensity to support business (because after all who
gives these politicians the most money to get re-elected?Can you say bribery?)
and you can see the writing on the wall.
And don't forget the manufacturers of ham equipment. Take a look at the
price of an HT or UHF VHF base rig. You can pick them up pretty cheap. No
real profit in there for the likes of Yeasu or Kenwood. But take a look at the
prices of the new HF rigs-------$1,000 and up. Lots of profit potential for
Kenwood and Yeasu--especially with all the new general class licensees tha
would flood into the HF market.
There is a move to stop this masacre of the ham bands---you can give your
opinion to the FCC in this matter by contacting the FCC at
<http//www.fcc.gov/e-file/ecfs.html>
This must be done before February 16, 2000.

N8WGM

Just because one can imagine that the writing _could_ be on the wall doesn't mean that the writing _is_ on the wall; and even if the writing _is_ on the wall doesn't mean what is written will _come to pass_.

If you're going to post in this manner, better have more than an opinion to back it up. For instance, where can any one of us go validate your claim? (And that doesn't include validation by merely pointing to yet another person's opinion.)

So, does the FCC have any information on this? Whose deadline is it?

I think we just found the "ass end" of Mike.

His story doesn't work - i.e., couldn't happen. Tech exams were never given by two Generals. He's probably thinking of the Novice exam - prior to folding it under the umbrella of the VE system. Today it would take 3 VE Generals, and another six pack and another pizza.

Well i dont know why willy wnats to do it but I modified my TS850S (by
clipping the relevant diode on the front PCB behind the front panel)
becuase i wanted to transmit on frequencies which were not available
as supplied. I also sometimes transmit on the UK amateur bands with my
class A callsign. No doubt Willy will find the info he wants soon. I
would willingly post it here but alas my meory is not so good and i
can't put my hands on my 850 manual at present.

Yours dx radio organisation and also we wish You all the
best in the future!

My name is Arunas Bagdonas. I a 28 years old lithuanian
man, I live in Lithuania,in Europe. I am a PC and Multimedia
student, and I am a senior manager of our established "DX
Club". My friends students (this Club members) are DX'ing
fans in Lithuania. But we have a problem : we have not the
information about frequencies and radio stations, dx news
etc. who is very valuable for us, students and DX radio
lovers...

So, we (our Club) asking Yours help : please,
help us, students, and if You can, send us free
shortwave Utility stations (air, marine, military)
frequency list (book orCD-ROM) and 2-3 latest
issues of Yours country DX magazines, please....

Please, do it for us, lithuanian students, maybe like a
humanistic aid !

We hope, that You will help us and send us frequency list
and dx magazines !
We (8 students) will wait the answer from You !

Our address:

Arunas BAGDONAS
c/o DX Cl.
RAMYBES 5-37
LT-4930 ANYKSCIAI
LITHUANIA,
Europe

Best greetings from Lithuania !

Sincerely Yours Arunas

2547. ICOM Users net 14.317 problem

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-18 00:00:00 UTC

Hi all! I've been trying to hear the Icom users net Sundays on 14.317 for some time but there is always a carrier slightly above the freq, (14.31716??) here in Dallas area. I have eliminated local interference, tried different radios and have also heard same tone on a trip to San Antonio Texas. Anyone else hear this signal or know the source?????

Thanks
Greg/N5SKE

I didn't vote for Clinton and am glad of it. Too bad he did win
without a majority. Just shows what Ross did to take the election
away from George Sr.

Unlike a real publishing business, the League can keep the prices low
and still generate some revenues over expenses. Unlike a real
publishing house, those revenues are not used to pay dividends to
stockholders, but are used to fund things that cannot and do not
generate revenues.

Leave it in SSB Filter position, that way you can inject the audio to
be transmitted. Try experimenting with the slope/notch, etc and adjust
your "center" frequency from the standard 1000cycle frequency, on the
PSK31 program. I'd suggest something around 1800 may do the trick.

To observe correct center frequency setup...simply watch the "tune"
display for equal noise on either side of the center spot.

Bob,

May I be the first (I think) to invite you to join us on 14.275.
Our "group", the Goodfellows and friends, have abandoned 14.313. The
only requirement is that you comport yourself as a gentleman and use
proper amateur radio practices. From knowing you these many years, I
have no doubt this will not be difficult for you.

Welcome back to amateur radio Bob.

Dan/W4NTI

2562. Re: The END of Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-18 00:00:00 UTC
From: Tim Lewallen <lewallen@netdot.com>
Message-ID: <B4A9FE55.3918%lewallen@netdot.com>
Source record: 121174
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy

All,

As a newbie to Amateur radio (I got my Technician ticket in November)
please allow me to add my two cents to this discussion.

I am 30 years old and I have been working as a Systems Engineer for a
computer company here in Texas.

I have always had an interest in Ham radio but never had the time to
dedicate to the hobby and frankly Morse didn't really float my boat.

My original intentions were to get the Tech class and stay there but after I
got involved with a local Ham group, ARRL and the local Skywarn chapter I
have reconsidered.

This hobby is quite interesting and most importantly - challenging. I am
looking forward to getting my brain wrapped around radio theory, antenna
design, etc.

I would think that each license level is an entrance to the next level of
operation - a stepping stone to greater things. Learning new things is what
keeps your mind sharp and your spirit excited. I know that is how I feel.
I love talking with the "old timers" and learning from them.

Don't get so wrapped up in the politics of the FCC that you lose site of a
fun hobby!

Replies and advice can be sent to KD5ING@hotmail.com

Thanks,
Tim Lewallen

Hi

Fritzel (Call DJ2XH?) died in 1998 I think

Now you get the antennas here in Germany from HOFI (have a look on)

And if all the celebrants were permitted, even encouraged, to
emphasize explicitly that these are celebrations by, about, and for
White people, then you would have a point.

Happy hamming,

Jeffrey Herman (jeffreyh@Hawaii.Edu) wrote:
[snip]
: During the 50s when SSB was finding its way into ham radio, there was no
: pub one could turn to to learn about this new mode except the League's SSB
: Manual. Also during that decade the FCC relaxed the regs regarding mobile
: operation - no one else published a mobile manual except the League
: (1955).

Jef, we've had this discussion on the NG;

Not true. I've already posted titles/authors of several books for amateurs
of that era that had information equivalent or better than the handbook.

One that imediately comes to mind is the Collins "Fundamentals of SSB"
book that is on my book shelf. CQ magazine had a "Technical Series" that
covered much the same material as many of the ARRL books. RCA had a series
of booklets called "Ham Tips" that were a combination of theory and
builders guides (and for -=FREE=- too!).

: To whom could you turn to for the great ideas and techniques that appear
: in the Hints and Kinks booklets? Propagation and antennas: The Antenna
: Manual. Who else in the 60s produced a VHF Manual? And when that VHF
: crowd began exploring FM: The FM and Repeater Manual. The very first
: book in the 80s devoted to amateur digital comms was the League's Get
: Connected.

CQ Magazine, "CQ Anthology I/II", "Understanding Microwaves", "Radio
Amateurs Mobile Handbook", "New Sideband Handbook" both by Bill Orr, VHF
Magazine, RCA, VHF Handbook, "VHF for the Radio Amateur", Collins Radio,
etc etc.

There were -many- publishing houses OTHER than the ARRL. Your loyalty to
the ARRL is comendable but inacurate. Sorry.

: Publishing affordable technical books was one of the original goals in the
: League's charter; for 85 years they've made information available to the
: layman that was nearly impossible to find elsewhere. How in the world
: could you possibly find fault with this business side of the League?

Well they are supposed to be "non-profit" ;-) Actually I find fault
with you implying they were the ONLY ones publishing books for hams.

: Every ham shack I've ever visited in the last 30 years has had many
: League pubs on its bookshelves. We are (or at least were) a group with
: a voracious appetite for reading and learning. Luckily, the League has
: been able to feed us what we most desired.

True, but have you visted a ham shack that was started in the 1940-50s
that STILL has the books that were used -then-? Many books NOT by the ARRL
will be found.

: Ham radio and reading are inseparable; and it takes a publishing business
: to do what the League has accomplished.

Agreed. But the ARRL isn't/wasn't the ONLY one! Try "RF Design Magazine",
lots of articles have ham calls in the bylines.

Ahem! What is your definition of "Low" Ed? There are several League publications that, when I walked into HRO, they told me to put up my hands, this was a robbery. :)

How about Halloween? Isn't that of Eur. white ancestry and a more stupid ghoulish event has never been invented. How about Christmas? It never was celebrated in the Middle East but did originate in Europe. And Easter too. How about Cheesehead Day in Green Bay to honor the Swiss whose claim to fame after 2000 years of peace is the cuckoo clock? Real geniuses those Alpine yodelers. Take a look in your encyclopaedias and I'll bet St..Valentine's Day was a white Eur. invention. Is the guy intimating that he's white European heritage and being discriminated against? I'm German-Austrian-Hungarian and I don't feel that way and furthermore when I see black Americans being able to honor a leader such as M.L.K., that tells me America's working fine. This is a land for ALL; it was designed that way and it must be kept that way. Our strength lies in our diversity and I'm white by chanceand so is every other white man or woman in the world. So get off your high horses, pompous arrogant and bigoted whiteys. We're in the minority in this world and don't forget it.

To the Clinton bashers I say this: you're ALL THE SAME. None of you ever gives credit to Clinton for anything positive that's happened here since Jan.20,1993 but every one of you would blame him for anything gone sour. It's the same garbage I've been hearing since day one out of the mouth of fatso Rush and copied by pea brains nationwide. Remember this: Clinton's been such an INEFFECTIVE Prez that Gore will be elected by promising to continue with specific programs Bill helped push through Congress.

Even though I say hello to the guys on 14.275, 14.313 has been my home since 1989 and I intend keeping it that way. There is no reason why Polly, "Badblood," Queenie the Weenie" and other assorted nuts and bolts should hold sway over my frequency, therefore I am asking if they will vacate immediately and QSY to allow me to show off my CLOUDWARMER.

I would expect a very small change, downward in frequency. The PVC has a higher dielectric constant than air, but there is more air around the wire than PVC.

BTW, how big is the square? Sound like a nice DF antenna.

Hi;

Repair shops / tube audio gurus / radio buffs take a look!

One lot of tube shields for the 9 pin miniature tubes (12ax7,
12au7...etc) these are the twist-lock spring-loaded type used in
radio and tube audio gear.

There are over 300 in the lot.

Stock up now!

Don't miss out on this one! Only 22 hours left to bid!

> existing band space for the existing analog cw mode?

Because it would work much better and provide far more
capacity in the same amount of spectrum ...
That doesn't constitute a proposal to ban the use of
conventional OOK Morse ... just a strawman design
for a system which could have the "look and feel"
(same user interface) as OOK Morse, yet work better.

What do you have against better?

I'm not going to argue bandplanning with you because
I don't really favor the segregation of modes by sub-bands.
Most of the nations of the world have no such arbitrary
balkanization of their bands ... they let the operators choose
their mode and frequency ... and the world doesn't seem
to have suffered from it ...

> >I have made mention of the fact that the FCC has mandated

> VHF/UHF is an entirely different topic.

Spectral efficiency is JUST as important at HF as at VHF/UHF,
perhaps even more so, since our HF bands are small by comparision
to the VHF/UHF bands.
```

> >Those comments were intended to stimulate

> meters and/or increase the value of ham radio to the public.

Technological changes could INDEED increase the number of people
using 2m ... for example, moving forward from antiquated, wasteful
FM repeater operations (which in a vast majority of cases lie idle
90%+ or the time to the exclusion of other uses) could greatly increase
the REAL utilization of the band ... the same applies to the other VHF/UHF
bands.

> In fact, a high level of spectral efficiency might bring the FCC to
> the conclusion that they can compress our space without any loss of
> our benefit to the public and therefore take the unnesessary space
> away fron us on that basis.

You're assuming that no uses will "fill the void" ... I think that's an
absurd conclusion ...

Wrong, it does take years for ECONOMIC POLICIES to have their effect. Something like what happened to Carter with the energy crisis was NOT a slow shift, it happened pratically overnight with fuel prices almost tripling in a several month period. American wages didn't raise to cover that in the same time period. No, that took many years. Now we look at gas as being fairly cheap again, 20 years of wages increasing while gas prices remained in the same window.
Give it about 4-5 years until the full impact of Clinton-nomics hits. It is already being felt in my area.
The areas largest employer had it's first lay-off, all of it's new growth is in Mexico and the Far East. A number of smaller companies have completely shutdown operations here. Due to either going to Mexico, or can't compete with foreign made goods. Hell, Clinton wants Communist China accepted (remember the Seattle demostrations???). Why, Big buisness wants the cheap practicaly slave labor of Red China.
Hell, if I am not mistaken with the exception of Greeneville TN there are no direct view, crt, TV's made in the US anymore. And Philips was going to shut that down (Philips has several huge TV plants in Warez, Mexico), but did sale it off to a company who wants to do contract electronics manufacturing.
Plus, look at your employment figures, most of the jobs are low paying retail and fast food. Why do you think there is such a problem with medical insurance. These types of jobs carry no benefets like medical. All of the higher paying and good benefet manufacturing jobs are leaving.
There is even a controversy brewing over computer jobs, management claims there are not enough software people available so they want to import them. However research done by professsional groups conclude that it is a scam to get cheaper labor. Ya know, students from other countries who don't want to go back, so will take an engineering job at not much more then minimum wage to stay in the country...

Let's remember that after all: "it's just a hobby", not your career. After all the discussions about ham radio being ruined, etc, you would think someone just lost an election.

Having monitored and participated in this Newsgroup for about a month, I noticed that very few who post here, can actually spell. As well it seems as most fail miserably in the grammatical composition of simple sentances.

I question whether or not the FCC changed the speed requirement do to poor spelling, figuring that slower speeds may provide more time for accuracy. What is 20 WPM if the other party cannot comprehend what you are saying? People not associated with amateur radio often ask " why do you call yourselves "hams"" The reason is: half of the radio community cannot spell

amatuer
amateur
amatuere
armature

Deer John (call sign) here is the resestor you rekrested, 500 ohm, 5% tolorance hope the finale you working on works good win youre done.
Cincerly tecnishion joe

I resemble these remarks...:-)

I believe the word that eluded your spell checker was "sentences" :)
But since I know what you meant it, perhaps it's not so important.

A kill File is a useless pice of trash. We can very easy bypass by using
different subject titles and different names. In time, your kill-file will
choak on itself and lock-up your program, hence defeating your efforts!

The phoney notion of a liberal press notwithstanding, the venal gore-loving press doesn't have the chance to report shovel mass-killings, though the opportunity arises too often to report gun mass-killings. When was the last time someone walked into a school or office and killed 10 people with a weapon other than a gun or a bomb?

You still didn't name any. State the name of a firm which has made
a bid on an amateur HF frequency.

Good solution. Let's arm teachers and allow school kids to carry
firearms. That's a world I want to live in.

I agree that drug prohibition has cause far more problems than it has solved.

One thing that will help the school shooting problem is to hold parents responsible for their children. This means, among other things, their access to guns. Columbine was unusual not only because of the number of shooters and the extent of the loss of life, but because the two shooters got at least some of their guns from the black market. Kip Kinkel and the shooters at Paducah and Pearl, among others, got their guns from their parents. They should be charged as accessories to the crimes their minor children have committed.

How about one of the biggest mass murder of recent times, where a guy went into a night club in New York with a can of gas and a book of matches ? New York's strict gun control didn't stop him, he just used another method. Until society decides to control the criminal regardless of his methods, nothing will change except the victims ability to defend themselves...

Gun control has created a hell of a lot more victims than it will ever save !

Ed is exactly right. If the League did not publish many of its
materials, these materials would simply not be available, since the
ham community is probably too small for a conventional publisher to
want to serve it. Sheesh, we'd all be criticizing the League if it
did NOT make license manuals, RFI handbooks, etc. available!

On 18 Jan 2000 16:50:31 EST, JEP <transoman#@yahoo.com> wrote:
>And why are the CD versions more money when cost should be much less?

While the reproduction cost of the CD is less that that of the printed book, those costs are a fraction of the retail price in either case. The reason the CDs cost more is that there is a cost associated with creating the CD master, and that cost is recovered over many fewer unit sales than are the costs for the printed book. That ratio is changing over time, which is one reason you see the CD price coming closer to the book price. (The Handbook CD price dropped by $10 this year.) If we sold as many CD units as book units -- if we sold even half as many -- the CD price would be lower than the book price.

I have to say I think you're wrong on that, Lloyd.

If we value the principle of free association, then no one should be forced, by trickery or by law, to read something he doesn't want to read.

Just as no one in amateur radio should be forced to listen to transmissions from jammers or unwanted stations commenting without being part of the QSO; and just as no one should be forced to hire a person he finds objectionable for any reason whatsoever.

So email and newsgroup filtering is a fine example of a tradition of the Old America, and one that should be reinvigorated: freedom of association.

And, after all, we all do filtering of a kind, merely by choosing what we will read. It's unavoidable, since no one can read everything.

On the other hand, those, like the "Anti"-Defamation League, who are attempting to get "hate" (read: thoughtcrime) filters placed on library computer terminals and preinstalled in home PCs are censors of the most contemptible kind.

With every good wish,

Kevin, WB4AIO.

Nope, don't arm children. But *properly training* and then arming
teachers who accept the responsibility would probably save lives.

Questionable prediction, I think, Will. If CW use diminishes, there will be a push to "re-farm" (ARRL term) significant portions of the CW spectra for use in SSB. Not my hope, but if band crowding in SSB portions happens with HF SSB licenses easier to earn, it seems a pretty obvious fix.

But all of this is guesswork. But I have trouble believing that the use of SSB spectra won't increase by more than 10%, while the CW spectra will be used less.

I don't want to ruffle too many feathers, (here it comes) after I got out of
the
Army--many years ago--a guy told me "vulgar language shows lack of
intelligence
and by that I mean that you could not think of anything else to say."
He sure hit nerve, and to this day I try and use what brain cells I have
left to make
my point without using vulgar terms.

Perhaps the numbers won't suit your purpose - but the day after the Columbine incident, and mental-case AUTOMOBILE driver crashed thru a pre-school fence purposely in an admitted effort to kill as many "innocent children" (his words!) as he possibly could - as I recall, he managed to kill one and injured many others. For SOME strange reason, our national media wasn't NEARLY as interested in covering that AUTO related murder as they were the one involving guns... Our local paper DOES ocassionally cover stories where alcohol and autos (2 of our country's GREATEST killers) were directly blamed for some deliberate attempted murder, as one driver tries to run over another in a fit of alcohol-induced rage...

Guess we need to work HARDER at car-control and banning...

A *LIE!*

Or at LEAST an intentional misrepresentation of FACT!

Those kids didn't "get guns from their parents", they BROKE INTO and STOLE them - one from a grandparent! LOTS different than the implication that the parents GAVE the kids the guns! One of the kids WAS an avid hunter - but the guns he used were kept locked when not in use.

If you are going to demonize GUNS used in these incidents, how about CARS? Should the PARENTS also be held responsible for the deaths and injuries, as well as property damage caused by their children? Why not - those CARS kill as many and MORE "innocent kids" than hated guns do! AHHH, but YOU own, drive and enjoy CARS - so aren't ABOUT to place restraints on THEM, ARE YOU!

Nothing like circumstantial ethics... Ban and demonize the stuff that WON'T affect ME, but DON'T touch the stuff *I* have any need for or interest in...

Dear om
if you can help me I`ll be happy :)

I have a Transceiver (Kenwood TS-140S)
But it is not work now

SYMPTOMS :

First time : good receive but audible alarm " UNLOCK "
with morse code time to time .

Now : - open display firs time (forexample 14.000.00)
- after opened display (like . . . . .)
- not receive also not any sound or hiss
- not transmit
- alarm " UNLOCK " with morse code repeatly .
- when I rotate Tuning knob display is open
like 14.230.00 but again . . . . . .after 1 second.

I measured 3.2V on back-up lithium battery .

If the CD price were lower than the book price, you likely *would* sell more
CDs than books. Demand elasticity is a function of price.

2644. Code Exam "Disability" Waivers

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-19 00:00:00 UTC
From: mf_luder@my-deja.com
Message-ID: <8652bdigo1@nnrp1.deja.com>
Source record: 121067
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

From CQ, paraphrasing FCC:

* The much-abused disability waiver for 13- and 20-wpm code tests is eliminated (since there will no longer be any 13- or 20-wpm code tests).

Well now, here's some typical "military intelligence" I didn't read until today in the FCC's Retort and Odor.
The code waiver is being abused, so less ditch the 13 and 20 wpm code tests... OK.

They did give a few other reasons, but this is the most stupid of the bunch.

It's like saying "everyone is failing the road test of a trucking exam, so we'll just make it a written, shall we ?"

* The changes will take effect on April 15, 2000. This will give the QPC time to create new exams, and will give publishers time to get new license manuals into print before the new structure is put into place. In addition, it will give tens of thousands of hams with partial credit toward one of the new license classes the opportunity to pass the remaining element(s) before the new tests begin, possibly requiring re-examination on certain topics.

They left out the part about the radio makers issuing limited new models until they had a "bigger" market... of course when they realize the "boom" (the ARRL will mention in the ARRL Letter this week has begun at test sessions already) will die as quick a death as the codeless Tech boom, they'll curtail manufacturing even faster.

What you're hearing is 4x the NTSC TV subcarrier frequency. Every
TV, and most computers, radiate it. Get your antenna well away from
TVs and computers, employ your notch filter, and it shouldn't be much
of a problem.

That's really nice, C.H., really nice. Did this guy also tell you, years ago,
that being an informed commenter would also lend credence to your intelligence?
I have just said, in an intelligent way, the same thing I could have said
thusly: You are an idiot for not knowing what it is you are commenting on.

The *way* I said it makes no reflection on how intelligent I am, probably more
how *emotional* I am about what I am saying.

By the way...the topic here WAS that Aaron thinks my callsign, W5TIT, is
vulgar. So, you see? I don't think there was ever even any vulgar language in
this thread... Maybe, for once, Aaron will even agree with me on that
one....probably not....

Actually, _Convoy_ was written and performed by CW McCall,
not Jerry Reed. (Jerry just played a truck driver in the Burt Reynolds
movie based, loosely, on that song.)

Yep, it is all the fault of that old devil CW.

And if BMWs were cheaper than Ford Escorts, they'd sell more
BMWs. Incrementalist pricing at its finest!

Your answer is oversimplistic (or maybe you don't understand
pricing models).

Pricing models are based on several factors, only one of which is
demand elasticity.

If you are refering to a scanner that receives vhf/uhf frequencies then
you are barking up the wrong tree. Amateur CW is done mainly on HF.

Hello, Roger,

Yes, the League would be criticized if it didn't make such material
available, but I disagree with the first part of your statement. Even
with the ARRL publising a lot of books, there is still a plethora of
good information available from other sources. Without "competition"
from the League pubs, other publishers would fill the gap.

Which ones, Rick? If you want a good comparison, go to the ARRL catalog (http://www.arrl.org/catalog) and compare the prices of books that ARRL publishes with the price of books published by others and re-sold by ARRL (RSGB, Noble, etc.)

Second that motion. I am within 6 months of qualifying to join QCWA (at age 43),yet I am a Tech Plus. HAve been a Tech since 1980. I have been active in VHF/UHF,am the owner of a UHF repeater,am a ARES/RACES operator and have been so for 20 years......different times I would dig out the Code Practice program and work up to about 10 wpm or so, but then I made my mistake.......I actually turned on the HF rig, and listened to all the Garbage on the upper end of 75 Meters....and lost all interest in upgrading.....AGAIN.....can someone explain to me why I would be more of a detriment to the hobby on HF than some of these southern fried crackers you hear on HF yelling about My frequency,and starting Flame wars on Usenet??

The "upper end of 75M" is but a small portion of the Amateur HF allocation.
Why do you insist that it is the standard for all Ham Radio to be compared to?
That band is the exception to Ham radio and not the rule. I was listening on
75M just last night and turned it off after about 10 mins of sex jokes and
personal put downs to other ops so I see your point but don't judge all the
bands by those losers.

Failing a road test? There not getting rid of the code requirement. It is still in affect but at the same 5wpm. Get over it. There is only one driving test and one written test to take if you want to be a driver. As for morse? There is still a written for beginners and still the initial 5wpm that everyone starts with. Whats the prob?

After I replied to Chip's initial post (thereby breaking the golden rule as laid out by my 3rd grade teacher, "READ everything before you DO anything."), I ran into other posts by him as well as some from the fellow that allegedly threatened him. Based on the direct quotes that Chip posted in a different thread, I personally thought you had to look pretty hard to see anything that could seriously be taken as a threat. Hopefully these gentlemen will reach a peaceful settlement (or simply ignore each other) so that we can all get back to talking about radios.

Mike

19 January 2000

Below is a summary of the threats to harm made by Rick Littlefield. Those who have expressed an interest can now see them directly and in context of time and subject.

I am grateful for the help from others in getting Mr. Littlefield to diffuse his focus on my harm.

Nathan 'Chip' Cohen
N1IR

The following is a summary of the threats to harm Dr. Nathan Cohen by Frederick Littlefield.

Pointing out the threats publicly has appeared to have had a positive effect, in that it has made Mr. Littlefield aware of the severity of his statements, although he is strongly in denial.

Dr. Cohen has decided to go to local and federal law enforcement should Mr. Littlefield make any more statements threatening him. He has also publicly suggested, although Mr. Littlefield has not complied, that Dr. Cohen and Mr. Littlefield have no interaction whatsoever, including responses to posts made by the other. This summary, when posted on USENET, is the last one made regarding Mr. Littlefield on USENET by Dr. Cohen.

SUMMARY OF THREATENING COMMENTS

In allusions to Nathan Cohen, Frederick Littlefield made the following statements: Both come from dialogue publicly posted on USENET between Thomas Rauch and Frederick Littlefield. Both are radio amateurs with callsigns W8JI and K1BQT respectively.

****
Re: Goodbye AOL
15 Jan 2000

< Can K1BQT help?>

"Yes I can, Tom. I know an established North End family with a unique approach for resolving libel claims for out-of-town clients. It's not cheap, but it's faster than the courtsâ€¦"

73

Rick K1BQT

****

AND

****
RE: CFA (Cross Field Antenna)
15 Jan 2000

<What do you think?>

If Gypsy Rose Lee turned an indecent occupation into a glamorous art form, Chip has surely done the opposite for antenna design. Could CFA mean "Chip's Final Act?â€¦"

Rick K1BQT

****

Both statements -made the same day--clearly refer to efforts to harm Nathan Cohen. The first refers to a "family" living in a section of Boston with historical links to organized crime; this "family" "resolves" libel claims outside of the court system, for a hefty price. This is a threat against Dr. Cohen designed to prevent him from pursuing legal action for stopping long-term harassment by Thomas Rauch against Dr. Cohen.

The second statement clearly refers to a "final act". Dr. Cohen is a scientist with 33 years of antenna building who is one of the prominent researchers in the field.of antenna design. Mr. Littlefield is stating that there is a "final act" to an ongoing profession for Dr. Cohen. Dr. Cohen has never given any indication that his work in this field is anything but ongoing. Thus we are asked to contemplate a means by which Dr. Cohen is terminated

It is important to note that motivation for such is presented by Mr. Littlefield. He asserts that Dr. Cohen is responsible for the destruction of an occupational field of endeavor, for which Dr. Cohen is well known to the public, into an "indecent occupation".

On 18 January, in another public USENET post between the two, Frederick Littlefield again refers to the 'North End ' reference to Thomas Rauch, confirming the that the intent is to harm Dr. Cohen, in an allusion to the breaking of knees by a "North-End family". Notice the change in wording from "family" to the single "surgeon"-a perversion of the harming of people by breaking their knees-- after Dr. Cohen expressed public fear of harmful intent by Mr. Littlefield:

****
Re: Death Threats
18 Jan 2000

On the 15thâ€¦ I see that I offered to put YOU [Thomas Rauch] in touch with the services of a fictitious North-End Boston knee surgeon to help YOU resolve YOUR libel problemâ€¦.

Rick K1BQT

****
No info is proffered as to why a surgeon from a "North-End family" would be in any way involved in resolving a libel case. The suggestion is now presented that Dr. Cohen can be harmed by having his knees broken, thus indicative of harmful intent.

You're FULL of it!

There are differing written AND driving tests depending on the CLASS
of driver's license you are applying for, AND the type vehicle you
expect to drive!

Do you REALLY think truck drivers face the SAME test, written OR
driving as mere CAR drivers?

Your OWN argument has just turned AGAINST you!

Fool...

The W8MMQ Wire

Welcome to the W8MMQ Wire for January 21, 2000! This newsletter is distributed each week, and is available free to all radio amateurs. If you would like to subscribe to the W8MMQ Wire, send your name and email address to w8mmq@email.com. Thanks!

Please feel free to pass this newsletter along to others. We encourage the free distribution of this newsletter to others, so long as credit is given in some way to W8MMQ. Thank you.

In this issue: The revised amateur radio question pool is coming soon; the ARRL buys Communications Quarterly; malicious interference is a new top priority for the FCC; and much more!

THE REVISED AMATEUR RADIO QUESTION POOL IS COMING SOON

W8MMQ - Drastic changes are coming to the amateur radio service on April 15, 2000, and with those changes comes a new question pool.

The Question Pool Committee of the National Conference of Volunteer Examiner Coordinators says that the new question pool could be out by February 1, or soon after. We will have more information on the new question pool, as it becomes available.

The changes to amateur radio include the elimination of the 13 and 20-WPM Morse code requirements, one of the most controversial topics throughout the ham radio community lately.

ARRL BUYS COMMUNICATIONS QUARTERLY

eHam.Net - In a letter from Mark Wilson, K1RO, ARRL Publications Manager, the following was announced:

The ARRL has purchased Communications Quarterly from CQ Communications and effective January 2000, "Communications Quarterly will be combined with ARRL's technical magazine, QEX."

The letter cites the financial woes of publishing a niche technical journal. "The market for technical publications of the calibre of Communications Quarterly and QEX is a loyal but small one, and the economics of publishing are such that it is difficult for such a small specialty magazine to break even."

The combined magazine will assume the publishing schedule of QEX, and will be published 6 times a year. It appears that the "Quarterly" name will be dropped and the new combined magazine will be called QEX but the letter does not state the name change explicitly.

As a charter subscriber, this writer is concerned that the same, independent, free-wheeling, in-depth, extended, technical articles, as well as the sometimes controversial opinion writing that Communications Quarterly has been known for, will continue. These characteristics distinguished Communications Quarterly from the balance of the Ham Radio media.

Communications Quarterly began as a "Ham Radio" Publication and later became a CQ Publication.

From eHam.Net and the ARRL, January 11, 2000

THE FCC SET TO VOTE ON LPFM SERVICE

W8MMQ - According to various sources within the FCC, and on the internet, the FCC is set to vote on a new, low-power FM radio service on January 20.

The proposed LPFM service will be for non-commercial use only, and will be limited to 100-watts or less. Antenna height will also be limited, to 98 feet or less.

This has been a controversial issue for quite some time. Those who operate "pirate" radio stations (often called microbroadcasters), feel that this latest development means that the airwaves are one step closer to being opened up for everyone. Those in the commercial radio industry are concerned that these new, smaller radio stations may shrink their potential listener base.

For complete information on the LPFM movement, be sure to visit http://www.concentric.net/~radiotv/. The site, provided by Rodger Skinner, is an excellent resource for anyone interested in LPFM.

MALICIOUS INTERFERENCE CASES A TOP PRIORITY FOR THE FCC

ARRL - As the latest batch of FCC correspondence reveals, malicious interference cases continue to comprise the bulk of amateur enforcement cases facing FCC Special Counsel for Amateur Radio Riley Hollingsworth. Recent allegations of deliberate and malicious interference have involved both HF and VHF/UHF operation. Here's a sampling:

On December 30, 1999, the FCC wrote Amateur Extra licensee Frederick J. Roll, NU5M, enclosing a tape recording it said was of a November 13, 1999, QSO between NU5M and KC1ZQ on 14.313 MHz that allegedly included harassing behavior. Hollingsworth said the tape was made by the FCC's High-Frequency Direction Finding Center in Columbia, Maryland. The FCC requested that Roll provide a full explanation of the transmissions and said his response would be used to determine what action the FCC would take in the matter. The FCC also set aside a recent vanity call sign grant to Roll, pending the outcome of the case.

The FCC put Amateur Extra licensee Arthur Visser, W9ART, on notice December 30 that it intends to designate his license for revocation if it learns of additional allegations of malicious interference by the licensee. The FCC says it's received "numerous complaints regarding malicious interference and jamming" apparently originating from Visser's station on 3.950 MHz, most recently on Christmas Eve. The FCC had issued Visser a Warning Notice January 8, 1999, regarding similar allegations. Hollingsworth told the ARRL January 6, 2000, that he and Visser had been in touch by telephone "in an effort to resolve the issues" that led to the FCC letter.

Meanwhile, the FCC wrote General licensee Jeffrey J. Pipenur, WA8IKW, in late December, setting aside his license renewal, granted last October 19. Hollingsworth told Pipenur that the FCC had monitoring evidence indicating that the licensee has "deliberately and maliciously interfered with radio operations of other amateur licensees on 3.865 MHz" last April 13 and 14 and last November 21. The FCC also has sent Pipenur tape recordings of his April 1999 transmissions and requested his response. "This matter will have to be resolved before we can make a decision on your renewal application," Hollingsworth told the licensee.

Hollingsworth told the ARRL that the FCC has received renewed allegations of VHF repeater interference in connection with Anthony J. Barben Jr, N2WNF, of Brooklyn, New York. In June 1997, Barben consented to a 15-month license suspension as part of an FCC effort to resolve a rash of interference cases in the New York City-Long Island area. The suspension followed accusations of willful and malicious interference, using obscene or indecent language and failure to identify. On December 28, 1999, the FCC requested that Barben retake his Technician class Amateur Radio examination under the supervision of FCC personnel by January 30, 2000.

Other repeater interference cases involved two stations in California. The FCC sent Advanced licensee Jensen W. Woods, AH6MX, a Warning Notice for alleged interference with the KC6OKA repeater system in the LA area. Another Warning Notice went out to Technician licensee Gary R. Dent, KE6JUV, for alleged interference to an ATV repeater.

Hollingsworth has said he plans to make more use of the FCC's High-Frequency Direction Finding Center to track down rulebreakers in the coming year. In addition, Hollingsworth now has enhanced monitoring tools at his Gettysburg office.

From the ARRL Letter, January 14, 2000

THE WEEKLY DX REPORT

Here is advance information of the activation of South and North Cook Islands. Peter, HB9BMY, will be active from the 27th of February until the 3rd of March from Aitutaki and Penrhyn, as ZK1XXC. These count as OC-083 and OC-082 towards the RSGB Islands on the Air awards programme. The operation from North Cook will depend upon the availability of flights. Peter will work CW only, near the IOTA frequencies 14.040, 21.040 and 28.040MHz. There will be no low-band and no WARC activities. QSL is direct to HB9BMY or via the bureau.

A useful list of stations currently active in Antarctica comes from The 59(9) DX Report:

R1ANF is active from Bellinghausen Base on King George Island, which counts as South Shetlands, AN-010 for IOTA. QSL is via RK1PWA.

R1ANZ and R1ANT are active from Mirny Base.

R1AND and R1ANL are active from Novolazarevskaya Base.

8J1RL is active from Showa Base on Ongul Island, counting as AN-015 for IOTA. QSL is via JARL.

FT5YG is active from Dumont d'Urville Base on Petrels Island, which counts as AN-017 for IOTA. QSL is via F5LBL.

KC4AAA is active from the South Pole.

EM1U is active from Vernadtsky Base on Galindez Island, which counts as AN-006 for IOTA. QSL is via UT7UA.

From RSGB News and 425 DX News

UPCOMING CONTESTS AND EVENTS

Visit the ARRL Contest Calendar at http://www.arrl.org/contests/ for more contest information.

The ARRL January VHF Sweepstakes, sponsored by the American Radio Relay League, will run from 1900-Z on January 22 through 0400-Z January 24. Operate 6 meters or higher. Visit http://www.arrl.org/contests/announcements/01vhfss.html, or see the December, 1999 QST, for more information on the contest.

The CQ World Wide 160-Meter DX Contest, CW portion, sponsored by CQ Magazine will run from 2200-Z January 28 until 1600-Z January 30 (phone portion will run from 2200-Z February 25 until 1600-Z February 27). Check out http://www.cq-amateur-radio.com/160rules99.html for more information.

The YL International QSO Party, CW portion, sponsored by YL International SSBers Inc., will run from 0000-Z January 29 to 2359-Z January 30 (SSB 0000-Z February 26 to 2359-Z February 27). Use general CW bands only.

If you know of an upcoming amateur radio contest or event, send it to w8mmq@email.com, and we will include it in this section. Be sure to send it at least a week in advance. Thanks!

AND ... IN CLOSING

Thanks for reading this edition of the W8MMQ Wire! This newsletter is produced and distributed each week by Dan, W8MMQ, and is available free to all radio amateurs.

Information from the following sources was used in the production of this newsletter: the ARRL Letter, RSGB News, eHam.Net, and other published reports.

An online edition of the newsletter is available at http://w8mmq.net/. All content on the W8MMQ.COM and W8MMQ.NET web sites is Copyright (C) 2000 by Daniel Hicks, Jr.

2670. Identifying Belden cable help needed

Newsgroup: rec.radio.amateur.misc
Date: 2000-01-19 00:00:00 UTC
From: Will White <kd7bfx@mindspring.com>
Message-ID: <38865AE0.38B0B169@mindspring.com>
Source record: 121093
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I have come by a large length of what appears to be Belden 2668 cable. I can't find that cable type in any of my catalogs or in the Belden on-line catalog. What I have appears little used, with gray PVC covering, about 0.5" in diameter, is terminated on both ends with 37-pin Centronics-type male connectors, and is marked thus: "Belden AWM STYLE 2668." Can anyone tell me what this cable is used for, and how much it costs (I probably want to sell it to someone who can use it)? The cable also has an inspection tag from what appears to be a vendor (Kertech in MA) that refers to "Part # LC37(7S)PP." Thanks.

I notice alot of posts about radios on "e-bay" I bought a radio there once.
I hear people say that you can get a radio at a good deal and some tell me
that you get ripped off too. Thoughts?

IMHO, both groups of people are correct. The rule for dealing with auctions is "caveat emptor" (let the buyer beware). When you find something you like, do a little research to try and determine what the current market rate is for the item in the condition described. Next factor in the "rarity" of the item and come up with a price you're willing to pay. The most important (and sometimes hardest) part is to promise yourself that you won't get caught up in "bidding fever" and go over this price.

I also like to check up on the seller. I'm a bit more wary of folks without a history of satisfied customers. Drop the seller an e-mail and ask for a phone conversation so you can feel them out and determine if you're comfortable sending them an unsecured money order. Thus far I've not had a bad experience buying or selling on auction sites, and I've picked up a few really sweet deals in the process.

Good luck!
Mike

The short answer is that you wouldn't. You sound like you would be a welcome addition to HF. I hope now that the code is within your reach you will QSY down. As far as I am concerned, the code was never the real issue in this interminable debate. The real issue was and is raising and holding a high standard of behavior on HF (and elsewhere). Mistakenly many have thought CW tests could or should accomplish this. I don't think Elements 1(b) and 1(c) ever were very effective "filters." Maybe a few bad eggs were kept off HF as a result, but far more people who would do no harm or be assets to the bands were kept off. I am not one of those who thinks the sky is going to fall after April 15. What we need is more FCC enforcement. Tests may be good for ensuring operator safety and competence, but they are not any substitute for enforcement and strong peer-pressure when it comes to jamming, profanity, and other forms of OTA malice. The nastiness has been there for a number of years. Where did it come from? Enforcement fell off and so did standards of what is considered acceptable behavior. The mess has resulted from an indifferent regulatory agency and from good ops who take the bait and encourage jammers and that lot by responding to their taunts et al.

Kip Kinkel's father bought him a Glock pistol and a Ruger 10-22 rifle (including a 50-round rotary magazine). The kid was supposed to pay his dad back over time, but in the case of the Glock at least he never did, and never would have had the money to buy it himself.

Yes, parents should be treated as accessories to the crimes their children commit when it is shown that they abdicated their responsibilities to ensure that their kids are mature, stable, and intelligent enough to handle whatever--guns, cars, matches, gummi-bears. This means that they keep up with what is going on in the kid's life, his emotional and mental state, their friends, school performance, etc. It also means proper instruction and limit setting. You know, just like parents used to do. Having done these things, that is all a parent can do, or can be expected to, and then should not be made to answer further. When a child misbehaves so extremely as to cause the death of another, I think it is reasonable to suspect that something is very wrong in their home life, and reasonable to investigate those circumstances. In so many cases kids do wrong, and it comes out that their parents did nothing to prevent, monitor, or intervene in the behavior. Parents have a responsibility to instruct, supervise, and control their children. We take custody away from parents whose neglect results in harm to their children. We should also take action against parents whose neglect results in harm to others. It is a reasonable standard of accountability and one that schools, employers, and government agencies are already subject to.

How are the changes going to lead to a decrease in CW use? That is the
part of the argument for code tests that I find least persuasive.
Compelling CW proficiency just isn't a very good way to promote use of
CW, and never has been since phone operation became commonplace. It is
begging the question to make the argument that since all hams who use CW
on HF had to pass a CW test, CW testing creates an interest in using the mode.

Sounds like the stuff that we used to use for the LV controllers for stage lighting. The control console and the dimmer packs were set up with 27, 37,or 53 pin QC's, and the trusses where already pre-wired. all you had to do was get 220 to the trusses, and then daisy-chain the controller cables from the stage box to the trusses. A larger version of the control 'snake' was routed along with the audio snakes to front-of-house where it was QC'd to the lighting control console.

the small chunk I have here is silver-colored jacket with 34 pairs of 26-gauge solid core.

It has been MY experience that going to a ham fest or swap meet --
purchasing an item -- usually untested is almost the same as eBay EXCEPT:

using eBay, your audience is huge
there is a feedback system with eBay -- just as there is with local swaps
(be careful of this guy -- this other guy is great-honest....)
my peeve ----- it hasn't eliminated, but is cutting into the predators that
prey on the widows of deceased hams. The word is getting out that the older
ham equipment is worth more than SOME estate hunters want to pay.

You are not alone! I can't hear them in Illinois on my Icom because all I
pick up is TV carrier interference. The net needs to move off 14.317.

Go buy yourself a MFJ -1025 or 1026 "Noise canceling signal enhancer".
It will elliminate the puter crap, and basically anything else that is
bugging you. (Except for the XYL of course).

The real question is....who care's what the cb guys/gals are gonna do?
If they want to play they have to pay. If not. Who cares.

2691. Parts for Mitrek uhf radio/PL info

Newsgroup: rec.radio.amateur.misc

Dennis
I can't help with the final. But, if you can
find a subaudible board HLN4181, you're in
business generating any PL tone you want. The
board is programmed with a resistor pack, but the
pack can be replaced with 100K resistors to give
any tone. See www.oregonvos.net/n7kmj/pl/
Do you by any chance know where I can learn
how to connect a HMN1014B dtmf mic to the Mitrek?
I think the mic came from a Syntor, has the same
square plug, but needs power.
Tnx, Bob K0BV

I renewed ONLINE!
Just answer the questions.

Whats with the downloading a form?

What's all this talk about secret erections! I think they should be ashamed of themselves.

With apologies to Rosanne Rosannadanna (Gilda Radner).

If you want to bash the targetted-publications market, look no further than the computer business (er, racket). All these companies are cranking out books of limited worth (most regurgitate the mother-vendor's documentation, e.g. Microsoft, and add little else) at $50 to $80 apiece. They auto-expire in 6-12 months because the next version of software comes out, making them obsolete. Aaakk!

This is BIG business. I am glad the ARRL books are so cheap. (Actually I did not buy many of them because the local library stocks them!).

>converts!

There are no more upgrades, the licenses will be given away to anyone with a
pulse and the ability to pass an open-book test. Therefore I predicted the
comming "vast wasteland."

But I also proposed a solution: All VE's either resign and give no new tests,
or modify their cw testing to require 1 min perfect copy plus 1 min perfect
sending by hand. You should go back and read the squeils of agony at the
thought of a meaningful cw test, even at 5wpm!
